User Manual
2 CH & 4 CH
Digital Storage Oscilloscopes

Table of Contents

NOTE :

This series of oscilloscopes offers a variety of models with many different features and specifications. This manual also describes these functions for models that may not match the features of your model. For detailed information on the built-in features of each model, see the technical specifications.

1. Satefy precautions

- **This product complies with the requirements of the following European Community Directives: 2014/30/EU (Electromagnetic Compatibility) and 2014/35/EU (Low Voltage) as amended by 2004/22/EG (CE-Marking). Overvoltage category II; pollution degree 2.**
- **To ensure safe operation of the equipment and eliminate the danger of serious injury due to short-circuits (arcing), the following safety precautions must be observed. Damages resulting from failure to observe these safety precautions are exempt from any legal claims whatever.**
- **Do not use this instrument for high-energy industrial installation measurement.**
- **Do not place the equipment on damp or wet surfaces.**
- **Do not exceed the maximum permissible input ratings (danger of serious injury and/or destruction of the equipment).**
- **The meter is designed to withstand the stated max voltages. If it is not possible to exclude without that impulses, transients, disturbance or for other reasons, these voltages are exceeded a suitable presale (10:1) must be used.**
- **Disconnect test leads or probe from the measuring circuit before switching modes or functions.**
- **Check test leads and probes for faulty insulation or bare wires before connection to the equipment.**
- **To avoid electric shock, do not operate this product in wet or damp conditions.**
- **Conduct measuring works only in dry clothing and rubber shoes, i. e. on isolating mats.**
- **Never touch the tips of the test leads or probe.**
- **Comply with the warning labels and other info on the equipment.**
- **The measurement instrument is not to be to operated unattended.**
- **Do not subject the equipment to direct sunlight or extreme temperatures, humidity or dampness.**
- **Do not subject the equipment to shocks or strong vibrations.**
- **Do not operate the equipment near strong magnetic fields (motors, transformers etc.).**
- **Keep hot soldering irons or guns away from the equipment.**
- **Allow the equipment to stabilize at room temperature before taking up measurement (important for exact measurements).**
- **Do not input values over the maximum range of each measurement to avoid damages of the instrument.**
- **Periodically wipe the cabinet with a damp cloth and mid detergent. Do not use abrasives solvents.**
- **The meter is suitable for indoor use only**
- **Warning:**
- **To avoid fire or electrical shock, when the oscilloscope input signal connected is more than 42V peak (30Vrms) or on circuits of more than 4800VA, please take note of below items:**
  -Only use accessory insulated voltage probes and test lead.-
  Check the accessories such as probe before use and replace it if there are any damages.-
  Remove probes, test leads and other accessories immediately after use.
  -Remove USB cable which connects oscilloscope and computer.
  -Do not apply input voltages above the rating of the instrument because the probe tip voltage will directly transmit to the oscilloscope. Use with caution when the probe is set as 1:1.
- **Do not use exposed metal BNC or banana plug connectors.**
- **Do not insert metal objects into connectors.**

2. Safety Terms and Symbols

Safety Terms

Terms in this manual. The following terms may appear in this manual:

⚠ **Warning:** Warning indicates the conditions or practices that could result in injury or loss of life.

⚠ **Caution:** Caution indicates the conditions or practices that could result in damage to this product or other property.

Terms on the product. The following terms may appear on this product:

Danger: It indicates an injury or hazard may immediately happen.

Warning: It indicates an injury or hazard may be accessible potentially.

Caution: It indicates a potential damage to the instrument or other property might occur.

Safety Symbols

Symbols on the product. The following symbol may appear on the product:

⚠ Hazardous Voltage   ⚠ Refer to Manual

⏚ Protective Earth Terminal   ⏚ Chassis Ground

⏚ Test Ground

To avoid body damage and prevent product and connected equipment damage, carefully read the following safety information before using the test tool. This product can only be used in the specified applications.

⚠ **Warning:**

The four channels of the oscilloscope are not electrically isolated. The channels should adopt a common ground during measuring. To prevent short circuits, the 2 probe grounds must not be connected to 2 different non-isolated DC levels.

The diagram of the oscilloscope ground wire connection:
The diagram of the ground wire connection when the battery-powered oscilloscope is connected to the AC-powered PC through the ports:
It is not allowed to measure AC power when the oscilloscope is AC powered, or when the battery-powered oscilloscope is connected to the AC-powered PC through the ports.

⚠ Warning:

To avoid fire or electrical shock, when the oscilloscope input signal connected is more than 42V peak (30Vrms) or on circuits of more than 4800VA, please take note of below items:

- **Only use accessory insulated voltage probes and test lead.**

- **Check the accessories such as probe before use and replace it if there are any damages.**

- **Remove probes, test leads and other accessories immediately after use.**

- **Remove USB cable which connects oscilloscope and computer.**

- **Do not apply input voltages above the rating of the instrument because the probe tip voltage will directly transmit to the oscilloscope. Use with caution when the probe is set as 1:1.**

- **Do not use exposed metal BNC or banana plug connectors.**

- **Do not insert metal objects into connectors.**

3. Quick User Guidebook

This chapter deals with the following topics mainly:

● Introduction to the structure of the oscilloscope

● Introduction to the user interface

● How to implement the general inspection

● How to implement the function inspection

● How to make a probe compensation

● How to set the probe attenuation coefficient

● How to use the probe safely

● How to implement an self-calibration

● Introduction to the vertical system

● Introduction to the horizontal system

● Introduction to the trigger system

● Touchscreen Controls (Touchscreen is optional)

● Magnifier Function (Only for specific models with touchscreen)

Introduction to the Structure of the Oscilloscope

This chapter makes a simple description of the operation and function of the front panel of the oscilloscope, enabling you to be familiar with the use of the oscilloscope in the shortest time.

Front Panel

The front panel has knobs and function buttons. The 5 buttons in the column on the right side of the display screen or in the row under the display screen are menu selection buttons, through which, you can set the different options for the current menu. The other buttons are function buttons, through which, you can enter different function menus or obtain a specific function application directly.
Figure 3-1 Front panel

1. Display area
2. Select the right menu item
3. Control (button and knob) area
4. Probe Compensation: Measurement signal (3.3V/1kHz) output.
5. Input connectors of four channels
6. Remove the left and right menu
7. Select the bottom menu item
8. Copy button: You can save the waveform by just pressing this button in any user

5

interface.

9. **USB Host port:** It is used to transfer data when external USB equipment connects to the oscilloscope regarded as "host device". For example: Saving the waveform to USB flash disk needs to use this port.

10. Power on/off

Rear Panel
Figure 3-2 Rear Panel

1. Handle
2. Air vents
3. Input terminals of multimeter (optional)
4. AC power input jack
5. Fuse
6. **Foot stool**: Adjust the tilt angle of the oscilloscope.
7. **VGA port:** To connect the oscilloscope with a monitor or a projector as VGA output (optional).
8. **LAN port**: the network port which can be used to connect with PC.
9. **USB Device port:** It is used to transfer data when external USB equipment connects to the oscilloscope regarded as "slave device". For example: to use this port when connect PC to the oscilloscope by USB.
10. **Lock Hole**: You can lock the oscilloscope to a fixed location using the security lock (please buy it yourself) to secure the oscilloscope.
11. **Trig Out(P/F)** port: Trigger signal output & Pass/Fail output, also can be used as the port of CH2 Output of dual-channel waveform generator (optional). The output type can be set on the menu (Utility menu→Output→Output).
12. **Out 1** port: Output (single-channel) or CH1 Output (dual-channel) of waveform generator (optional).

Control Area 2 CH
Figure 3-4 Control Area Overview

1. Function button area: Total 11 buttons

2. Waveform generator controls (depending on model)

or

DAQ: Data Acquire, **P/F:** Pass/Fail, **W.REC:** Waveform Record

3. Trigger control area with 2 buttons and 1 knob.

The Trigger Level knob is to adjust trigger voltage. Other 2 buttons refer to trigger system setting.

4. Horizontal control area with 1 button and 2 knobs.

"HOR" button refer to horizontal system setting menu, "Horizontal Position" knob control trigger position, " Horizontal Scale" control time base.

5. Vertical control area with 3 buttons and 4 knobs.

"CH1" and "CH2 " correspond to setting menu in CH1 and CH2, "Math" button refer to math menu, the math menu consists of six kinds of operations, including CH1-CH2, CH2-CH1, CH1+CH2, CH1*CH2, CH1/CH2 and FFT. Two "Vertical Position" knob control the vertical position of CH1/CH2, and two "Scale" knob control voltage scale of CH1, CH2.

6. Default: Call out the factory settings.

7. Print

8. Counter: Turn on/off the Counter.

9. DMM (optional) or **Snapshot**

10. Direction key: Move the cursor of the focused parameter.

11.M knob(Multipurpose knob): when a symbol appears in the menu, it indicates you can turn the **M** knob to select the menu or set the value. You can push it to close the menu on the left and right.

Control Area 4 CH

Figure 3-3 Control Area Overview

1. **Function button area**: Total 11 buttons

2. **Waveform generator controls (optional)**
   or
   DAQ: Multimeter Recorder (see "*Multimeter Recorder*" on P104)
   P/F: Pass/Fail (see "*Pass/Fail*" on P76)
   W.REC: Waveform Record (see "*How to Record/Playback Waveforms*" on P66)

3. **Trigger control area** with 2 buttons and 1 knob.

   The Trigger Level knob is to adjust trigger voltage. Other 2 buttons refer to trigger system setting.

4. **Horizontal control area** with 1 button and 2 knobs.

   "HOR" button refer to horizontal system setting menu, "Horizontal Position" knob control trigger position, "Horizontal Scale" control time base.

5. **Vertical control area** with 5 buttons and 2 knobs.

   CH1 - CH4 buttons correspond to setting menu in CH1 - CH4. "Math" button provides access to math waveform functions (+, -, ×, /, FFT, user function, digital filter). The "Vertical Position" knob control the vertical position of current channel, and the "Scale" knob control voltage scale of current channel.

6. **Default**: Call out the factory settings.

   Print: Print an image of what appears on the oscilloscope screen.

   Decode(optional): Turn on/off Decode function.

   DMM (Multimeter, optional) or **Snap** (Shortcut button for measurement snapshot)

7. **Direction key:** Move the cursor of the focused parameter.

8. **M** knob (Multipurpose knob): when a ![M] symbol appears on the menu, it indicates you can turn the **M** knob to select the menu or set the value. You can push it to close

the menu on the left and right.

User Interface Introduction
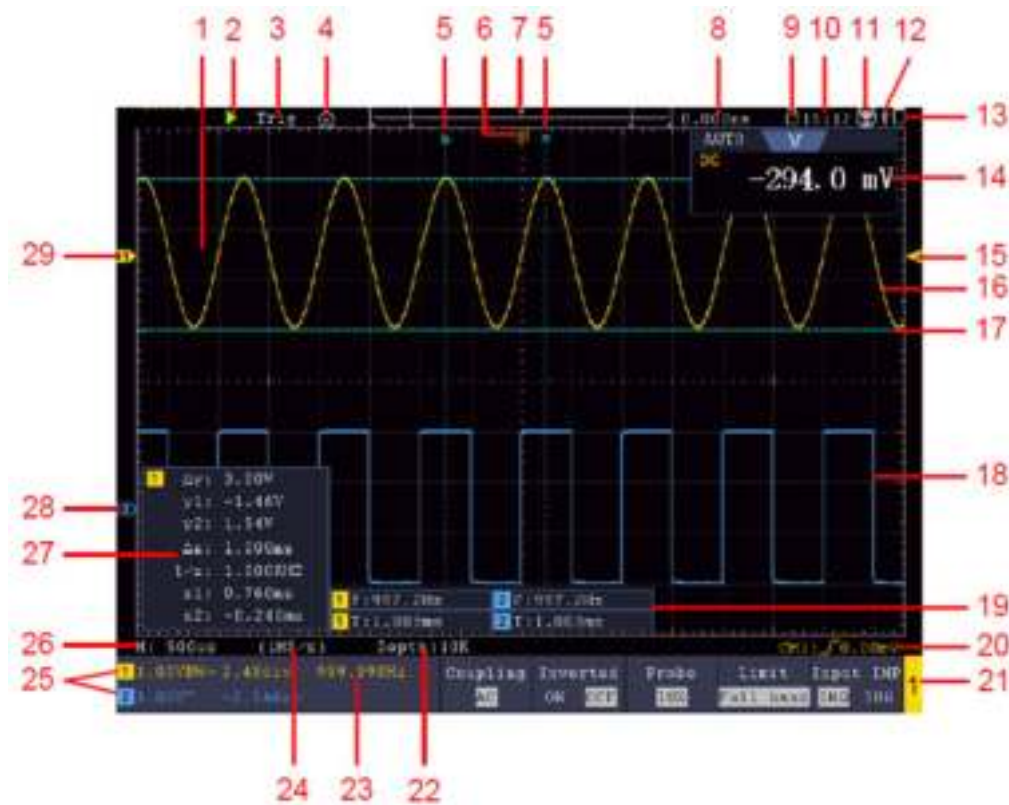

Figure 3-4 Illustrative Drawing of Display Interfaces

1. Waveform Display Area.
2. Run/Stop (touchable on touchscreen) (see "*How to Use Executive Buttons*" on P89)
3. The state of trigger, including:

   Auto: Automatic mode and acquire waveform without triggering.

   Trig: Trigger detected and acquire waveform.

   Ready: Pre-triggered data captured and ready for a trigger.

   Scan: Capture and display the waveform continuously.

   Stop: Data acquisition stopped.
4. Click to auto set (only for touchscreen).
5. Turn on/off the magnifier function (Only for specific models with touchscreen).
6. The two blue dotted lines indicates the vertical position of cursor measurement.
7. The pointer indicates the trigger position in the record length.
8. The T pointer indicates the horizontal position for the trigger.
9. It shows present triggering value and displays the site of present window in internal memory.

8

10. Touchable icon is to enable (🔓) or disable (🔒) the touchscreen controls (only for touchscreen).

11. It shows setting time (see "*Config*" on P74).

12. WI-FI is activated.

13. It indicates that there is a USB disk connecting with the oscilloscope.

14. Indicating battery power status (see "*Display*" on P75).

15. Multimeter window.

16. The waveform of CH1.

17. The pointer shows the trigger level position of the source in trigger menu.

18. The two blue dotted lines indicate the horizontal position of cursor measurement.

19. The waveform of CH2.

20. The waveform of CH3.

21. The waveform of CH4.

22. The frequency of the trigger signal.

23. The icon shows the selected trigger type, e.g. ⌐ represents triggering on the rising edge for an Edge trigger. The reading shows the trigger level value of the corresponding channel.

24. Click to show/hide the touchable shortcut menu (only for touchscreen).

25. It indicates the measured type and value of the corresponding channel. "**T**" means period, "**F**" means frequency, "**V**" means the average value, "**Vp**" the peak-peak value, "**Vr**" the root-mean-square value, "**Ma**" the maximum amplitude value, "**Mi**" the minimum amplitude value, "**Vt**" the Voltage value of the waveform's flat top value, "**Vb**" the Voltage value of the waveform's flat base, "**Va**" the amplitude value, "**Os**" the overshoot value, "**Ps**" the Preshoot value, "**RT**" the rise time value, "**FT**" the fall time value, "**PW**" the +width value, "**NW**" the -Width value, "**+D**" the +Duty value, "**-D**" the -Duty value, "**PD**" the Delay A->B↧ value, "**ND**" the Delay A->B↥ value, "**TR**" the Cycle RMS, "**CR**" the Cursor RMS, "**WP**" the Screen Duty, "**RP**" the Phase A->B↧, "**FP**" the Phase A->B↥, "**+PC**" the +Pulse count, "**-PC**" the - Pulse count, "**+E**" the Rise edge count, "**-E**" the Fall edge count, "**AR**" the Area, "**CA**" the Cycle area.

26. The readings show the record length.

27. The readings show current sample rate.

28. The readings indicate the corresponding Voltage Division of the channels. "BW" indicates bandwidth limit.

    The icon shows the coupling mode of the channel.

    "—" indicates direct current coupling

    "∼" indicates AC coupling

    " ⏚ " indicates GND coupling

29. The reading shows the setting of main time base.

30. The green pointer indicates the grounding datum point (zero point position) of the waveform of the CH1 channel.

31. The orange pointer indicates the grounding datum point (zero point position) of

the waveform of the CH1 channel.

32. It is cursor measure window, showing the absolute values and the readings of the cursors.

33. The blue pointer indicates the grounding datum point (zero point position) of the waveform of the CH1 channel.

34. The yellow pointer indicates the grounding datum point (zero point position) of the waveform of the CH1 channel.

How to Implement the General Inspection

After you get a new oscilloscope, it is recommended that you should make a check on the instrument according to the following steps:

1. **Check whether there is any damage caused by transportation.**
   If it is found that the packaging carton or the foamed plastic protection cushion has suffered serious damage, do not throw it away first till the complete device and its accessories succeed in the electrical and mechanical property tests.

2. **Check the Accessories**
   The supplied accessories have been already described in the "Appendix A: Enclosure" of this Manual. You can check whether there is any loss of accessories with reference to this description. If it is found that there is any accessory lost or damaged, please get in touch with the distributor of PeakTech responsible for this service or the PeakTech local offices.

3. **Check the Complete Instrument**
   If it is found that there is damage to the appearance of the instrument, or the instrument can not work normally, or fails in the performance test, please get in touch with the PeakTech distributor responsible for this business or the PeakTech local offices. If there is damage to the instrument caused by the transportation, please keep the package. With the transportation department or the PeakTech distributor responsible for this business informed about it, a repairing or replacement of the instrument will be arranged by the PeakTech.

