Control the plate temperatures separately

The Digital Grill Master Pro has all the features on a contact grill you could think of, and a few more! You will be able to create the perfectly-browned grilled sandwiches by fine-tuning the temperature with the adjustable thermostats. You can even adjust the temperature of the grill plates separately for a perfect result.

Large baking surface

The contact grill has a sturdy cool-touch handle and can be safely opened up to 180°, making both sides of the contact grill touch the kitchen counter or table. This effectively doubles the grilling surface and, added to this, the plates are removable and can be cleaned easily and safely.

Easy to read LED display

With all the features this contact grill has, the high-end LED display definitely comes in handy. You will be able to track the time and temperatures on the same display for both plates simultaneously. This means, you can read all settings in the blink of an eye and adjust them accordingly.

Easy to use and clean

The removable plates are dishwasher-safe and therefore easy to clean making them a lot more durable. The grill is also made of sturdy materials, contains a cord storage, and is equipped with non-slip feet. You can therefore expect this device to last a long time if properly cared for.
