Stickerless design

We have made this puzzle compatible to be produced in the popular bright stickerless color scheme.

Small inner circle combines with big round design

Smaller inner circle design makes the cube more controllable and light, with the combination of big round edges brings a better corner-cutting and comfortable turning feel.

Round hole design

Round hole design decreases friction and lock-up

Stable Structure

Professional inner structure improves the cube's overall performance, which makes the cube more stable.

Higher central pole

Higher central pole brings stable center piece performance and outstanding corner-cutting.

Anti-sticky track on friction surface

Lots of grooves on the surfaces of edges and other parts of the cube highly reduce impact surfaces to make the cube turn faster.