How to Implement the Function Inspection

Make a fast function check to verify the normal operation of the instrument, according to the following steps:

1. **Connect the power cord to a power source. Long press the ⏻ button on the bottom left of the instrument.**

The instrument carries out all self-check items and shows the Boot Logo. Push the **Utility** button, select **Function** in the bottom menu. Select **Adjust** in the left menu,

select **Default** in the bottom menu. The default attenuation coefficient set value of the probe on the menu is 10X.

2. **Set the Switch in the Oscilloscope Probe as 10X and Connect the Oscilloscope with CH1 Channel.**

   Align the slot in the probe with the plug in the CH1 connector BNC, and then tighten the probe with rotating it to the right side.

   Connect the probe tip and the ground clamp to the connector of the probe compensator.

3. **Push the Autoset Button on the front panel.**
   The square wave of 1 KHz frequency and 3.3V peak-peak value will be displayed in several seconds (see *Figure 3-5*).
Figure 3-5 Auto set

Check CH2, CH3 and CH4 by repeating Step 2 and Step 3.

How to Implement the Probe Compensation

When connect the probe with any input channel for the first time, make this adjustment to match the probe with the input channel. The probe which is not compensated or presents a compensation deviation will result in the measuring error or mistake. For adjusting the probe compensation, please carry out the following steps:

1. Set the attenuation coefficient of the probe on the menu as 10X and that of the switch in the probe as 10X (see "*How to Set the Probe Attenuation Coefficient*" on P12), and connect the probe with the CH1 channel. If a probe hook tip is used, ensure that it keeps in close touch with the probe. Connect the probe tip with the signal connector of the probe compensator and connect the reference wire clamp with the ground wire connector of the probe connector, and then push the

11

Autoset button on the front panel.

2. Check the displayed waveforms and regulate the probe till a correct compensation is achieved (see *Figure 3-6* and *Figure 3-7*).

Overcompensated   **Compensated correctly**   **Under compensated**

Figure 3-6 Displayed Waveforms of the Probe Compensation

3. Repeat the steps mentioned if needed.
Figure 3-7 Adjust Probe

How to Set the Probe Attenuation Coefficient

The probe has several attenuation coefficients, which will influence the vertical scale factor of the oscilloscope.

To change or check the probe attenuation coefficient on the menu of oscilloscope:

(1) Push the function menu button of the used channels (**CH1 - CH4** button).

(2) Select **Probe** in the bottom menu; select **Attenu** in the right menu, turn the **M** knob to select the proper value corresponding to the probe.

This setting will be valid all the time before it is changed again.

> ⚠ **Caution:**
> The default attenuation coefficient of the probe on the instrument is preset to 10X.
> Make sure that the set value of the attenuation switch in the probe is the same as the menu selection of the probe attenuation coefficient in the oscilloscope.

The set values of the probe switch are 1X and 10X (see *Figure 3-8*).
Figure 3-8 Attenuation Switch

⚠ **Caution:**

When the attenuation switch is set to 1X, the probe will limit the bandwidth of the oscilloscope in 5MHz. To use the full bandwidth of the oscilloscope, the switch must be set to 10X.

Identify the Probe Attenuation Coefficient Automatically

The oscilloscope can identify the probe attenuation coefficient of the 100:1 (impedance 5K±20%) or 10:1 (impedance 10K±20%) probe with the identifying pin. When you attach the probe, the oscilloscope set the attenuation automatically on the oscilloscope vertical menu for the channel to match the probe.

For example, if you attach a 10:1 probe with the identifying pin, the screen will prompt "The probe attenuation factor is X10", and set the attenuation to 10X automatically on the oscilloscope vertical menu for the channel.

How to Use the Probe Safely

The safety guard ring around the probe body protects your finger against any electric shock, shown as *Figure 3-9*.
Figure 3-9 Finger Guard

⚠ **Warning:**

To avoid electric shock, always keep your finger behind the safety guard ring of the probe during the operation.

To protect you from suffering from the electric shock, do not touch any metal part of the probe tip when it is connected to the power supply.

Before making any measurements, always connect the probe to the instrument and connect the ground terminal to the earth.

How to Implement Self-calibration

The self-calibration application can make the oscilloscope reach the optimum condition rapidly to obtain the most accurate measurement value. You can carry out this application program at any time. This program must be executed whenever the change of ambient temperature is 5℃ or over.

Before performing a self-calibration, disconnect all probes or wires from the input connector. Push the **Utility** button, select **Function** in the bottom menu, select **Adjust**. in the left menu, select **Self Cal** in the bottom menu; run the program after everything is ready.

Introduction to the Vertical System

As shown in *Figure 3-10*, there are a few of buttons and knobs in **Vertical Controls**. The 4 channels are marked by different colors which are also used to mark both the corresponding waveforms on the screen and the channel input connectors. Press one of the channel buttons to open the corresponding channel menu, and press again to turn off the channel.
Press the **Math** button to display the math menu in the bottom. The pink M waveform appears on the screen. Press again to turn off the math waveform.

The 4 channels use the same **Vertical Position** and **Vertical Scale** knobs. If you want to set the vertical scale and vertical position of a channel, please press CH1, CH2, CH3 or CH4 at first to select the desired channel. Then turn the **Vertical Position** and **Vertical Scale** knobs to set the values.

Figure 3-10 Vertical Control Zone

The following practices will gradually direct you to be familiar with the using of the vertical setting.
1. Press CH1, CH2, CH3 or CH4 to select the desired channel.

2. Use the **Vertical Position** knob to show the selected channel waveform in the center of the waveform window. The **Vertical Position** knob functions the regulating of the

vertical display position of the selected channel waveform. Thus, when the **Vertical Position** knob is rotated, the pointer of the earth datum point of the selected channel is directed to move up and down following the waveform, and the position message at the center of the screen would change accordingly.

Measuring Skill

If the channel is under the DC coupling mode, you can rapidly measure the DC component of the signal through the observation of the difference between the wave form and the signal ground.

If the channel is under the AC mode, the DC component would be filtered out. This mode helps you display the AC component of the signal with a higher sensitivity.

Vertical offset back to 0 shortcut key

Turn the **Vertical Position** knob to change the vertical display position of the selected channel, and push the position knob to set the vertical display position back to 0 as a shortcut key, this is especially helpful when the trace position is far out of the screen and want it to get back to the screen center immediately.

3. Change the Vertical Setting and Observe the Consequent State Information Change.

With the information displayed in the status bar at the bottom of the waveform window, you can determine any changes in the channel vertical scale factor.

Turn the **Vertical Scale** knob and change the "Vertical Scale Factor (Voltage Division)" of the selected channel, it can be found that the scale factor of the selected channel in the status bar has been changed accordingly.

Introduction to the Horizontal System

Shown as *Figure 3-11*, there are a button and two knobs in the **Horizontal Controls**. The following practices will gradually direct you to be familiar with the setting of horizontal time base.

Figure 3-11 Horizontal Control Zone

1. Turn the **Horizontal Scale** knob to change the horizontal time base setting and observe the consequent status information change. Turn the **Horizontal Scale** knob to change the horizontal time base, and it can be found that the **Horizontal Time Base** displayed in the status bar changes accordingly.

2. Use the **Horizontal Position** knob to adjust the horizontal position of the signal in the waveform window. The **Horizontal Position** knob is used to control the triggering displacement of the signal or for other special applications. If it is applied to triggering the displacement, it can be observed that the waveform moves horizontally with the knob when you rotate the **Horizontal Position** knob.

    Triggering displacement back to 0 shortcut key

    Turn the **Horizontal Position** knob to change the horizontal position of channel and push the **Horizontal Position** knob to set the triggering displacement back to 0 as a shortcut key.

3. Push the **Horizontal HOR** button to switch between the normal mode and the wave zoom mode.

Introduction to the Trigger System

As shown in *Figure 3-12*, there are one knob and three buttons make up **Trigger Controls**. The following practices will direct you to be familiar with the setting of the trigger system gradually.

Figure 3-12 Trigger Control Zone

1. Push the **Trigger Menu** button and call out the trigger menu. With the operations of the menu selection buttons, the trigger setting can be changed.

2. Use the **Trigger Level** knob to change the trigger level setting.
    By turning the **Trigger Level** knob, the trigger indicator in the screen will move up and down. With the movement of the trigger indicator, it can be observed that the trigger level value displayed in the screen changes accordingly.
    Note: Turning the **Trigger Level** knob can change trigger level value and it is also the hotkey to set trigger level as the vertical mid point values of the amplitude of the trigger signal.

3. Push the **Force** button to force a trigger signal, which is mainly applied to the

Introduction to the Touchscreen Controls (Depending on Model)

If the LCD is touchscreen, you can control the oscilloscope by different gestures. The touchable icon at the top right of the screen is used to enable (   ) or disable (   ) the touchscreen controls.

The instruction of touchscreen controls is as below. You can also use the buttons / knobs enclosed in brackets to do the same thing.

Operate the Menu through Touchscreen

● **Select a menu item:** Touch the menu items in the bottom menu, or in the right menu, or in the left menu.

● **Switch menu items:** If there are options that can be switched in the menu, you can repeatedly touch the area of the menu item to switch, or push the corresponding button to switch. See figure below:

Press repeatedly to
switch the options

● **Scroll the list:** If there is a scroll bar in the left menu or in the file system window, you can swipe up and down to scroll the list.

● **Touchable menu pane:** Click the 🏠 icon on the left top of the display area, a menu pane will be shown. Clicking the menu item is same as pushing the corresponding button.

Gestures in Normal Mode

● **Select a channel** (**CH1** or **CH2** button): Touch the pointer on the left side of

corresponding channel to make it in selected state.

● **Set the vertical position of the selected channel** (**Vertical Position** knob): Swipe up or down on the screen.

Touch to select the channel ←

Selected Unselected

Control the vertical position
of the selected channel
● **Set the trigger level of the source in trigger menu** (**Trigger Level** knob): Swipe up or down on the area nearby the trigger pointer on the right.

Control the trigger level of
the source in trigger menu
● **Set the horizontal position** (**Horizontal Position** knob): Swipe left or right on the display area.

18
Double Zoom and Single Zoom

In touchable menu pane, if **DoubleZoom** is selected, in the display area, pinch and spread horizontally to change the time base; pinch and spread vertically to change the voltage division of current channel.
In touchable menu pane, if **SingleZoom** is selected, click anywhere on the Display area to show the touching control panel.
● **Set the voltage division (Vertical Scale** knob): Click on the left upper area to increase

the voltage division of CH1; click on the left lower area to decrease the voltage division of CH1. Click on the right upper area to increase the voltage division of CH2; click on the right lower area to decrease the voltage division of CH2.

- **Set the horizontal time base** (**Horizontal Scale** knob): Click on the left area to increase the voltage division; click on the right area to decrease the voltage division.

Gestures in Wave Zoom Mode

Push the **Horizontal HOR** button to enter into zoom mode. The top half of the display shows the Main window and the bottom half displays the Zoom window. The Zoom window is a magnified portion of the Main window.

Control the horizontal position of Zoom Window

Pinch and spread horizontally to change the time base of Zoom Window

Pinch and spread vertically to change the voltage division of current channel
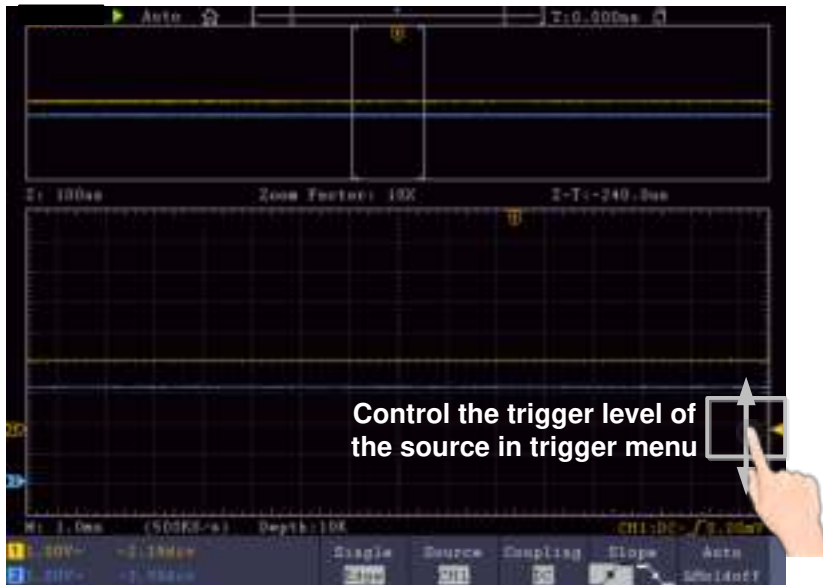

(**Double Zoom**)

(Single Zoom)

Other Operations Using Touchscreen

● **Measure with Cursors:**
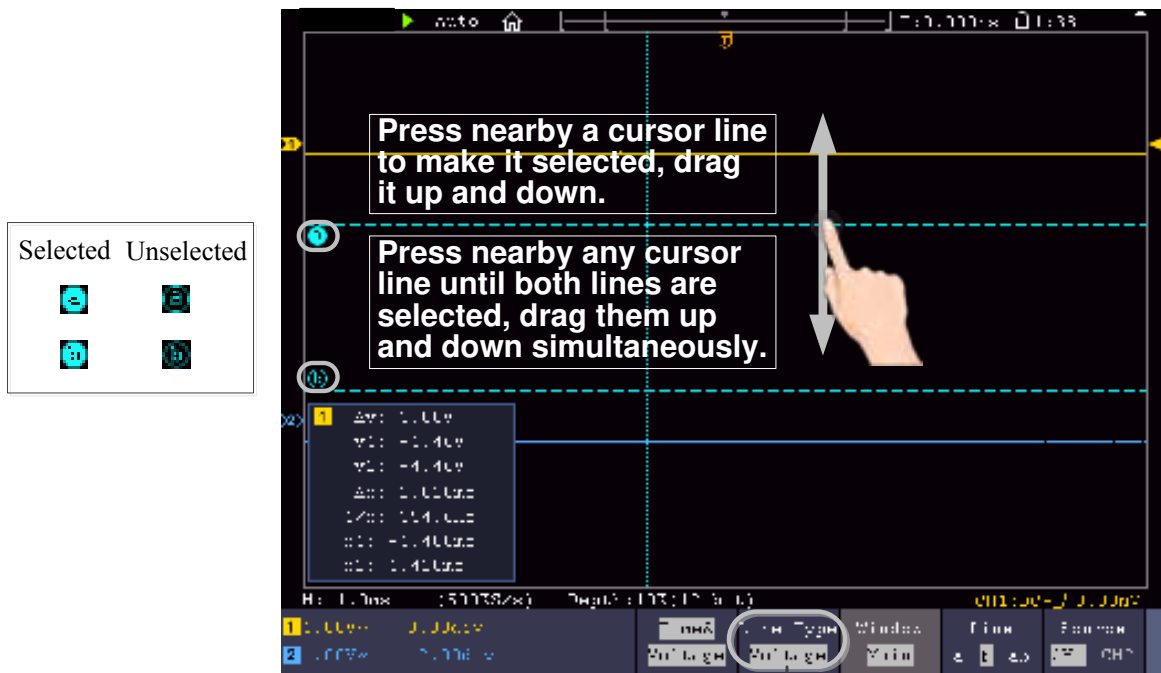

Switch horizontal or vertical lines
If vertical lines are selected, drag left and right.

● **Run/Stop**: Double tap on the display area, or click the ▶ or ❚❚ on the left top of the display area to run or stop the waveform sampling.

● **Touch keyboard**: Click to input.

● **Adjust value in the menu item:** .

Click to increase the
value of cursor position

Move the cursor

Click to decrease the
value of cursor position

24
4. Advanced User Guidebook

Up till now, you have already been familiar with the basic operations of the function areas, buttons and knobs in the front panel of the oscilloscope. Based the introduction of the previous Chapter, the user should have an initial knowledge of the determination of the change of the oscilloscope setting through observing the status bar. If you have not been familiar with the above-mentioned operations and methods yet, we advise you to read the section of Chapter 3 "Quick User Guidebook".

This chapter will deal with the following topics mainly:

- **How to Set the Vertical System**
- **How to Set the Horizontal System**
- **How to Set the Trigger/Decoding System**
- **How to Implement the Sampling Setup**
- **How to Set the Display System**
- **How to Save and Recall Waveform**
- **How to Record/Playback Waveforms**
- **How to Clone and Recall a waveform**
- **How to Implement the Auxiliary System Function Setting**
- **How to Update your Instrument Firmware**
- **How to Measure Automatically**
- **How to Measure with Cursors**
- **How to Use Autoscale**
- **How to Use Built-in Help**
- **How to Use Executive Buttons**
- **How to Print the Screen Image**

It is recommended that you read this chapter carefully to get acquainted the various measurement functions and other operation methods of the oscilloscope.

How to Set the Vertical System

The **VERTICAL CONTROLS** includes three menu buttons such as **CH1**, **CH2**, **CH3**, **CH4** and **Math**, and two knobs such as **Vertical Position**, **Vertical Scale**.

Setting of CH1 - CH4

Each channel has an independent vertical menu and each item is set respectively based on the channel.

To turn waveforms on or off (channel, math)

Pushing the **CH1, CH2, CH3, CH4**, or **Math** buttons have the following effect:

• If the waveform is off, the waveform is turned on and its menu is displayed.

• If the waveform is on and its menu is not displayed, its menu will be displayed.

• If the waveform is on and its menu is displayed, the waveform is turned off and its menu goes away.

