USER MANUAL SUOTU PROTECTIONS

EN : READ THIS MANUAL BEFORE USING YOUR PROTECTIONS
Correct use and adjustment are particularly important for safety.
Parents should explain the information in this manual to their children or to anyone else who may not be able to understand it.

CE - EN14120

EN: These protections comply with Level 1 use - Protectors designed for normal non-competition use and range B (user with a weight of 25 kg to 50 kg).

USE : Products meeting the requirements of the technical specifications listed above are intended to reduce the severity or incidence of soft tissue injuries such as bruises, bruises, cuts and scrapes while playing roller sports. , like Scooter, skateboard or roller. These guards are not designed to provide protection in the event of a severe fall at speeds above 13 km / h and only provide limited protection in the event of low-speed impact on stationary hard surfaces. They do not protect the wearer in the event of a collision with moving vehicles. These protections are not suitable for motorcycles. Level 1 protections are not suitable for acrobatic roller sports Products meeting the requirements of technical specifications cannot significantly reduce serious injuries, such as serious fractures resulting from extreme impact forces or injuries related to twisting / bending / crushing, nor spinal neurological injuries. The materials and technologies currently available do not allow this level of protection to be achieved on products that are sufficiently comfortable to wear and which would allow physical activities to be performed satisfactorily.
All fasteners should be securely fastened, in order to still ensure maximum comfort. If hooks and tabs are used as fasteners, remove dirt first and check for abrasion to prevent the fastener from unraveling on its own. In the position they occupy, the protectors should always fit comfortably on the body. If the protection is not fitted properly and does not cover the target areas, another size should be considered. All protectors sold in pairs have a sewn-in label with the mark "LEFT" (left) or "RIGHT" (right) to indicate laterality. Please take this label into consideration when equipping yourself with these protections.

MARKING AND LABELING:
Each approved protection must bear a good mark helping you to know its range of use, the part of the body it concerns and the standards of protection to which it meets. This label should not be removed.

CLEANING:
Always follow the washing instructions printed on the label attached to the garments, because when using alternative fabrics that have specific performance characteristics, the washing instructions may change. The hook and loop fasteners should be dusted off with a nail brush. If the protective components have been soiled during use, wipe their surface with a damp cloth. Use a soft, damp brush to clean the perforations in the components. Use only tap water. Never use a cleaner or detergent, and never machine the protections because the product would be damaged by the cleaning process and by chemical agents, and its level of protection would be greatly reduced. Substances potentially applied to this product (solvents, cleaners, hair lotions, etc.) can cause damage invisible to the user and compromise the effectiveness and safety of your product. If in doubt, please contact the manufacturer before cleaning or machine washing your protection. Please always refer to the instructions written on your product label.

STORAGE AND TRANSPORT:
Place your product on a clean, dry surface, and store it in a dry, well-ventilated environment protected from direct sunlight and extreme temperatures. Do not expose it to temperatures below 5 ° C and above 50 ° C. We recommend that the product is not left outdoors or exposed to low temperatures before use. Do not place heavy objects on your product as this could damage fabrics and plastic materials. The protection provided by the product should not normally be affected by ambient temperatures and non-extreme weather conditions..

MAINTENANCE :
For maximum performance, your product should be inspected before each use. Stop using protection if one or several components show signs of deterioration or are worn, cracked, cracked and / or deformed, or if the interior padding has been deteriorated. It is recommended that the product be replaced every 3 years under normal use conditions, and a maximum of 5 years after the date of manufacture (see product label). If you experience a collision or if your product or any component shows signs damage, cracks, deformation and / or the interior padding is deteriorated, please replace it.
Please dispose of it in an environmentally friendly manner.
Do not drill holes, paint, cut, heat, bend, apply decals or stickers, or make any modifications to the guards, otherwise the effectiveness and the safety of your product could be compromised.

WARNING :
Your product is designed and manufactured to provide limited protection against injury in the event of an impact or fall. No protection can offer complete protection against injury. Therefore, please remember to use it in such a way
responsible and within the framework of your technical level and your capacities! Contamination or alteration of the protection, or improper use, would reduce the performance of the protection in a dangerous manner. Variations in environmental conditions, such as temperature, can reduce the performance of the protection.
