• Do not mix memory kits. Memory kits are sold in matched kits that are designed to run together as a set. Mixing memory kits will result in stability issues or system failure.

• Memory kits will boot at the SPD speed at default BIOS settings with compatible hardware.

MEMORY OVERCLOCKING PROFILE

• XMP/EXPO, enable XMP/EXPO over-
 clocking in BIOS. For more information, please visit www.gskill.com.

• XMP/EXPO over-clocking speed is not guaranteed. Performance may vary and capability of the memory is dependent on the motherboard and system. Recommendations will result in system or motherboard failure. For more information or manufacturer support, please visit support@gskill.com.