The description of the Channel Menu is shown as the following list:

Function Menu	Setting		Description
Coupling	DC AC GROUND		Pass both AC and DC components of the input signal. Block the DC component of the input signal. Disconnect the input signal.
Inverted	ON OFF		Display inverted waveform. Display original waveform.
Probe	Attenu	0.001X to 1000X	Step by $1 - 2 - 5$. Match this to the probe attenuation factor to have an accurate reading of vertical scale.
	MeasCurr	YES NO	If you are measuring current by probing the voltage drop across a resistor, choose **YES**.
	A/V (mA/V) V/A (mV/A)		Turn the **M** knob to set the Amps/Volts ratio. The range is 100 mA/V - 1 KA/V. Amps/Volts ratio = 1/Resistor value Volts/Amp ratio is automatically calculated.
Limit	Full band 20M		Get full bandwidth. Limit the channel bandwidth to 20MHz to reduce display noise.

1. **To set channel coupling**

   Taking the Channel 1 for example, the measured signal is a square wave signal containing the direct current bias. The operation steps are shown as below:
   (1) Push the **CH1** button to show the CH1 SETUP menu.
   (2) Select **Coupling** in the bottom menu.

(3) Select **DC** in the right menu. Both DC and AC components of the signal are passed.

(4) Select **AC** in the right menu. The direct current component of the signal is blocked.

2. To adjust the probe attenuation

For correct measurements, the attenuation coefficient settings in the operating menu of the Channel should always match what is on the probe (see "*How to Set the Probe Attenuation Coefficient*" on P12). If the attenuation coefficient of the probe is 1:1, the menu setting of the input channel should be set to X1.

Take the Channel 1 as an example, the attenuation coefficient of the probe is 10:1, the operation steps are shown as follows:

(1) Push the **CH1** button to show the CH1 SETUP menu.

(2) Select **Probe** in the bottom menu. Select **Attenu** in the right menu, turn the **M** knob to set it as **10×**.

3. To measure current by probing the voltage drop across a resistor

Take the Channel 1 as an example, if you are measuring current by probing the voltage drop across a 1Ω resistor, the operation steps are shown as follows:

(1) Push the **CH1** button to show CH1 SETUP menu.

(2) Select **Probe** in the bottom menu. In the right menu, set **MeasCurr** as **YES**, the A/V radio menu will appear below. Select it; turn the **M** knob to set the Amps/Volts ratio. Amps/Volts ratio = 1/Resistor value. Here the A/V radio should be set to 1.

4. To invert a waveform

Waveform inverted: the displayed signal is turned 180 degrees against the phase of the earth potential.

Taking the Channel 1 for example, the operation steps are shown as follows:

(1) Push the **CH1** button to show the CH1 SETUP menu.

(2) Select **Inverted** in the bottom menu, switch to **ON.** the waveform is inverted. Push again to switch to **OFF,** the waveform goes back to its original one.

5. To set bandwidth limit

When high frequency components of a waveform are not important to its analysis, the bandwidth limit control can be used to reject frequencies above 20 MHz.

Taking the Channel 1 for example, the operation steps are shown as below:

(1) Push the **CH1** button to show CH1 SETUP menu.

(2) Select **Limit** in the bottom menu.

(3) Select **Full band** in the right menu. The high frequency of the signal will be allowed to pass.

(4) Select **20M** in the right menu. The bandwidth is limited to 20 MHz. The frequencies above 20MHz will be rejected.

Use Mathematical Manipulation Function

The **Mathematical Manipulation** function is used to show the results of the addition, multiplication, division and subtraction operations between two channels, the FFT operation for a channel, advanced math feature including Intg, Diff, Sqrt, user defined function, and digital filter. Press the **Math** button to display the menu on the bottom.

The Waveform Calculation menu:

Function Menu		Setting	Description
Waveform Math	Factor1	CH1 CH2 CH3 CH4	Select the signal source of the factor1
	Sign	+ - * /	Select the sign of mathematical manipulation
	Factor2	CH1 CH2 CH3 CH4	Select the signal source of the factor2
	Vertical (div)	Turn the **M** knob to adjust the vertical position of the Math waveform	
	Vertical (V/div)	Turn the **M** knob to adjust the vertical division of the Math waveform	
FFT	Source	CH1 CH2 CH3 CH4	Select the FFT source.
	Window	Hamming Rectangle Blackman Hanning Kaiser Bartlett	Select window for FFT.
	Format	Vrms	Select Vrms for Format.
		dB	Select dB for Format.
	Hori (Hz)	Position value Time base value/	Switch to select the horizontal position or time base of the FFT waveform, turn the **M** knob to adjust it

		Position value	Switch to select the vertical position or voltage division of the FFT waveform, turn the **M** knob to adjust it
	Vertical	Division value/	
User Function	Intg, Diff, Sqrt, and user defined function		
DIR	channel	CH1 CH2	Select channel
	type	low-pass	Only the signals whose frequencies are lower than the current cut-off frequency can pass the filter.
		high-pass	Only the signals whose frequencies are greater than the current cutoff frequency can pass the filter.
		band-pass	Only the signals whose frequencies are greater than the cutoff frequency down and lower than the current cutoff frequency upper can pass the filter.
		band-reject	Only the signals whose frequencies are lower than the current cutoff frequency down or greater than the current cutoff frequency upper can pass the filter.
	window	Retangular Tapered Triangular Hanning Hamming Blackman	Select window for digital filter
	cut-off fre or upper down		Turn the **M** knob to set cut-off frequency
	Vertical (div)		Turn the **M** knob to adjust the vertical position of Math waveform

Waveform math

Taking the additive operation between Channel 1 and Channels 2 for example, the operation steps are as follows:

1. Press the **Math** button to display the math menu in the bottom. The pink M waveform appears on the screen.

2. Select **Waveform Math** in the bottom menu.

3. In the right menu, select **Factor1** as **CH1**.

4. Select **Sign** as + in the right menu.

5. In the right menu, select **Factor2** as **CH2**.

6. Select **Vertical (div)** in the right menu, turn the **M** knob to adjust the vertical position of Math waveform.

7. Select **Vertical (V/div)** in the right menu, turn the **M** knob to adjust the vertical division of Math waveform.

User defined function

1. Press the **Math** button to display the math menu in the bottom.

2. Select **User Function** in the bottom menu, an expression input keyboard pops up.

Expression — Clear

Channel

Operators —

Confirm

Integral   Differential   Square root
3. Create an expression. When done, choose ⏎ in the keyboard to confirm. The division of Math waveform is displayed at the left bottom of screen.

Digital Filter

Digital filter provides 4 types of filters (low pass, high pass, band pass and band reject). The specified frequencies can be filtered by setting the cut-off frequency. Digital filter can only apply to CH1 or CH2.

1. Press the **Math** button to display the math menu in the bottom.

2. Select **DIR** in the bottom menu.

3. In the right menu, select **channel** as **CH1** or **CH2**.

4. In the right menu, select **type**, select the desired filter type.

5. In the right menu, select **window**, select the desired window.

6. When **low-pass** or **high-pass** type is selected, select **cut-off fre** in the right menu. When **band-pass** or **band-reject** type is selected, select **upper** or **down** in the right menu. Turn **M** knob to adjust the frequency.

7. In the right menu, select **Vertical (div)**, turn **M** knob to adjust the vertical position of Math waveform. The voltage division of Math waveform is the same as the selected channel.

Note: On the Scan format, digital filter is disabled.

Using FFT function

The FFT (fast Fourier transform) math function mathematically converts a time-domain waveform into its frequency components. It is very useful for analyzing the input signal on Oscilloscope. You can match these frequencies with known system frequencies, such as system clocks, oscillators, or power supplies.

FFT function in this oscilloscope transforms 8192 data points of the time-domain signal into its frequency components mathematically (the record length should be 10K or above). The final frequency contains 4096 points ranging from 0Hz to Nyquist frequency.

Taking the FFT operation for example, the operation steps are as follows:

1. Press the **Math** button to display the math menu in the bottom.

2. Select **FFT** in the bottom menu.

3. In the right menu, select **Source** as **CH1**.

4. Select **Window** in the right menu; select the proper window type in the left menu.
5. Select **Format** as Vrms or dB in the right menu.
6. Select **Hori** in the right menu; select repeatedly to make the 🅼 symbol in front of **Hz**, turn the **M** knob to adjust the horizontal position of FFT waveform; then select to make the 🅼 symbol in front of the **Hz/div** below, turn the **M** knob to adjust the time base of FFT waveform.

7. Select **Vertical** in the right menu; do the same operations as above to set the vertical position and voltage division.

To select the FFT window

■ There are 6 FFT windows. Each one has trade-offs between frequency resolution and magnitude accuracy. What you want to measure and your source signal characteristics help you to determine which window to use. Use the following guidelines to select the best window.

Type	Characteristics	Window
Hamming	Better solution for magnitude than Rectangle, and good for frequency as well. It has slightly better frequency resolution than Hanning. Recommend to use for: ● Sine, periodic and narrow band random noise. ● Transients or bursts where the signal levels before and after the event are significantly different.	

Rectangle	Best solution for frequency, worst for magnitude. Best type for measuring the frequency spectrum of nonrepetitive signals and measuring frequency components near DC. Recommend to use for: ● Transients or bursts, the signal level before and after the event are nearly equal. ● Equal-amplitude sine waves with frequencies those are very close. ● Broadband random noise with a relatively slow varying spectrum.	
Blackman	Best solution for magnitude, worst for frequency. Recommend to use for: ● Single frequency waveforms, to find higher order harmonics.	
Hanning	Good for magnitude, but poorer frequency resolution than Hamming. Recommend to use for: ● Sine, periodic and narrow band random noise. ● Transients or bursts where the signal levels before and after the event are significantly different.	
Kaiser	The frequency resolution when using the Kaiser window is fair; the spectral leakage and amplitude accuracy are both good. The Kaiser window is best used when frequencies are very close to the same value but have widely differing amplitudes (the side lobe level and shape factor are closest to the traditional Gaussian RBW). This window is also good for random signals.	
Bartlett	The Bartlett window is a slightly narrower variant of the triangular window, with zero weight at both ends.	

Notes for using FFT

■ Use the default **dB** scale for details of multiple frequencies, even if they have very different amplitudes. Use the **Vrms** scale to compare frequencies.

■ DC component or offset can cause incorrect magnitude values of FFT waveform. To minimize the DC component, choose AC Coupling on the source signal.

■ To reduce random noise and aliased components in repetitive or single-shot events, set the oscilloscope acquisition mode to average.

What is Nyquist frequency?

The Nyquist frequency is the highest frequency that any real-time digitizing oscilloscope can acquire without aliasing. This frequency is half of the sample rate. Frequencies above the Nyquist frequency will be under sampled, which causes aliasing. So pay more attention to the relation between the frequency being sampled and measured.

Use Vertical Position and Scale Knobs

The 4 channels use the same **Vertical Position** and **Vertical Scale** knobs. If you want to set the vertical scale and vertical position of a channel, press CH1, CH2, CH3 or CH4 at first to select the desired channel. Then turn the **Vertical Position** and **Vertical Scale** knobs to set the values.

1. The **Vertical Position** knob is used to adjust the vertical positions of the selected waveforms.
   The analytic resolution of this control knob changes with the vertical division. When the **Vertical Position** knob is rotated, the pointer of the earth datum point of the selected channel is directed to move up and down following the waveform, and the position message at the center of the screen would change accordingly (see *Figure 4-1*).

2. The **Vertical Scale** knob is used to regulate the vertical resolution of the selected wave forms.
   The sensitivity of the vertical division steps as 1-2-5. The vertical scale is displayed at the left bottom corner of the screen (see *Figure 4-1*).
Figure 4-1 Information about Vertical Scale

How to Set the Horizontal System

The **HORIZONTAL CONTROLS** includes the **Horizontal HOR** button and such knobs as **Horizontal Position** and **Horizontal Scale**.

1. **Horizontal Position** knob: this knob is used to adjust the horizontal positions of all channels (include those obtained from the mathematical manipulation), the analytic resolution of which changes with the time base.

2. **Horizontal Scale** knob: it is used to set the horizontal scale factor for setting the main time base or the window.

3. **Horizontal HOR** button: push it to switch between the normal mode and the wave zoom mode. For more detailed operations, see the introductions below.

Zoom the Waveform

Push the **Horizontal HOR** button to enter wave zoom mode. The top half of the display shows the Main window and the bottom half displays the Zoom window. The Zoom window is a magnified portion of the Main window.

Figure 4-2 Wave Zoom Mode

In normal mode, the **Horizontal Position** and **Horizontal Scale** knobs are used to adjust the horizontal position and time base of the Main window.
In wave zoom mode, the **Horizontal Position** and **Horizontal Scale** knobs are used to adjust the horizontal position and time base of the Zoom window.

How to Set the Trigger/Decoding System

Trigger determines when DSO starts to acquire data and display waveform. Once trigger is set correctly, it can convert the unstable display to meaningful waveform.

When DSO starts to acquire data, it will collect enough data to draw waveform on left of trigger point. DSO continues to acquire data while waiting for trigger condition to occur. Once it detects a trigger it will acquire enough data continuously to draw the waveform on right of trigger point.

Trigger control area consists of 1 knob and 2 menu buttons.

Trigger Level: The knob that set the trigger level; push the knob and the level will be set as the vertical mid point values of the amplitude of the trigger signal.

Force: Force to create a trigger signal and the function is mainly used in "Normal" and "Single" mode.

Trigger Menu: The button that activates the trigger control menu.

Trigger Control

The oscilloscope provides three trigger types: single trigger, logic trigger and bus trigger. Each type of trigger has different sub menus.

Press Trigger **Menu** panel button, then bottom menu Trigger Type, select Single, Logic or Bus Trigger on the popup right menus, turn the M knob to choose different trigger types.

Single trigger: Use a trigger level to capture stable waveforms in two channels simultaneously.

Logic trigger: Trigger the signal according to the condition of logic relationship.

Bus trigger: Set bus timing trigger.

The **Single Trigger, Logic Trigger** and **Bus Trigger** menus are described respectively as follows:

Single Trigger

Single trigger has eight types: edge trigger, video trigger, pulse trigger, slope trigger, runt trigger, windows trigger, timeout trigger and Nth edge trigger.

Edge Trigger: It occurs when the trigger input passes through a specified voltage level with the specified slope.

Video Trigger: Trigger on fields or lines for standard video signal.

Pulse Trigger: Find pulses with certain widths.

Slope Trigger: The oscilloscope begins to trigger according to the signal rising or

falling speed.

Runt Trigger: Trigger pulses that pass through one trigger level but fail to pass
through the other trigger level.

Windows Trigger: Provide a high trigger level and low trigger level, the oscilloscope
triggers when the input signal passes through the high trigger level or
the low trigger level.

Timeout Trigger: The oscilloscope triggers when the time interval from when the
rising edge (or the falling edge) passes through the trigger level to
when the neighbouring falling edge (or the rising edge) passes
through the trigger level is greater than the timeout time set.

Nth Edge Trigger: The oscilloscope triggers on the Nth edge that appears on the
specified idle time.

The eight trigger modes in Single Trigger are described respectively as follows:

1. Edge Trigger

An edge trigger occurs on trigger level value of the specified edge of input signal.
Select Edge trigger mode to trigger on rising edge or falling edge.

In Edge Trigger mode, the trigger setting information is displayed on bottom right of

the screen, for example, CH1:DC-⌐0.00mV , indicates that trigger type is edge,

trigger source is CH1, coupling is DC, and trigger level is 0.00mV.

Edge menu list:

Menu	Settings	Instruction
Single Mode	Edge	Set vertical channel trigger type as edge trigger.
Source	CH1	Channel 1 as trigger signal.
	CH2	Channel 2 as trigger signal.
	CH3	Channel 3 as trigger signal.
	CH4	Channel 4 as trigger signal.
	AC Line	AC power line as trigger signal.
Coupling	AC	Block the direct current component.
	DC	Allow all component pass.
	HF	Block the high-frequency signal, only low-frequency component pass.
	LF	Block the low-frequency signal, only high-frequency component pass. (LF menu is only for specific models)
Slope	⬀ ⬂	Trigger on rising edge Trigger on falling edge
Mode Holdoff	Auto Normal Single	 Acquire waveform even no trigger occurs Acquire waveform when trigger occurs When trigger occurs, acquire one waveform then stop

	Holdoff	
	Reset	100 ns - 10 s, turn the **M** knob or click ⊟ to set time interval before another trigger occur, press ⬅ ⮕ panel button or click ⬅ ⮕ to move cursor to choose which digit to be set. Set Holdoff time as default value (100 ns).

Trigger Level: trigger level indicates vertical trig position of the channel, turn the trig level knob or slide on the touch screen upward and downward to move trigger level, during setting, an orange red dotted line displays to show trig position, and the value of trigger level changes at the right corner, after setting, dotted line disappears.

2. Video Trigger

Choose video trigger to trigger on fields or lines of NTSC, PAL or SECAM standard video signals.
In Video Trigger mode, the trigger setting information is displayed on bottom right of

the screen, for example, `CH1: ALL`, indicates that trigger type is Video, trigger

source is CH1, and Sync type is Even.

