

INSTRUCTIONS:

1. Completely fill the tub with warm water (The temperature of the water should not exceed 85°C / 185°F)
2. Usually within 30-60 seconds the water will become very foamy. Stirring the water with a brush or a sponge will help to create more foam. However, please do not use the brush or sponge to scrub the tub.
3. When the tub is completely foamy, spray the brush or sponge with the foam and scrub the tub.