Video Trigger menu list:
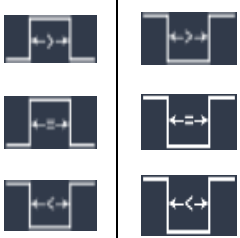

MENU	SETTING	INSTRUCTION
Single Mode	Video	Set vertical channel trigger type as video trigger
Source	CH1 CH2 CH3 CH4	Select CH1 as the trigger source Select CH2 as the trigger source Select CH3 as the trigger source Select CH4 as the trigger source
Modu	NTSC PAL SECAM	Select video modulation
Sync	Line Field Odd Even Line NO.	Synchronic trigger in video line Synchronic trigger in video field Synchronic trigger in video odd filed Synchronic trigger in video even field Synchronic trigger in designed video line, turn the **M** knob or click ⊟ to set the line number
Mode Holdoff	Auto	Acquire waveform even no trigger occurred

3. Pulse Width Trigger

Pulse trigger occurs according to the width of pulse. The abnormal signals can be detected through setting up the pulse width condition.

In Pulse Width Trigger mode, the trigger setting information is displayed on bottom right of the screen, for example, `CH1:DC-⎍0.00mV`, indicates that trigger type is pulse width, trigger source is CH1, coupling is DC, polarity is positive, and trigger level is 0.00mV.

Pulse Width Trigger menu list:

MENU	SETTING	INSTRUCTION
Single Mode	Pulse	Set vertical channel trigger type as pulse trigger.
Source	CH1 CH2 CH3 CH4	Select CH1 as the trigger source Select CH2 as the trigger source Select CH3 as the trigger source Select CH4 as the trigger source
Coupling	AC DC	Not allow DC portion to pass. Allow all portion pass.
when	Polarity	Choose the polarity
		Select pulse width condition and adjust the **M** knob or click to set time, press panel button or click to move cursor to choose which digit to be set.
Mode Holdoff	Auto Normal Single Holdoff Reset	Acquire waveform even no trigger occurred Acquire waveform when trigger occurred When trigger occurs, acquire one waveform then stop 100 ns - 10 s, adjust **M** knob or click to set time interval before another trigger occur, press panel button or click to move cursor to choose which digit to be set. Set Holdoff time as 100 ns
4. Slope Trigger

Slope trigger sets the oscilloscope as the positive/negative slope trigger within the specified time.

In Slope Trigger mode, the trigger setting information is displayed on bottom right of

the screen, for example, CH1: ∫ △ 0.00mV , indicates that trigger type is slope, trigger source is CH1, slope is rising, 0.00mV is the differential between up level and low level threshold.

Slope trigger menu list:

MENU	SETTING	INSTRUCTION
Single Mode	Slope	Set vertical channel trigger type as slope trigger.
Source	CH1 CH2 CH3 CH4	Select CH1 as the trigger source Select CH2 as the trigger source Select CH3 as the trigger source Select CH4 as the trigger source
When	slope	Slope selecting
		Set slope condition; turn the **M** knob or click ⊞ to set slope time, press ⬅ ➡ panel button or click ⬅ ➡ to move cursor to choose which digit to be set.
Threshold &SlewRate	High level Low level Slew rate	Adjust **M** knob to set the High level upper limit. Adjust **M** knob to set Low level lower limit. Slew rate = (High level - Low level) / Settings
Mode Holdoff	Auto Normal Single	Acquire waveform even no trigger occurred Acquire waveform when trigger occurred When trigger occurs, acquire one waveform then stop
	Holdoff	100 ns – 10 s, turn the **M** knob or click ⊞ to set time interval before another trigger occur, press ⬅ ➡ panel button or click ⬅ ➡ to move cursor to choose which digit to be set.
	Reset	Set Holdoff time as 100 ns

5.Runt Trigger

Trigger pulses that pass through one trigger level but fail to pass through the other trigger level. Shown as below figure,
In Runt Trigger mode, the trigger setting information is displayed on bottom right of the screen, for example, CH1:⊓⊓△ 0.00mV , indicates that trigger type is runt,

trigger source is CH1, polarity is positive, 0.00mV is the differential between up level and low level threshold.
Runt Trigger

Runt Trigger menu list:

MENU	SETTING	INSTRUCTION
Single Mode	Runt	Set vertical channel trigger type as runt trigger.
Source	CH1	Select CH1 as the trigger source
	CH2	Select CH2 as the trigger source
	CH3	Select CH3 as the trigger source
	CH4	Select CH4 as the trigger source
Threshold	Up Level	Adjust the **M** knob or click to set the up level threshold.
	Low Level	Adjust the **M** knob or click to set the low level threshold.
	Polarity	Positive Polarity, the oscilloscope triggers on the positive runt pulse. Negative Polarity, the oscilloscope triggers on the negative runt pulse.
Condition		Adjust the **M** knob or click to set pulse width, press panel button or click to move cursor to choose which digit to be set. Trigger when runt pulse is greater than the set pulse width. Trigger when runt pulse equals to the set pulse width. Trigger when runt pulse is lower than the set pulse width.

	Auto	Acquire waveform even no trigger occurred
	Normal	Acquire waveform when trigger occurred
	Single	When trigger occurs, acquire one waveform then stop
Mode Holdoff	Holdoff	100 ns - 10 s, adjust **M** knob or click ![+/-] to set time interval before another trigger occur，press ![←][→] panel button or click ![←][→] to move cursor to choose which digit to be set.
	Reset	Set Holdoff time as 100 ns

6.Windows Trigger

Provide a high trigger level and low trigger level, the oscilloscope triggers when the input signal passes through the high trigger level or the low trigger level.
In Windows Trigger mode, the trigger setting information is displayed on bottom right

of the screen, for example, `CH1:⊓Π△ 0.00mV`, indicates that trigger type is

windows, trigger source is CH1, polarity is positive, 0.00mV the differential between up level and low level threshold.

Windows Trigger menu list:

MENU	SETTING	INSTRUCTION
Single Mode	Windows	Set vertical channel trigger type as Windows trigger.
Source	CH1 CH2 CH3 CH4	Select CH1 as the trigger source Select CH2 as the trigger source Select CH3 as the trigger source Select CH4 as the trigger source
Threshold	Up Level	Adjust the **M** knob or click ![+/-] to set the up level threshold.
	Low Level	Adjust the **M** knob or click ![+/-] to set the low level threshold.
Condition	Polarity ⊓Π ⊔Π	Positive Polarity, the oscilloscope triggers on the positive Windows pulse. Negative Polarity, the oscilloscope triggers on the negative Windows pulse.

40

		Enter: Triggers when the trigger signal enters the specified trigger level range. Exit: Triggers when the trigger signal exits the specified trigger level range. Time: Specify the hold time of the input signal after entering the specified trigger level. The oscilloscope triggers when the accumulated hold time is greater than the windows time. Available range is 30ns-10s, default 100ns.
Mode Holdoff	Auto Normal Single	Acquire waveform even no trigger occurred Acquire waveform when trigger occurred When trigger occurs, acquire one waveform then stop
	Holdoff	100 ns - 10 s, adjust **M** knob or click to set time interval before another trigger occur, press panel button or click to move cursor to choose which digit to be set.
	Reset	Set Holdoff time as 100 ns
7.Timeout Trigger

The oscilloscope triggers when the time interval from when the rising edge (or the falling edge) passes through the trigger level to when the neighbouring falling edge (or the rising edge) passes through the trigger level is greater than the timeout time set.

In Timeout Trigger mode, the trigger setting information is displayed on bottom right of the screen, for example, CH1: -150V , indicates that trigger type is Timeout, trigger source is CH1, edge is positive, 0.00mV is up level or low level threshold.

Timeout Trigger menu list:

MENU	SETTING	INSTRUCTION
Single Mode	Timeout	Set vertical channel trigger type as Timeout trigger.
Source	CH1 CH2 CH3 CH4	Select CH1 as the trigger source Select CH2 as the trigger source Select CH3 as the trigger source Select CH4 as the trigger source

	Edge	Start timing when the rising edge of the input signal passes through the trigger level.
Edge		Start timing when the falling edge of the input signal passes through the trigger level.
Configure	Idle Time	Set idle time. Idle time means the minimum time of idle clock before searching data that can meet trigger conditions. Available range is 30ns-10s, default 100ns.
Mode Holdoff	Auto Normal Single	Acquire waveform even no trigger occurred Acquire waveform when trigger occurred When trigger occurs, acquire one waveform then stop
	Holdoff	100 ns - 10 s, adjust **M** knob or click to set time interval before another trigger occur, press panel button or click move cursor to choose which digit to be set.
	Reset	Set Holdoff time as 100 ns

8.Nth Edge trigger

The oscilloscope triggers on the Nth edge that appears on the specified idle time. As figure shown below, the oscilloscope should trigger on the second falling edge after the specified idle time and the idle time should be set to P1/P2/P3/P4 < Idle Time < M. Wherein, M, P1, P2, P3 and P4 are positive or negative pulse width participating in the counting.

In Nth Edge Trigger mode, the trigger setting information is displayed on bottom right of the screen, for example, , indicates that trigger type is Nth Edge, trigger source is CH1, -150V is up level or low level threshold.
Nth Edge Trigger

Nth Edge Trigger menu list:

MENU	SETTING	INSTRUCTION
Single Mode	Nth Edge	Set vertical channel trigger type as Nth Edge trigger.
Source	CH1 CH2 CH3 CH4	Select CH1 as the trigger source Select CH2 as the trigger source Select CH3 as the trigger source Select CH4 as the trigger source
Edge	Edge ◣ ◢	Trigger on the rising edge of the input signal when voltage level meets the specified trigger level. Trigger on the falling edge of the input signal when voltage level meets the specified trigger level.
Configure	Idle Time	Set idle time before the edge counting in Nth Edge Trigger. Adjust M knob or click ⊞ to set idle time press ← → panel button or click ← → to move cursor to choose which digit to be set. Available range is 30ns-10s, default 100ns.
	Edge Num	Set the edge number value of "N" in Nth Edge trigger.
Mode Holdoff	Auto Normal Single Holdoff Reset	Acquire waveform even no trigger occurred Acquire waveform when trigger occurred When trigger occurs, acquire one waveform then stop 100 ns - 10 s, adjust **M** knob or click ⊞ to set time interval before another trigger occur, press ← → panel button or click ← → move cursor to choose which digit to be set. Set Holdoff time as 100 ns

Logic Trigger

Trigger according to logic relation.

In Logic Trigger mode, the trigger setting information is displayed on bottom right of the screen, for example, CH1>HHHH>CH4 ⋺⊃ CH1: H 0.00mV，indicates that trigger type is Logic, logic mode is AND, CH1 high level and trigger level is 0.00mV.

Logic Trigger menu list:

| MENU	SETTING	INSTRUCTION
Mode	Logic	Set vertical channel trigger type as Logic trigger.
Logic Mode	AND	Set logic mode as AND.
	OR	Set logic mode as OR.
	XNOR	Set logic mode as XNOR.
	XOR	Set logic mode as XOR.
Input Mode	CH1	Set CH1 as High Level, Low level, high or low level, Rise and Fall.
	CH2	Set CH2 as High Level, Low level, high or low level, Rise and Fall.
	CH3	Set CH3 as High Level, Low level, high or low level, Rise and Fall.
	CH4	Set CH4 as High Level, Low level, high or low level, Rise and Fall. *Note :* When input mode of one channel is set as Rise or Fall, the other channel could not be set as Rise and Fall at the same time.
Out Mod	Goes True	Trigger when condition turns True from False.
	Goes False	Trigger when condition turns False from True.
	Is True >	Trigger when the time of true condition is greater than the set time
	Is True =	Trigger when the time of true condition is equal to the set time
	Is True <	Trigger when the time of true condition is lower than the set time
Mode Holdoff	Auto	Acquire waveform even no trigger occurred
	Normal	Acquire waveform when trigger occurred
	Single	When trigger occurs, acquire one waveform then stop
	Holdoff	100 ns - 10 s, adjust **M** knob or click to set time interval before another trigger occur, press panel button or click move cursor to choose which digit to be set.
	Reset	Set Holdoff time as 100 ns

Bus Trigger

1. RS232 Trigger

RS232 is a serial communication mode used in the data transmission between PCs or between PC and Terminal. A character is transmitted as a frame of data which consist of 1bit start bit, 5-8bits data bits, 1bit check bit and 1-2 stop bits.

In RS232 bus trigger mode, the trigger setting information is displayed on bottom right of the screen, for example, `RS232 CH1:0.00mV`，indicates that trigger type is RS232, CH1 trigger level is 0.00mV.

Format as shown in the figure below,
RS232 Trigger

RS232 Trigger menu list:

MENU	SETTING		INSTRUCTION
Bus Type	RS232		Set vertical channel bus type as RS232 trigger.
Input	Source	CH1	Select CH1 as the trigger source.
		CH2	Select CH2 as the trigger source.
		CH3	Select CH3 as the trigger source.
		CH4	Select CH4 as the trigger source.
	Polarity	Normal	Select polarity of data transmission as Normal. Select polarity of data transmission as Inverted.
		Inverted	
When	Start		Trigger on the start frame of position. After choosing this condition, press Configure to enter detailed settings.
	Error		Trigger when error frame is detected. After choosing this condition, press Configure to enter detailed settings.
	Chk Error		Trigger when Chk Error is detected. After choosing this condition, press Configure to enter detailed settings.
	Data		Trigger on the last bit of the preset data. After choosing this condition, press Configure to enter detailed settings.
Configure	Start		**Common Baud:** adjust **M** knob **to choose common baud.** **Custom Baud:** adjust **M** knob **to choose baud**, ranges from 50 to 10,000,000.
	Error		**Stop Bit**：Select "1"or "2". **Parity:** "NO""EVEN""ODD" **Common Baud:** adjust **M** knob **to choose common baud.**

		Custom Baud: adjust **M** knob **to choose baud**, ranges from 50 to 10,000,000.
	Chk Error	Even-Odd：Select Even or Odd. **Common Baud:** adjust **M** knob **to choose common baud.** **Custom Baud:** adjust **M** knob **to choose baud**, ranges from 50 to 10,000,000.
	Data	Data Bits：Set as 5、6、7、8 bits. Data：Set data according to data bits, ranges from 0-31, 0-63, 0-127 or 0-255.
Mode	Auto	Acquire waveform even no trigger occurred
	Normal	Acquire waveform when trigger occurred
Holdoff	Single	When trigger occurs, acquire one waveform then stop

2. I2C Trigger

The I2C serial bus consists of SCL and SDA. The transmission rate is determined by SCL, and the transmission data is determined by SDA. As shown in below figure, oscilloscope can trigger on the start, restart, stop, ack lost, specific device address or data value, also device address and data value at the same time.

In I2C bus trigger mode, the trigger setting information is displayed on bottom right of the screen, for example, I2C CH1:0.00mV CH2:0.00mV， indicates that trigger type is I2C, CH1 trigger level is 0.00mV, CH2 trigger level is 0.00mV.
I2C Trigger menu list:

MENU	SETTING	INSTRUCTION
Bus Type	I2C	Set vertical channel bus type as I2C trigger.
Source	SCL SDA	Set SCL. Set SDA.
When	Start	Trigger when SDA data transitions from high to low while SCL is high.
	Restart	When another start condition occurs before a stop

			condition.
	Stop		Trigger when SDA data transitions from low to high while SCL is high.
	Ack Lost		Trigger when SDA data is high during any acknowledgement of SCL clock position.
	Address		Trigger on the read or write bit when the preset address is met.
	Adr For mat	Addr Bits	Set Address Bits to be "7"、 "8"or"10".
		Addr ess	Set address according to the preset address bits, address range is 0-127, 0-255, 0-1023 respectively. Set Data Direction to be Read or Write.
		Dire ction	Note: The set is not available when Address bits is set to "8".
	Data		Search for the preset data value on SDA and trigger on the dump edge of SCL of the last bit of the data area.
	DatF orma t	Byte lengt h	Set data byte length, available range 1-5 bytes. Adjust **M** knob or click ⊞⊟ to set byte length.
		Curr entB it	Select the data bit, ranges from 0 to (byte length*8 -1).
		Data	Set data to be H, L or X (H or L)
		All Bits	Set all the data bits to be the specified value in Data
	Addr / Data		Trigger when Address and Data conditions are met at the same time .
Mode	Auto		Acquire waveform even no trigger occurred
	Normal		Acquire waveform when trigger occurred
Holdoff	Single		When trigger occurs, acquire one waveform then stop
3. SPI Trigger

Trigger on the specified data when the timeout condition is meet. When using SPI trigger, you need to specify the SCL and SDA data sources.
In SPI bus trigger mode, the trigger setting information is displayed on bottom right of the screen, for example, `SPI CH1:0.00mV  CH2:0.00mV`, indicates that trigger type is SPI, CH1 trigger level is 0.00mV, CH2 trigger level is 0.00mV.

SPI Trigger menu list:

MENU	SETTING	INSTRUCTION

Bus Type	SPI	Set vertical channel bus type as SPI trigger.
Source	SCL	Set SCL.
	SDA	Set SDA.
Time Out	Time out	Set the minimum time that SCL must be idle, that is a period of SCL, available range 100ns-10s. Time out means SCL keeps idle for a specified time before oscilloscope starts to search for the data(SDA) on which to trigger. adjust **M** knob or click [+/−] to set time out, press ← → panel button or click [←/→] move cursor to choose which digit to be set.
ClockEdge&Data	Clock Edge [⤴ ⤵]	Set Edge Clock as Rising edge or Falling edge. Means sample the SDA data on the rising edge or falling edge of the clock.
	Data Bits	Set the number of bits of the serial data character string. It can be set to any integer between 4-32. adjust **M** knob or click [+/−] to set Data Bits.
	Current Bit	Set the number of the data bits, ranges from 0-31, adjust **M** knob or click [+/−] to set Current Bit.
	Data	Set the value of the current data bit as H,L or X (H or L).
	All Bits	Set all the data bits to be the specified value in Data.
Mode	Auto	Acquire waveform even no trigger occurred
	Normal	Acquire waveform when trigger occurred
Holdoff	Single	When trigger occurs, acquire one waveform then stop

4. CAN Trigger

CAN (Controller Area Network) is a serial communication protocol of the ISO international standardization.

By using the CAN bus trigger, you can trigger on **Start of Frame**, **Type of Frame**, **Identifier**, **Data**, **ID & Data**, **End of Frame**, **Missing Ack**, or **Bit Stuffing Error**. You need to specify the signal source, trigger signal type, sample point, and signal rate of the CAN signal.

In CAN bus trigger mode, the trigger setting information is displayed on bottom right of the screen, for example, `CAN    CH1:-126mV`, indicates that trigger

type is CAN, CH1 trigger level is -126 mV.

CAN Trigger menu list:

MENU	SETTING	INSTRUCTION		
Bus Type	CAN	Set vertical channel bus type as CAN trigger.		
Input	Source	CH1	Select CH1 as the trigger source.	
		CH2	Select CH2 as the trigger source.	
		CH3	Select CH3 as the trigger source.	
		CH4	Select CH4 as the trigger source.	
	Type	CAN_H	Actual CAN_H bus signal.	
		CAN_L	Actual CAN_L bus signal.	
		TX	Transmission signal on the CAN signal line.	
		RX	Received signal on the CAN signal line.	
	Sample Point	Turn the **M** knob (or tap on ⊞ in touchscreen) to set the Sample point, which is a point within a bit's time. The oscilloscope samples the bit level at this point. "Sample point" is represented by the percentage of "the time from the start of the bit's time to the sample point time" in the "bit's time". The range is 5% to 95%.		
	Common Baud	Turn the **M** knob to select from the Baud list on the left.		
	Custom Baud	Turn the **M** knob (or tap on ⊞ in touchscreen) to set the Baud. The range is 10,000 to 1,000,000. **Tip**: You can select the nearest value in Common Baud, and then adjust it in this menu.		
Condition	Start	Trigger on the start frame of the data frame.		
	Type	Type (Bottom menu)	Data	Trigger on the selected frame.
			Remote	
			Error	
			Overload	
	ID	Configure (Bottom menu)	Format	Select Standard or Extended.
			ID	Use the **M** knob and **Direction key** on the front panel to set.
	Data	Configure (Bottom menu)	Byte Length	Set the number of bytes with the **M** knob. The range is 1 to 8.
			Data	Set the data with the **M** knob and **Direction key** on the front panel.

			Format	Select Standard or Extended.
	ID&Data	Configure (Bottom menu)	ID	Use the **M** knob and **Direction key** on the front panel to set.
			Byte Length	Set the number of bytes with the **M** knob. The range is 1 to 8.
			Data	Set the data with the **M** knob and **Direction key** on the front panel.
	End	Trigger on the end frame of the data frame.		
	Missing Ack	Trigger on Missing Ack.		
	Bit Stuffing	Trigger on Bit Stuffing Error.		
Mode	Auto	Acquire waveform even no trigger occurred		
	Normal	Acquire waveform when trigger occurred		
Holdoff	Single	When trigger occurs, acquire one waveform then stop		

Bus Decoding

1. RS232 Decoding

To decode RS232 signal:

(1) Connect the RS232 signal to the Signal Input Channel of the oscilloscope.

(2) Adjust to the proper time base and voltage division.

(3) In trigger menu, select Bus trigger, and select bus type as RS232, set parameters based on the characteristics of the signal, trigger the signal correctly and obtain stable display. Refer to "*RS232 Trigger*" on page 44.

(4) Push the **Decode** button on the front panel. Select bus type as RS232. set parameters based on the characteristics of the signal. When the parameters are set correctly, the information carried by the signal will be displayed.

Tip: If there are repetitive menu items in both trigger menu and decoding menu, you can set anyone of them, the other will be changed synchronously.

Note:
● Use the **Trigger Level** knob to adjust the thresholds of bus trigger and bus decoding.
● When decoding, if "Parity" is not set to "None", and the check bit error is detected, two red error marks will be displayed in the corresponding position in the waveform.

RS232 Decoding menu list:

MENU	SETTING	INSTRUCTION
Bus Type	RS232	Set bus type of decoding as RS232.

	Common Baud	Turn the **M** knob to select from the Baud list on the left.
Configure	Custom Baud	Turn the **M** knob (or tap on ⊞⊟ in touchscreen) to set the Baud. The range is 50 to 10,000,000. **Tip**: You can select the nearest value in Common Baud, and then adjust it in this menu.
	Data Bits	Set the data width of each frame to match the signal. It can be set to 5, 6, 7 or 8.
	Parity	set the even-odd check mode to match the polarity used by the signal.
Display	Format	Binary Decimal Hex ASCII — Set the display format of the bus.
	EventTable	ON OFF — Select "ON" to display the event table.
	Save EventTable	If a USB storage device is currently connected to the instrument, save the event table data in a .csv (spreadsheet) formatted file on the external USB storage device.
	ASCII Table	ON OFF — Select "ON" to display the ASCII table.

2. I2C Decoding

To decode I2C signal:

(1) Connect the clock line (SCLK) and the data line (SDA) of the I2C signal to the Signal Input Channels of the oscilloscope.

(2) Adjust to the proper time base and voltage division.

(3) In trigger menu, select Bus trigger, and select bus type as I2C, set parameters based on the characteristics of the signal, trigger the signal correctly and obtain stable display. Refer to "*I2C Trigger*" on page 46.

(4) Push the **Decode** button on the front panel. Select bus type as I2C. set parameters based on the characteristics of the signal. When the parameters are set correctly, the information carried by the signal will be displayed.

Tip: If there are repetitive menu items in both trigger menu and decoding menu, you can set anyone of them, the other will be changed synchronously.

Decoded information interpretation:

Information	Abbreviation	Background
Read Address	R, Read, or do not display	Green
Write Address	W, Write, or do not display	Green
Data	D, Data, or do not display	Black

Note:
- Use the **Trigger Level** knob to adjust the thresholds of bus trigger and bus decoding.
- When the ACK (ACKnowledge Character) is not met, two red error marks will be displayed in the corresponding position in the waveform.

I2C Decoding menu list:

MENU	SETTING	INSTRUCTION
Bus Type	I2C	Set bus type of decoding as I2C.
Display	Format Binary Decimal Hex ASCII	Set the display format of the bus.
	EventTable ON OFF	Select "ON" to display the event table.
	Save EventTable	If a USB storage device is currently connected to the instrument, save the event table data in a .csv (spreadsheet) formatted file on the external USB storage device.
	ASCII Table ON OFF	Select "ON" to display the ASCII table.

3. SPI Decoding

To decode SPI signal:

(1) Connect the clock line (SCLK) and the data line (SDA) of the SPI signal to the Signal Input Channels of the oscilloscope.

(2) Adjust to the proper time base and voltage division.

(3) In trigger menu, select Bus trigger, and select bus type as SPI, set parameters based on the characteristics of the signal, trigger the signal correctly and obtain stable display. Refer to "*SPI Trigger*" on page 47.

(4) Push the **Decode** button on the front panel. Select bus type as SPI. set parameters based on the characteristics of the signal. When the parameters are set correctly, the information carried by the signal will be displayed.

Tip: If there are repetitive menu items in both trigger menu and decoding menu, you can set anyone of them, the other will be changed synchronously.

Note:
- Use the **Trigger Level** knob to adjust the thresholds of bus trigger and bus decoding.
- **LS First** in Bit Order menu item (Least Significant Bit First) means that the least significant bit will arrive first: hence e.g. the hexadecimal number 0x12, will arrive as the sequence 01001000 in binary representation, will be decoded as the reversed sequence 00010010.

SPI Decoding menu list:

MENU	SETTING	INSTRUCTION
Bus Type	SPI	Set bus type of decoding as SPI.
Configure	SCLK	Select the clock edge to match the signal, sample the SDA data on the rising or falling edge of the clock.
	Time Out	Set the minimum time that the clock (SCL) signal must be idle before the oscilloscope starts to search for the data (SDA) on which to trigger. The range is 30 ns to 10 s.
	Data Bits	Set the data width of each frame to match the signal. It can be set to any integer between 4 and 32.
	Bit Order	Select LS First or MS First to match the signal.
Display	Format	Binary Decimal Hex ASCII — Set the display format of the bus.
	EventTable	ON OFF — Select "ON" to display the event table.
	Save EventTable	If a USB storage device is currently connected to the instrument, save the event table data in a .csv (spreadsheet) formatted file on the external USB storage device.
	ASCII Table	ON OFF — Select "ON" to display the ASCII table.

4. CAN Decoding

To decode CAN signal:

(1) Connect the CAN signal to the Signal Input Channel of the oscilloscope.

(2) Adjust to the proper time base and voltage division.

(3) In trigger menu, select Bus trigger, and select bus type as CAN, set parameters based on the characteristics of the signal, trigger the signal correctly and obtain stable display. Refer to "*CAN Trigger*" on page 48.

(4) Push the **Decode** button on the front panel. Select bus type as CAN. set parameters based on the characteristics of the signal. When the parameters are set correctly, the information carried by the signal will be displayed.

Tip: If there are repetitive menu items in both trigger menu and decoding menu, you can set anyone of them, the other will be changed synchronously.

Decoded information interpretation:

Information	Abbreviation	Background
Identifier	I, ID, or do not display	Green
Overload Frame	OF	Green
Error Frame	EF	Green
Data Length code	L, DLC, or do not display	Blue
Data	D, Data, or do not display	Black
Cyclic Redundancy Check	C, CRC, or do not display	Valid: Purple Error: Red

Note:
- Use the **Trigger Level** knob to adjust the thresholds of bus trigger and bus decoding.
- When the ACK (ACKnowledge Character) of Data Frame or Remote Frame is not met, two red error marks will be displayed in the corresponding position in the waveform.
- Error Frame, Remote Frame, and Overload Frame will be identified in the "Data" column in the event table (Data Frame will not be identified).

CAN Decoding menu list:

MENU	SETTING	INSTRUCTION
Bus Type	CAN	Set bus type of decoding as CAN.
Display	Format	Binary Decimal Hex ASCII	Set the display format of the bus.
	EventTable	ON OFF	Select "ON" to display the event table.
	Save EventTable	If a USB storage device is currently connected to the instrument, save the event table data in a .csv (spreadsheet) formatted file on the external USB storage device.
	ASCII Table	ON OFF	Select "ON" to display the ASCII table.

How to Operate the Function Menu

The function menu control zone includes 8 function menu buttons: **Measure, Acquire, Utility, Cursor, Autoscale, Save, Display, Help** and 3 immediate-execution buttons: **Autoset, Run/Stop, Single.**

How to Implement Sampling Setup

Push the **Acquire** button, **Acqu Mode**, **Length**, **PERF Mode** (only for the oscilloscope with A in the model name) and **Intrpl** is shown in the bottom menu.

The description of the **Acqu Mode** menu is shown as follows:

Function Menu		Setting	Description
Acqu Mode	Sample		Normal sampling mode.
	Peak Detect		Use to capture maximal and minimal samples. Finding highest and lowest points over adjacent intervals. It is used for the detection of the jamming burr and the possibility of reducing the confusion.
	Average	4, 16, 64, 128	It is used to reduce the random and don't-care noises, with the optional number of averages.

The description of the **Record Length** menu is shown as follows:

Function Menu	Setting	Description
Length	1000	Choose the record length
	10K	
	100K	Note: When four channels are turned on, the max record length is 10M; and max 20M for two channels; max 40M for one channel.
	1M	
	10M	
	20M	
	40M	

The description of **PERF Mode** menu (only for the oscilloscope with A in the model name) is shown as follows:

Function Menu	Setting	Description
PERF Mode	8-bit	Set the vertical resolution (A/D)
	12-bit	
	14-bit	

The description of the **Intrpl** menu is shown as follows:

Function Menu	Setting	Description
Intrpl	Sinx/x	Use sine(x)/x interpolation
	x	Use linear interpolation

Interpolation method is a processing method to connect the sampled points, using some points to calculate the whole appearance of the waveform. Select the appropriate interpolation method according to the actual signal.

Sine(x)/x interpolation: Connect the sampled points with curved lines.

Linear interpolation: Connect the sampled points with straight lines. This method is suitable to rebuild the straight-edged signals, such as square or pulse wave.
Figure 4-3 Sine(x)/x interpolation
Figure 4-4 Linear interpolation

How to Set the Display System

Push the **Display** button and the Display menu is shown as follows:

Function Menu	Setting		Description
Type	Dots		Only the sampling points are displayed.
	Vect		The space between the adjacent sampling points in the display is filled with the vector form.
Persist &Color	Persist	OFF 1 Second 2 Seconds 5 Seconds Infinity	Set the persistence time
	Color	ON OFF	Turn on/off the color temperature function
XY Mode	Enable	ON OFF	Turn on/off XY display function
	Full Screen	ON OFF	Turn on/off the full screen view in XY mode
Counter	ON OFF		Turn on/off counter
Clear			Erase the results of previous acquisitions from the display. The oscilloscope will start to accumulate acquisitions again.

Persist

When the **Persist** function is used, the persistence display effect of the picture tube oscilloscope can be simulated. The reserved original data is displayed in fade color and the new data is in bright color.

(1) Push the **Display** button.

(2) Select **Persist** or **Persist&Color** in the bottom menu.

(3) For the model without A, select **Persist** in the right menu.

(4) In the Time menu, select the persist time, including **OFF**, **1 Second**, **2 Seconds, 5 Seconds** and **Infinity**. When the "**Infinity**" option is set for Persist Time**,** the measuring points will be stored till the controlling value is changed. Select **OFF** to turn off persistence and clear the display.

(5) Select **Clear** in the bottom menu to erase the results of previous acquisitions from the display. The oscilloscope will start to accumulate acquisitions again.

Color

Color temperature function uses color-grading to indicate frequency of occurrence. The hot colors like red/yellow indicate frequently occurring events, and the colder colors like blue/green indicate rarely occurring events.

Cold ——————————————————————————————————————➤ Hot
(1) Push the **Display** button.

(2) Select **Persist&Color** in the bottom menu.

(3) Select **Color** in the right menu, choose between **ON/OFF**.
Figure 4-5 The color temperature function is on

XY Format

This format is only applicable to Channel 1 and Channel 2. After the XY display format is selected, Channel 1 is displayed in the horizontal axis and Channel 2 in the vertical axis; the oscilloscope is set in the un-triggered sample mode: the data are displayed as bright spots.

The operations of all control knobs are as follows:

■ The **Horizontal Scale** and the **Horizontal Position** knobs are used to set the horizontal scale and position.

■ The **Vertical Scale** and the **Vertical Position** knobs are used to set the vertical scale and position.

The following functions can not work in the XY Format:

- Reference or digital wave form

- Cursor

- Trigger control

- FFT

Operation steps:

1. Push the **Display** button.

2. Select **XY Mode** in the bottom menu. Select **Enable** as **ON** in the right menu.

3. To make the XY view full screen, select **Full Screen** as **ON** in the right menu.

Counter

It is a 6-digit single-channel counter. The counter can only measure the frequency of the triggering channel. The frequency range is from 2Hz to the full bandwidth. Only if the measured channel is in **Edge** mode of **Single** trigger type, the counter can be enabled. The counter is displayed at the right bottom of the screen.

Operation steps:

1. Push **Trigger Menu** button, set the trigger type to **Single**, set the trigger mode to **Edge**, select the signal source.

2. Push the **Display** button.

3. Select **Counter** as **ON** or **OFF** in the bottom menu.

How to Save and Recall a Waveform

Push the **Save** button, you can save the waveforms, configures, screen images, record or clone the waveform.

The description of the **Save Function Menu** is shown as the following table:

Function Menu	Setting	Description
Type	Wave Configure Image Record Clone	Choose the saving type. About the **Record** type, see "*How to Record/Playback Waveforms*" on P66. About the **Clone** type, see "*How to Clone and Recall a waveform*" on P70.
When the type is **Wave**, the menu shows as following:		
Type Wave	Format (Right menu)	For internal storage, only BIN can be selected. For external storage, the format can be BIN, TXT or CSV.

Source		CH1 CH2 CH3 CH4 Math (or MathFFT)	Check the waveform to be saved. (If certain channel is off, the corresponding menu item will be disabled.)
Object & Show	Object	Wave0 to Wave99	Choose the address which the waveform is saved to or recall from.
	Show	ON OFF	Recall or close the waveform stored in the current object address. When the show is ON, if the current object address has been used, the stored waveform will be shown, the address number and relevant information will be displayed at the top left of the screen; if the address is empty, it will prompt "None is saved".
	Close All		Close all the waveforms stored in the object address.
Save			Save the waveform of the source to the selected address. Whatever the **Type** of save menu is set, you can save the waveform by just pressing the **Copy** panel button in any user interface. Select **Type** in the bottom menu, in the right **Format** menu, you can select the storage format.
Storage		Internal External	Save to internal storage or USB storage. When External is selected, save the waveform according to the current record length (see "*Record Length menu*" on P55); the file name is editable. The BIN waveform file could be open by PeakTech waveform analysis software (on the supplied CD).
When the type is **Configure**, the menu shows as following:			
Configure		Setting1 ….. Setting8	The setting address
Save			Save the current oscilloscope configure to the internal storage
Load			Recall the configure from the selected address
When the type is **Image**, the menu shows as following:			

Save		Save the current display screen. The file can be only stored in a USB storage, so a USB storage must be connected first. The file name is editable. The file is stored in BMP format.

Save and Recall the Waveform

The oscilloscope can store 100 waveforms, which can be displayed with the current waveform at the same time. The stored waveform called out can not be adjusted.

In order to save the waveform of CH1, CH2 and Math into the address 1, the operation steps should be followed:

1. Turn on CH1, CH2 and Math channels.

2. Push the **Save** button.

3. **Saving**: Select **Type** in the bottom menu, select **Wave** in the left menu.

4. Select **Storage** in the bottom menu, select **Internal** in the right menu.

5. Select **Source** in the bottom menu, check **CH1**, **CH2**, **Math** in the right menu for Source.

6. Select **Object & Show** in the bottom menu, select **Wave1** as object address in the left menu.

7. Select **Save** in the bottom menu to save the waveform.

8. **Recalling**: Select **Object & Show** in the bottom menu, select **Wave1** in the left menu. In the right menu, select **Show** as **ON**, the waveform stored in the address will be shown, the address number and relevant information will be displayed at the top left of the screen.

In order to save the waveform of CH1 and CH2 into the USB storage as a BIN file, the operation steps should be followed:

1. Turn on CH1 and CH2 channels.

2. Push the **Save** button.

3. **Saving**: Select **Type** in the bottom menu, select **Wave** in the left menu.

4. Select **Storage** in the bottom menu, select **External** in the right menu.

5. Select **Type** in the bottom menu, select **BIN** in the right menu as the storage format.

6. Select **Source** in the bottom menu, check **CH1**, **CH2** in the right menu for Source.

7. Select **Save** in the bottom menu, an input keyboard used to edit the file name will

pop up. The default name is current system date and time. Select the ⏎ key in the keyboard to confirm.

8. **Recalling**: The BIN waveform file could be open by PeakTech waveform analysis software (on the supplied CD).

Tip:

Whatever the **Type** of save menu is set, you can save the waveform by just pressing the **Copy** panel button in any user interface. If the **Storage** of the save menu is set as "**External**", you should install the USB disk. Please refer to the contents below to install the USB disk and name the file to be saved.

Save the current screen image:

The screen image can only be stored in USB disk, so you should connect a USB disk with the instrument.

1. **Install the USB disk**: Insert the USB disk into the "**USB Host port**" of "*Figure 3-1 Front panel*". If an icon ⚡ appears on the top right of the screen, the USB disk is installed successfully. If the USB disk cannot be recognized, format the USB disk according to the methods in "*USB disk Requirements*" on P62.

2. After the USB disk is installed, push the **Save** panel button, the save menu is displayed at the bottom of the screen.

3. Select **Type** in the bottom menu, select **Image** in the left menu.

4. Select **Save** in the bottom menu, an input keyboard used to edit the file name will pop up. The default name is current system date and time. Select the ⏎ key in the keyboard to confirm.

USB disk Requirements

The supported format of the USB disk: FAT32 file system, the allocation unit size cannot exceed 4K, mass storage USB disk is also supported. If the USB disk doesn't work properly, format it into the supported format and try again. Follow any of the following two methods to format the USB disk: using system-provided function and using the formatting tools. (The USB disk of 8 G or 8 G above can only be formatted using the second method – using the formatting tools.)

Use system-provided function to format the USB disk

1. Connect the USB disk to the computer.
2. Right click **Computer**-→ **Manage** to enter Computer Management interface.
3. Click Disk Management menu, and information about the USB disk will display on the right side with red mark 1 and 2.
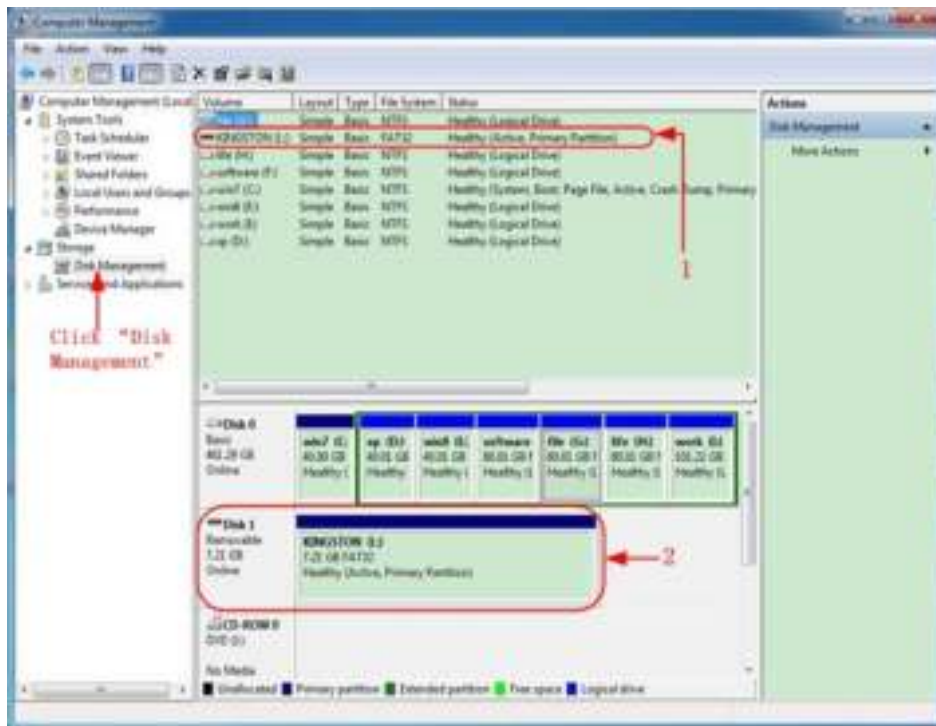

Figure 4-6: Disk Management of computer

4. Right click 1 or 2 red mark area, choose **Format**. And system will pop up a warning message, click **Yes**.

Figure 4-7: Format the USB disk warning

5. Set File System as FAT32, Allocation unit size 4096. Check "**Perform a quick format**" to execute a quick format. Click **OK**, and then click **Yes** on the warning message.
Figure 4-8: Formatting the USB disk setting

6. Formatting process.
Figure 4-9: Formatting the USB disk

7. Check whether the USB disk is FAT32 with allocation unit size 4096 after formatting.

Use Minitool Partition Wizard to format

Download URL: **http://www.partitionwizard.com/free-partition-manager.html**
Tip: There are many tools for the USB disk formatting on the market, just take Minitool Partition Wizard for example here.

1. Connect the USB disk to the computer.
2. Open the software **Minitool Partition Wizard.**

64

3. Click **Reload Disk** on the pull-down menu at the top left or push keyboard F5, and information about the USB disk will display on the right side with red mark 1 and 2.
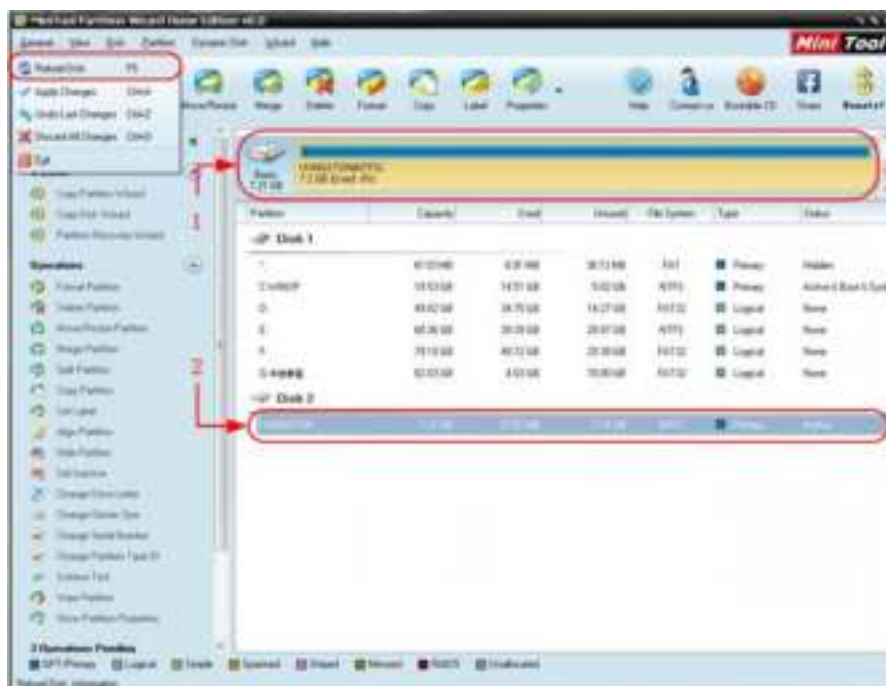

Figure 4-10: Reload Disk

4. Right click 1 or 2 red mark area, choose **Format**.

Figure 4-11: Choose format

5. Set File System FAT32, Cluster size 4096. Click **OK**.

Figure 4-12: Format setting

6. Click **Apply** at the top left of the menu. Then click **Yes** on the pop-up warning to begin formatting.

Figure 4-13: Apply setting

7. Formatting process

Figure 4-14: Format process

8. Format the USB disk successfully

Figure 4-15: Format successfully

How to Record/Playback Waveforms

Push **Save** button. Select **Type** in the bottom menu, in the left menu, turn the **M** knob to select **Record**.

Wave Record function can record the input current wave. You can set the interval between recorded frames in the range of 10 ms - 10 s. The max frame number reaches 1000, and you can get better analysis effect with playback and storage function. The

storage medium contains two kinds: Internal and External.

When the storage medium is Internal, Wave Record contains four modes: **OFF**, **Record**, **Playback** and **Storage**.

When storage medium is External, Wave Record contains two modes: **OFF, Record.**

Record: To record wave according to the interval until it reaches the end frame set.

Record menu (Internal Storage) shows as follows:

Menu	Setting	Instruction
Mode	OFF	Close wave record function
	Record	Set record menu
	Playback	Set playback menu
	Storage	Set storage menu
Record mode FrameSet	End frame	Turn the **M** knob to select the number of frames to record (1 - 1000)
	Interval	Turn the **M** knob to select the interval between recorded frames (10ms - 10s)
Refresh	ON	Refresh wave during recording
	OFF	Stop refreshing
Operate	Play	Begin to record
	Stop	Stop recording

Note:

Both of the waveforms of Channel 1 and Channel 2 will be recorded. If a Channel is turned off while recording, the waveform of the channel is invalid in the playback mode.

Playback: Play back the wave recorded or saved.

Playback menu shows as follows:

Menu	Setting	Instruction
Playback Mode FrameSet	Start frame	Turn the **M** knob to select the number of start frame to playback (1 - 1000)
	End frame	Turn the **M** knob to select the number of end frame to playback (1 - 1000)
	Cur frame	Turn the **M** knob to select the number of current frame to playback (1 - 1000)
	Interval	Turn the **M** knob to select the interval between played back frames (10ms - 10s)
Play mode	Loop	Play back the wave continuously
	Once	Play back the wave just one time
Operate	Play	Begin to record
	Stop	Stop recording

Storage: Save the current wave according to the start frame and end frame set.

Storage menu shows as follows:

Menu	Setting	Instruction
Storage Mode Frame Set	Start frame	Turn the **M** knob to select the number of start frame to store (1 - 1000)
	End frame	Turn the **M** knob to select the number of end frame to store (1 - 1000)
Save		Save the waveform record file to the internal memory
Load		Load the waveform record file from the memory

To use wave record function, do as follows:
(1) Push **Save** button.
(2) Select **Type** in the bottom menu, in the left menu, turn the **M** knob to select **Record**.
(3) Select **Mode** in the bottom menu, select **OFF** in the right menu.
(4) In the bottom menu, select **Storage** as **Internal**.
(5) Select **Mode** in the bottom menu, select **Record** in the right menu.
(6) Select **FrameSet** in the bottom menu, set **End frame** and **Interval** in the right menu.
(7) In the bottom menu, set **Refresh**.
(8) In the bottom menu, select **Operate** as **Play**.
(9) Select **Mode** in the bottom menu, select **Playback** in the right menu. Set **FrameSet** and **Playmode**, select **Operate** as **Play**.
(10) To save the wave recorded, select **Mode** in the bottom menu, select **Storage** in the right menu. Select **FrameSet** in the bottom menu to set the range of frames to store, select **Save** in the bottom menu.
(11) To load the waveform from the internal memory, select **Load** in the bottom menu, then enter the **Playback** of the **Mode** to analyze the wave.

Note: When playbacking the waveform, the sampling, trigger, or display function is not available.

When storage medium is External, Wave Record contains two modes: OFF, Record.
Record menu (External Storage) shows as follows:

Menu	Setting	Instruction
Mode	OFF	Close wave record function
	Record	Set record menu
Record mode FrameSet	End frame	Turn the **M** knob to select the number of frames to record (1 － 900,000)
	Interval	Turn the **M** knob to select the interval between recorded frames (10ms - 10s)
	Infinity	Record infinitely until the storage medium is full
Refresh	ON	Refresh wave during recording
	OFF	Stop refreshing

Operate	Play	Begin to record
	Stop	Stop recording

Note:

Both of the waveforms of Channel 1 and Channel 2 will be recorded. If a Channel is turned off while recording, the waveform of the channel is invalid in the playback mode.

To use wave record to external, do as follows:

1. Push **Save** button.
2. Select **Type** in the bottom menu, in the left menu, turn the **M** knob to select **Record**.
3. Select **Mode** in the bottom menu, select **OFF** in the right menu.
4. In the bottom menu, select **Storage** as **External**.
5. Select **Mode** in the bottom menu, select **Record** in the right menu.
6. Select **FrameSet** in the bottom menu, set **End frame** and **Interval** in the right menu. If you want to record wave to external infinitely, select **Infinity** in the right menu, the End frame will display "-".
7. In the bottom menu, set **Refresh**.
8. In the bottom menu, select **Operate** as **Play**.

Connect external device to the computer, and *wave_record_0.bin* is the recorded file. Open the software, and do as follows to play back the waveform.

1. Choose Communications → Auto Player.
2. Transform recording waveform from machine.
3. Add the well transformed files.
4. Set play mode and time delay.
5. Click the green button on the left corner to begin playing back the waveform.
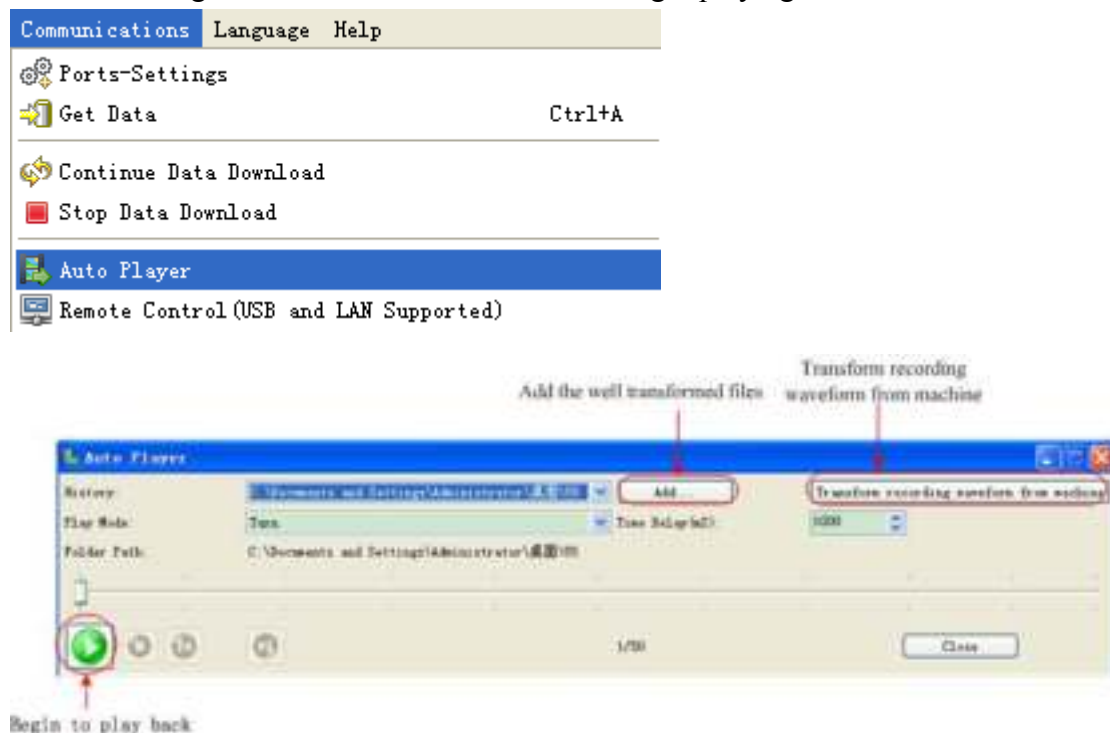

Figure 4-16: Play back waveform by software

How to Clone and Recall a waveform

Push **Save** button. Select **Type** in the bottom menu, in the left menu, turn the **M** knob to select **Clone**.
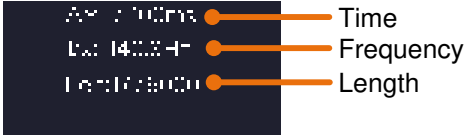

You can clone one or two channel waveforms between two cursors, and save it as a cloned waveform into the internal memory or a USB memory device. You can save four cloned waveforms in the instrument internal memory. The cloned waveform files saved to a USB memory device are saved with the extension "ota".

If the optional Arbitrary Function Generator is available in your instrument, you can output the stored waveform from a file in the internal memory or in a USB memory device; and the waveform between two cursors can be output directly without save operation.

You can also use PeakTech 4125 or 4165 signal generator to read *.ota files and recall the cloned waveforms.

Clone Wave menu shows as follows:
Menu	Setting	Instruction
Type	Clone	Select the clone function.
Source	Mode Out1 Out2 Out1&Out2	Select the source mode. The cloned waveform includes one waveform, which will be used for AG Out1 The cloned waveform includes one waveform, which will be used for AG Out2 The cloned waveform includes two waveforms, which will be used for AG Out1 and AG Out2
	AG Output Out1 CH1 CH2 CH3 CH4	Select the source, which will be used for AG Out1
	AG Output Out2 CH1 CH2 CH3 CH4	Select the source, which will be used for AG Out2

Line	a	Turn the **M** knob to move line a.	
	b	Turn the **M** knob to move line b.	
	ab	Two cursors are linked. Turn the **M** knob to move the pair of cursors.	
	x	Set the cursors to select the entire screen automatically.	
		The waveform information is displayed at the left bottom corner of the screen. **Note**: If "**Out Of Limits**" appears in the information or a message "**Waveform points beyond the limit.**" appears on the screen, that means the length of the cloned waveform exceeds the limit. When the source mode is Out1 or Out2, the maximum length is 2M; When the source mode is Out1&Out2, the maximum length is 1M. Push the **Acquire** button, select **Length** in the bottom menu, and set the record length to a smaller value.	
Clone (When the generator is available)	Clone	Clone the waveform between two cursors, and output it through the built-in generator.	
Save	Save	Save the waveform between two cursors	
	Storage	Internal	You can select one of the four objects in the left list. When selecting a object, a message will appear in the screen center, show the information of the selected object. **"Current object: Out1 have no output, Out2 have no output"** means no waveform is stored in this object. **"Current object: Out1 have output, Out2 have no output"** means one waveform is stored in this object, its source mode is Out1. **"Current object: Out1 have no output, Out2 have output"** means one waveform is stored in this object, its source mode is Out2. **"Current object: Out1 have output, Out2 have output"** means two waveforms are stored in this object, its source mode is Out1&Out2.

		Save the waveform onto a USB memory device
	External	Insert a USB memory device into the port on the front panel. If the icon appears on the top right of the screen, the USB memory device is installed successfully. If the USB memory device cannot be recognized, format the USB memory device according to the methods in "*USB disk Requirements*" on P62. The name is default as current system date and time. The cloned waveform will be saved onto the USB memory device as a OTA file.
	Output	(Generator is available and internal storage is selected) Output the waveform stored in the selected object.

The following steps take oscilloscope with dual-channel AG for instance. To

save the CH1 waveform and save to the internal/USB memory:

(1) Push **Save** button.
(2) Select **Type** in the bottom menu, turn the **M** knob to select **Clone** in the left menu.
(3) Select **Source** in the bottom menu, select **Mode** as **Out1**. in the right menu.

(4) Select **AG Output Out1** as **CH1**. in the right menu.

(5) Select **Line** in the bottom menu. If **a** or **b** is selected, turn the **M** knob to move the cursor. If **ab** is selected, turn the **M** knob to move the pair of cursors. If **x** is selected, the entire screen will be selected automatically.

(6) Select **Save** in the bottom menu.
   ● **To save the waveform to internal memory**, select **Storage** in the right menu as **Internal**. Turn the **M** knob to select an object in the left menu, select **Save** in the right menu.
   ● **To save the waveform onto a USB memory device**, select **Storage** in the right menu as **External**. Select **Save** in the right menu. An input keyboard used to edit the file name will pop up. Turn the **M** knob to select the keys, push the knob to input. Select the key in the keyboard to confirm. The cloned waveform will be saved onto the USB memory device as a OTA file.

To output the waveform stored in the internal memory through the generator:
(The generator is optional.)

(1) Push **Save** button.
(2) Select **Type** in the bottom menu, turn the **M** knob to select **Clone** in the left menu.
(3) Select **Save** in the bottom menu, select **Storage** as **Internal** in the right menu.
(4) Turn the **M** knob to select an object in the left menu.

(5) Select **Output** in the right menu.

To output the waveform stored in the USB memory device through the generator:
(The generator is optional.)

(1) Push [CH1/2] button to set the output channel of the generator.

(2) Select **Arb** in the bottom menu, select **Others** in the right menu, and select **File Browse**.

(3) select **Memory** in the right menu as **USB**. The instrument lists a directory of the folders and files on the USB memory device. Select a folder or file using the **M** knob to scroll up and down the list. To enter the current folder, select **Change Dir** in the right menu, select it again to return to the upper directory.

(4) Select the desired ota file, select **Read** in the right menu.

To output the CH1 and CH2 waveforms through the generator directly:
(The generator is optional.)

(1) Push **Save** button.

(2) Select **Type** in the bottom menu, turn the **M** knob to select **Clone** in the left menu.

(3) Select **Source** in the bottom menu, select **Mode** as **Out1&Out2** in the right menu.

(4) In the right menu, select **AG Output Out1** as **CH1**; select **AG Output Out2** as **CH2**.

(5) Select **Line** in the bottom menu. Select the cursor and move it to select the desired waveform.

(6) Select **Clone** in the bottom menu. The generator will output the waveform between two cursors.

Data format description of OTA waveform file

If the source mode is set to Out1 or Out2, OTA file consists of two parts: the file header and the channel data. If the source mode is set to Out1&Out2, OTA file consists of three parts: file header, the first channel data, and the second channel data. The file header represents the parameter of file data, which is expressed in "parameter name + value". Each parameter name is a case-sensitive string of 4 bytes. The parameter value is at least 4 bytes.

1.Format description of the file header:

1)   HEAD

Parameter name	Meaning	Value	Comment
HEAD	Header size	4 bytes int	

2)   TYPE

Parameter name	Meaning	Value	Comment
TYPE	Model	12 bytes char	

3)   BYTE

Parameter name	Meaning	Value	Comment
BYTE	Data length in bit	4 bytes int	

4) SIZE

Parameter name	Meaning	Value	Comment
SIZE	File size	4 bytes int	Used to check the file integrity

5) VOLT

Parameter name	Meaning	Value	Comment
VOLT	Voltage division, divided by 400 is ADC resolution. (When the source mode is Out1&Out2, it is the first channel voltage division.)	4 bytes float	The value indicates voltage (the unit is mV), such as 200 mV.

6) SAMP

Parameter name	Meaning	Value	Comment
SAMP	Sample rate	4 bytes float	The unit is Sa/s.

7) ADCB

Parameter name	Meaning	Value	Comment
ADCB	ADC bit, ADC resolution	4 bytes int	8-bit or 12-bit

8) CHAN

Parameter name	Meaning	Value	Comment
CHAN	Number of channels	4 bytes int	1 or 2

9) VOL2

Parameter name	Meaning	Value	Comment
VOL2	Voltage division, divided by 400 is ADC resolution. (When the source mode is Out1&Out2, it is the second channel voltage division.)	4 bytes float	The value indicates voltage (the unit is mV), such as 200 mV.

2.Data

The data type is signed integer. You can determine the data type (**char**, **short int** or **int)** based on the BYTE parameter. The valid range is determined by the ADCB parameter, e.g. the valid range for 8-bit ADC is -127 to +127.

How to Implement the Auxiliary System Function Setting

●**Config**

Push the **Utility** button, select **Function** in the bottom menu, select **Configure** in the left menu.

The description of **Configure Menu** is shown as the follows:

Function Menu	Setting		Description
Language	Chinese English Others		Choose the display language of the operating system.
Set Time	Display	ON OFF	On/Off the date display
	Hour Min		Setting Hour/Minute
	Day Month		Setting Date/Month
	Year		Setting Year
KeyLock			Lock all keys. Unlock method: push **Trigger Menu** button in trigger control area, then push **Force** button, repeat 3 times.
About			Version number and serial number showing

●Display

Push the **Utility** button, select **Function** in the bottom menu, select **Display** in the left menu.

The description of **Display Menu** is shown as the follows:

Function Menu	Setting	Description
BackLight	0% - 100%	Turn the **M** knob to adjust the backlight.
Graticule		Select the grid type
Battery	ON OFF	Turn on or off the battery display
Menu Time	OFF, 5s - 30s	Set the disappear time of menu

●**Adjust**

Push the **Utility** button, select **Function** in the bottom menu, select **Adjust** in the left menu.

The description of **Adjust Menu** is shown as the follows:

Function Menu	Description
Self Cal	Carry out the self-calibration procedure.

Default	Call out the factory settings.
ProbeCh.	Check whether probe attenuation is good.

Do Self Cal (Self-Calibration)

The self-calibration procedure can improve the accuracy of the oscilloscope under the ambient temperature to the greatest extent. If the change of the ambient temperature is up to or exceeds 5℃, the self-calibration procedure should be executed to obtain the highest level of accuracy.

Before executing the self-calibration procedure, disconnect all probes or wires from the input connector. Push the **Utility** button, select **Function** in the bottom menu, the function menu will display at the left, select **Adjust**. If everything is ready, select **Self Cal** in the bottom menu to enter the self-calibration procedure of the instrument.

Probe checking

To check whether probe attenuation is good. The results contain three circumstances: Overflow compensation, Good compensation, Inadequate compensation. According to the checking result, users can adjust probe attenuation to the best. Operation steps are as follows:
1. Connect the probe to CH1, adjust the probe attenuation to the maximum.
2. Push the **Utility** button, select **Function** in the bottom menu, select **Adjust** in the left menu.
3. Select **ProbeCh.** in the bottom menu, tips about probe checking shows on the screen.
4. Select **ProbeCh.** again to begin probe checking and the checking result will occur after 3s; push any other key to quit.

● **Pass/Fail**

The **Pass/Fail** function monitors changes of signals and output pass or fail signals by comparing the input signal that is within the pre-defined mask.

Push the **Utility** button, select **Function** in the bottom menu, select **Pass/fail** in the left menu.

The description of **Pass/fail Menu** is shown as the follows:

Function Menu	Setting	Description
operate	Enable	Control enable switch
	Operate	Control operate switch
Output	Pass	Signal tested corresponds with the rule
	Fail	Signal tested not correspond with the rule
	Beep	Beep when it satisfies the rule
	Stop	Stop once satisfying the rule
	Info	Control the display status of info frame
Rule	Source	Select the source as CH1, CH2, CH3 or CH4
	Horizontal	Change the Horizontal tolerance value by turning the **M** knob
	Vertical	Change the Vertical tolerance value by turning the **M** knob
	Create	Use the rule set as testing rule
SaveRule	Number	Select any one from Rule1 - Rule8 as your rule name
	Save	Select **Save** to save the rule
	Load	Load some rule as the testing rule

Pass/Fail test:

Detect whether the input signal is within the limits of the rule, if it exceeds limits of the rule, it is "Fail"; otherwise it is "Pass". Also it can output fail or pass signal by built-in and configurable output port. To run the test, read the following steps:

1. Push the **Utility** button, select **Function** in the bottom menu, select **Pass/fail** in the left menu.
2. **Enable switch on**: Select **Operate** in the bottom menu, select **Enable** in the right menu as **ON**.
3. **Create rule**: Select **Rule** in the bottom menu. Select **Source** in the right menu, select the source in the left menu. Set **Horizontal** tolerance and **Vertical** tolerance in the right menu. Select **Create** in the right menu to create the rule.
4. **Set output type**: Select **Output** in the bottom menu to enter output option setting. Choose any one or two of the options "**Pass**", "**Fail**" or "**Beep**". "**Pass**" and "**Fail**" are mutually exclusive options, which could not be chosen simultaneously. "**Stop**" means stop once the condition satisfies your setting.
5. **Begin to test:** Select **Operate** in the bottom menu, select **Operate** in the right menu as **Start**, the test will begin.
6. **Save rule:** Select **SaveRule** in the bottom menu. Select the save location in the left menu, and then select **Save** in the right menu to save the rules, which could be called up at once when need. Select **Load** to call up the rule saved.

Note:
1. When Pass/Fail is ON, if XY or FFT is ready to run, then Pass/Fail will be closed; under the mode of XY or FFT, Pass/Fail is unable.
2. Under the mode of Factory, Auto Scale and Auto Set, Pass/Fail will be closed.
3. When no save setting left in the rule save, tip will be given to show "NO RULE SAVED".

4. Under the status of stop, data comparing will stop, and when it goes on running, the number of Pass/Fail will increase from the former number, not from zero.

5. When the waveform playback mode is on, Pass/Fail is used to test the played-back waveform specially.

● **Output**

Push the **Utility** button, select **Function** in the bottom menu, select **Output** in the left menu.

Output menu item in the bottom menu sets the output type of Trig Out(P/F) port on *Rear Panel*. In the bottom menu, select **Output**. The description of **Output menu** is shown as the follows:

Function Menu	Setting	Description
Type	Trig level	Output trig signal synchronously
	Pass/fail	Output High Level when Pass , and Low Level when Fail
	AG Output	CH2 Output of dual-channel waveform generator (optional)

VGA menu item in the bottom menu sets the output of VGA port. Connect the VGA port to an external monitor or projector. Turn on the VGA port in this menu, the oscilloscope display can be shown on an external monitor or projector.

Device and **Print Setup** menu items set the print output, refer to "*How to Print the Screen Image*" on page 91.

● **LAN Set**

Using the LAN port or Wi-Fi, the oscilloscope can be connected with a computer. The oscilloscope also supports communications with Android based smart device via Wi-Fi. Refer to "*Communication with PC*" on page 107 and "*Communication with Android Device via Wi-Fi (Optional)*" on page 115 for the operation steps.

● **Update**

Use the front-panel USB port to update your instrument firmware using a USB memory device. Refer to "*How to Update your Instrument Firmware*" on page 78.

● **DAQ**

You can use the multimeter data recorder to record the measurements when measuring current/voltage by multimeter. Refer to "*Multimeter Recorder*" on page 104.

How to Update your Instrument Firmware

Use the front-panel USB port to update your instrument firmware using a USB

memory device.

USB memory device requirements: Insert a USB memory device into the USB port on the front panel. If the icon 🔌 appears on the top right of the screen, the USB memory device is installed successfully. If the USB memory device cannot be detected, format the USB memory device according to the methods in "*USB disk Requirements*" on P62.

Caution: Updating your instrument firmware is a sensitive operation, to prevent damage to the instrument, do not power off the instrument or remove the USB memory device during the update process.

To update your instrument firmware, do the following:

1. Push the **Utility** button, select **Function** in the bottom menu, select **Configure** in the left menu, select **About** in the bottom menu. View the model and the currently installed firmware version.
2. From a PC, visit www.PeakTech.de and check if the website offers a newer firmware version. Download the firmware file. The file name must be Scope.update. Copy the firmware file onto the root directory of your USB memory device.
3. Insert the USB memory device into the front-panel USB port on your instrument.
4. Push the **Utility** button, select **Function** in the bottom menu, select **Update** in the left menu.
5. In the bottom menu, select **Start**, the messages below will be shown.

6. In the bottom menu, select **Start** again, the interfaces below will be displayed in sequence. The update process will take up to three minutes. After completion, the instrument will be shut down automatically.
7. Long press the ⏻ button to power on the instrument.

How to Measure Automatically

Push the **Measure** button to display the menu for the settings of the Automatic Measurements. At most 8 types of measurements could be displayed on the bottom left of the screen.

The oscilloscopes provide 31 parameters for auto measurement, including Period, Frequency, Mean, PK-PK, RMS, Max, Min, Top, Base, Amplitude, Overshoot, Preshoot, Rise Time, Fall Time, +PulseWidth, -PulseWidth, +Duty Cycle, -Duty Cycle, Delay A→B⌐, Delay A→B⌐, Cycle RMS, Cursor RMS, Screen Duty, Phase A→B ⌐ , Phase A→B ⌐ , +PulseCount, -PulseCount, RiseEdgeCnt, FallEdgeCnt, Area, and Cycle Area.

The "Automatic Measurements" menu is described as the following table:

Function Menu		Description
Add	Meas Type (left menu)	Select the measure types
	Source CH1 CH2 CH3 CH4	Select the source
	Add	Add the selected measure types (shown at the left bottom, you could only add 8 types at most)
Remove	Meas Type (left menu)	Select the types need to be deleted. The selected type and source are shown in the **Remove** menu on the right.
	Remove	Remove the selected measure type
	Remove All	Remove all the measures
Snapshot	ON OFF	Show all the measures of the snapshot source Turn off the snapshot
Source	CH1 CH2 CH3 CH4	Select the snapshot source

Measure

Only if the waveform channel is in the ON state, the measurement can be performed.

The automatic measurement can not be performed in the following situation: 1) On the saved waveform. 2) On Waveform Math waveform. 3) On the Video trigger mode.

On the Scan format, period and frequency can not be measured.

Measure the period, the frequency of the CH1, following the steps below:

1. Push the **Measure** front panel button to show the Measure menu.

2. Select **Add** in the bottom menu.

3. In the left Type menu, turn the **M** knob to select **Period**.

4. In the right menu, select **CH1** in the **Source** menu item.

5. In the right menu, select **Add**. The period type is added.

6. In the left Type menu, turn the **M** knob to select **Frequency**.

7. In the right menu, select **CH1** in the **Source** menu item.

8. In the right menu, select **Add**. The frequency type is added.

The measured value will be displayed at the bottom left of the screen automatically (see *Figure 4-17*).
Figure 4-17 Automatic measurement

The automatic measurement of voltage parameters

The oscilloscopes provide automatic voltage measurements including Mean, PK-PK, RMS, Max, Min, Vtop, Vbase, Vamp, OverShoot, PreShoot, Cycle RMS, and Cursor RMS. *Figure 4-18* below shows a pulse with some of the voltage measurement points.
Figure 4-18

Mean: The arithmetic mean over the entire waveform.

PK-PK: Peak-to-Peak Voltage.

RMS: The true Root Mean Square voltage over the entire waveform.

Max: The maximum amplitude. The most positive peak voltage measured over the entire waveform.

Min: The minimum amplitude. The most negative peak voltage measured over the entire waveform.

Vtop: Voltage of the waveform's flat top, useful for square/pulse waveforms.

Vbase: Voltage of the waveform's flat base, useful for square/pulse waveforms.

Vamp: Voltage between Vtop and Vbase of a waveform.

OverShoot: Defined as (Vmax-Vtop)/Vamp, useful for square and pulse waveforms.

PreShoot: Defined as (Vmin-Vbase)/Vamp, useful for square and pulse waveforms.

Cycle RMS: The true Root Mean Square voltage over the first entire period of the waveform.

Cursor RMS: The true Root Mean Square voltage over the range of two cursors.

The automatic measurement of time parameters

The oscilloscopes provide time parameters auto-measurements include Period, Frequency, Rise Time, Fall Time, +D width, -D width, +Duty, -Duty, Delay A→B ⅎ, Delay A→B ⅏, Screen Duty , Phase A→B ⅎ, and Phase A→B ⅏.

Figure 4-19 shows a pulse with some of the time measurement points.
Figure 4-19

Rise Time: Time that the leading edge of the first pulse in the waveform takes to rise from 10% to 90% of its amplitude.

Fall Time: Time that the falling edge of the first pulse in the waveform takes to fall from 90% to 10% of its amplitude.

+D width: The width of the first positive pulse in 50% amplitude points.

-D width: The width of the first negative pulse in the 50% amplitude points.

+Duty: +Duty Cycle, defined as +Width/Period.

-Duty:-Duty Cycle, defined as -Width/Period.

Delay A→B ⅎ **:** The delay between the two channels at the rising edge.

Delay A→B ⅂ **:** The delay between the two channels at the falling edge.

Screen Duty: Defines as (the width of the positive pulse)/(Entire period)

Phase A→B ⅎ **:** Phase difference calculated according to " Delay A→B ⅎ " and the period of source A, expressed in degree. The calculation formula is as shown below:

$$\text{Phase } A{\rightarrow}B\,ⅎ = (\text{Delay } A{\rightarrow}B\,ⅎ \div \text{ Period of source A}) \times 360°$$

Phase A→B ⅂ **:** Phase difference calculated according to " Delay A→B ⅂ " and the period of source A, expressed in degree. The calculation formula is as shown below:

$$\text{Phase } A{\rightarrow}B\,⅂ = (\text{Delay } A{\rightarrow}B\,⅂ \div \text{ Period of source A}) \times 360°$$
Other measurements

+PulseCount ⎍ : The number of positive pulses that rise above the mid reference crossing in the waveform.

-PulseCount ⎍ : The number of negative pulses that fall below the mid

reference crossing in the waveform.

RiseEdgeCnt : The number of positive transitions from the low reference value to the high reference value in the waveform.

FallEdgeCnt : The number of negative transitions from the high reference value to the low reference value in the waveform.

Area : The area of the whole waveform within the screen and the unit is voltage-second. The area measured above the zero reference (namely the vertical offset) is positive; the area measured below the zero reference is negative. The area measured is the algebraic sum of the area of the whole waveform within the screen.

Cycle Area : The area of the first period of waveform on the screen and the unit is voltage-second. The area above the zero reference (namely the vertical offset) is positive and the area below the zero reference is negative. The area measured is the algebraic sum of the area of the whole period waveform.
Note: When the waveform on the screen is less than a period, the period area measured is 0.

How to Measure with Cursors

Push the **Cursor** button to turn cursors on and display the cursor menu. Push it again to turn cursors off.

The Cursor Measurement for normal mode:

The description of the **cursor menu** is shown as the following table:

Function Menu	Setting	Description
Type	Voltage	Display the voltage measurement cursor and menu.
	Time	Display the time measurement cursor and menu.
	Time&Voltage	Display the time and voltage measurement cursor and menu.
	AutoCursr	The horizontal cursors are set as the intersections of the vertical cursors and the waveform
Line Type (Time&Voltage type)	Time	Makes the vertical cursors active.
	Voltage	Makes the horizontal cursors active.
Window (Wave zoom mode)	Main	Measure in the main window.
	Extension	Measure in the extension window.
Line	a	Turn the **M** knob to move line a.
	b	Turn the **M** knob to move line b.
	ab	Two cursors are linked. Turn the **M** knob to move the pair of cursors.

Source	CH1 to CH4	Display the channel to which the cursor measurement will be applied.

Perform the following operation steps for the time and voltage cursor measurement of the channel CH1:

1. Push **Cursor** to display the cursor menu.

2. Select **Source** in the bottom menu, select **CH1** in the right menu.

3. Select the first menu item in the bottom menu, the **Type** menu will display at the right of the screen. In the right menu, select **Time&Voltage** for Type, two blue dotted lines displayed along the horizontal direction of the screen, two blue dotted lines displayed along the vertical direction of the screen. Cursor measure window at the left bottom of the screen shows the cursor readout.

4. In the bottom menu, select **Line Type** as **Time** to make the vertical cursors active. If the **Line** in the bottom menu is select as **a**, turn the **M** knob to move line a to the right or left. If **b** is selected, turn the **M** knob to move line b.

5. In the bottom menu, select **Line Type** as **Voltage** to make the horizontal cursors active. Select **Line** in the bottom menu as **a** or **b**, turn the **M** knob to move it.

6. Push the **Horizontal HOR** button to enter wave zoom mode. In the bottom cursor menu, select **Window** as **Main** or **Extension** to make the cursors shown in the main window or zoom window.

Figure 4-20 Time&Voltage Cursor Measurement

Auto Cursor

For the AutoCursr type, the horizontal cursors are set as the intersections of the vertical cursors and the waveform.

85

Figure 4-21 Auto Cursor

The Cursor Measurement for FFT mode

In FFT mode, push the **Cursor** button to turn cursors on and display the cursor menu.

The description of the **cursor menu** in FFT mode is shown as the following table:

Function Menu	Setting	Description
Type	Vamp	Display the Vamp measurement cursor and menu.
	Freq	Display the Freq measurement cursor and menu.
	Freq&Vamp	Display the Freq and Vamp measurement cursor and menu.
	AutoCursr	The horizontal cursors are set as the intersections of the vertical cursors and the waveform
Line Type (Freq&Vamp type)	Freq	Makes the vertical cursors active.
	Vamp	Makes the horizontal cursors active.
Window (Wave zoom mode)	Main	Measure in the main window.
	Extension	Measure in the FFT extension window.
Line	a	Turn the **M** knob to move line a.
	b	Turn the **M** knob to move line b.
	ab	Two cursors are linked. Turn the **M** knob to move the pair of cursors.
Source	Math FFT	Display the channel to which the cursor measurement will be applied.

Perform the following operation steps for the amplitude and frequency cursor measurement of math FFT:

1. Press the **Math** button to display the math menu in the bottom. Select **FFT**.

2. Push **Cursor** to display the cursor menu.

3. In the bottom menu, select **Window** as **Extension**.

4. Select the first menu item in the bottom menu, the **Type** menu will display at the right of the screen. In the right menu, select **Freq&Vamp** for Type, two blue dotted lines displayed along the horizontal direction of the screen, two blue dotted lines displayed along the vertical direction of the screen. Cursor measure window at the left bottom of the screen shows the cursor readout.

5. In the bottom menu, select **Line Type** as **Freq** to make the vertical cursors active. If the **Line** in the bottom menu is select as **a**, turn the **M** knob to move line a to the right or left. If **b** is selected, turn the **M** knob to move line b.

6. In the bottom menu, select **Line Type** as **Vamp** to make the horizontal cursors active. Select **Line** in the bottom menu as **a** or **b**, turn the **M** knob to move it.

7. In the bottom cursor menu, you can select **Window** as **Main** to make the cursors shown in the main window.

How to Use Autoscale

This is a very useful function for first time users to carry out a simple and quick test on the input signal. The function is applied to follow-up signals automatically even if the signals change at any time. Autoscale enables the instrument to set up trigger mode, voltage division and time scale automatically according to the type, amplitude and frequency of the signals.
The menu is as follows:

Function Menu	Setting	Instruction
Autoscale	ON	Turn on Autoscale.
	OFF	Turn off Autoscale.
Mode		Follow-up and adjust both vertical and horizontal settings.
		Follow-up and only adjust horizontal scale.
		Follow-up and only adjust vertical scale.
Wave		Show Multi-period waveforms.
		Only show one or two periods.

To measure the signal using autoscale, you can do as the follows:

1. Push the **Autoscale** button, the function menu will appear.

2. In the bottom menu, select **ON** in the **Autoscale** menu item.
3. In the bottom menu, Select **Mode**. In the right menu, select [image].
4. In the bottom menu, Select **Wave**. In the right menu, select [image].

Then the wave is displayed in the screen, shown as *Figure 4-22*.

Figure 4-22 Autoscale Horizontal-Vertical multi-period waveforms

Note:
1. When entering into Autoscale function, a autoscale indicator will be flickering on the top left of the screen.
2. In the mode of Autoscale, the oscilloscope can self-estimate Trigger Mode (Edge, Video). At this point, the trigger menu is not available.
3. When the input signal contains the DC component, the coupling will be set to AC, the amplitude of the input signal should be greater than 5mV, and the frequency should be greater than 20Hz.
4. At the mode of Autoscale, DSO is always set as DC coupling with AUTO triggering, the holdoff is set to 100ns.
5. At the mode of Autoscale, if adjust the vertical position, voltage division, trigger level or time scale, the oscilloscope will pause the Autoscale function. To resume Autoscale, push the **Autoset** front panel button.
6. When video triggering, the horizontal time scale is 50us.
7. While the Autoscale is working, the settings below will be made forcibly:
    The DSO will switch from the wave zoom mode to the normal mode.
    In the decoding, pass/fail or XY mode, when entering into Autoscale, these modes will be turned off.
    In the STOP status, when entering into Autoscale, the status will be set to RUN.

How to Use Built-in Help

1. Push **Help** button, the catalog will display in the screen.

2. In the bottom menu, press **Prev Page** or **Next Page** to choose help topic, or just turn the **M** knob to choose.
3. Press **OK** to view the details about the topic, or just push the M knob.
4. Press **Quit** to exit the help, or just do other operations.

How to Use Executive Buttons

Executive Buttons include **Autoset, Run/Stop, Single, Copy**.

Autoset

It's a very useful and quick way to apply a set of pre-set functions to the incoming signal, and display the best possible viewing waveform of the signal.

The details of functions applied to the signal when using **Autoset** are shown as the following table:

Function Items	Setting
Channel Coupling	DC
Vertical Scale	Adjust to the proper division.
Vertical Position	Adjust to the proper position.
Bandwidth	Full
Horizontal Level	Middle
Horizontal Sale	Adjust to the proper division
Trigger Type	Slope or Video
Trigger Source	The previous source before autoseting. When the previous source has no input signal, the source will be set to the minimum channel which has input signal. When all the channels have no input signal, the source will be set to CH1.
Trigger Coupling	DC
Trigger Slope	Rising edge
Trigger Level	3/5 of the Vpk-pk
Trigger Mode	Auto
Display Format	YT
Force	Stop
Help	Exit
Pass/Fail	Off
Inverted	Off
Zoom Mode	Exit
Record Length	If greater than 10M, it will be set to 10M
Waveform Math or FFT	Off
Waveform Record	Off
Slow-scan	Off
Persist	Off

Note: When the autoscale is turned on and running, the Autoset button is invalid.

Judge waveform type by Autoset

Five kinds of types: Sine, Square, video signal, DC level, Unknown signal.

Menu as follow:

Sine: (Multi-period, Single-period, FFT, Cancel Autoset)

Square: (Multi-period, Single-period, Rising Edge, Falling Edge, Cancel Autoset)

Video signal:

DC level, Unknown signal:

Description for some icons:

Multi-period：	To display multiple periods
Single-period：	To display single period
FFT：	Switch to FFT mode
Rising Edge：	Display the rising edge of square waveform
Falling Edge：	Display the falling edge of square waveform
Cancel Autoset：	Go back to display the upper menu and waveform information

Note: The Autoset function requires that the frequency of signal should be no lower than 20Hz, and the amplitude should be no less than 5mv. Otherwise, the Autoset function may be invalid.

Run/Stop: Enable or disable sampling on input signals.

Notice: When there is no sampling at STOP state, the vertical division and the horizontal time base of the waveform still can be adjusted within a certain range, in other words, the signal can be expanded in the horizontal or vertical direction.

When the horizontal time base is ≤50ms, the horizontal time base can be expanded for 4 divisions downwards.

Single: Push this button you can set the trigger mode as single directly, so when trigger occurs, acquire one waveform then stop.

Copy: You can save the waveform by just pushing the **Copy** panel button in any user interface. The source wave and the storage location are according to the settings of the **Save** function menu when the Type is **Wave**. For more details, please see "*Save Function Menu*" on P59.

How to Print the Screen Image

To print an image of what appears on the oscilloscope screen, do as the follows:

(1) Connect the printer to the **USB Device port** on the rear panel of the oscilloscope. Note: The USB Device port supports PictBridge compatible printers.

(2) Push the **Utility** button, select **Function** in the bottom menu, select **Output** in the left menu.

(3) In the bottom menu, select **Device** as **PICT**. (When **PC** is selected, you can get an image by Oscilloscope software.)

(4) In the bottom menu, select **Print Setup**. In the right menu, set up print parameters. The **On** selection of **Ink Saver** will print out a copy with a white background.

(5) Once you have connected a printer to your oscilloscope and set up print parameters, you can print current screen images with a single push of the **Print** button on the front panel.

5. Use the Arbitrary Function Generator
(Optional to specific models)

The function generator provides 4 basic waveforms (sine, square, ramp, and pulse) and 46 built-in arbitrary waveforms (Noise, Exponential rise, Exponential fall, Sin(x)/x, Staircase, etc.). You can create a user-definable waveform and save it to internal storage or USB device.

Output Connection

Push the **Utility** button, select **Function** in the bottom menu, select **Output** in the left menu. In the bottom menu, select **Output**, in the right menu, select **AG Output**.

Single-channel:

Connect the BNC cable to the port marked **Out** in the back of the oscilloscope.

Dual-channel:

Connect the BNC cable to the port marked **Out 1**or **Out 2** in the back of the oscilloscope. **Out 1** is the output of CH1, **Out 2** is the output of CH2, also can be used as the port of trigger signal output & Pass/Fail output.
Figure 5-1 Generator Output Ports (Dual-channel)

To see the output of the generator, connect the other end of the BNC cable to one of the input channels on the front of the oscilloscope.

To Set Channels

Single-channel:

Push ⬚Out⬚ to turn on/off the channel output. The indicator will be lighted when the corresponding channel is tuned on.

Dual-channel:

● **To Switch Channels in Menu Settings**

Push [CH1/2] button to switch between **CH1** menu, **CH2** menu, and **Channel Copy** menu.

● **To Turn On/Off Output of Channels**

Push [Out 1] or [Out 2] to turn on/off output of the corresponding channel. The indicator will be lighted when the corresponding channel is tuned on.

● **Channel Copy menu**

Push [CH1/2] button to switch to **Channel Copy** menu.

CH2 To CH1	CH1 To CH2	Freq Lock Off	Ampl Lock Off	Align Phase	🏠
Copy Channel
Select **CH2 To CH1** in the bottom menu to copy parameters of CH2 to CH1.
Select **CH1 To CH2** in the bottom menu to copy parameters of CH1 to CH2.

Frequency Lock
Select **Freq Lock** in the bottom menu as **On**, the frequency of the two channels can be adjusted synchronously.

Amplitude Lock
Select **Ampl Lock** in the bottom menu as **On**, the amplitude of the two channels can be adjusted synchronously.

Align Phase
Select **Align Phase** in the bottom menu to align the initial phase of two channel signals.

To Set Signals

(1) Push [AFG] (single-channel) or [CH1/2] (dual-channel) button to show the bottom menu of generator.
(2) Select the desired waveform in the bottom menu, the corresponding menu is displayed on the right.
(3) The parameters can be set in the right menu.

To Output Sine Signals

The parameters of Sine waveform in the right menu are: Frequency/Period, Start Phase, Amplitude/High Level, Offset/Low Level.

To Set the Frequency

Select **Frequency** in the right menu (if **Frequency** is not displayed, select **Period** and push it again to switch to **Frequency**). Set the parameter in the right menu, see below.

Three methods to change the chosen parameter:

● Turn the **M** knob to change the value of cursor position. Press (←) / (→) direction
   key to move the cursor.

● **Use the input keyboard**: Push the **M** knob, an input keyboard will pop up. Turn the
   M knob to move between the keys. Push the **M** knob to input the chosen key.
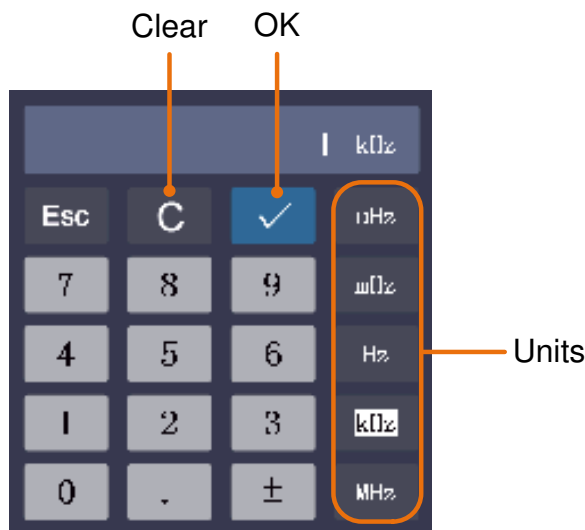

● **Use the touchscreen** (Touchscreen is optional):
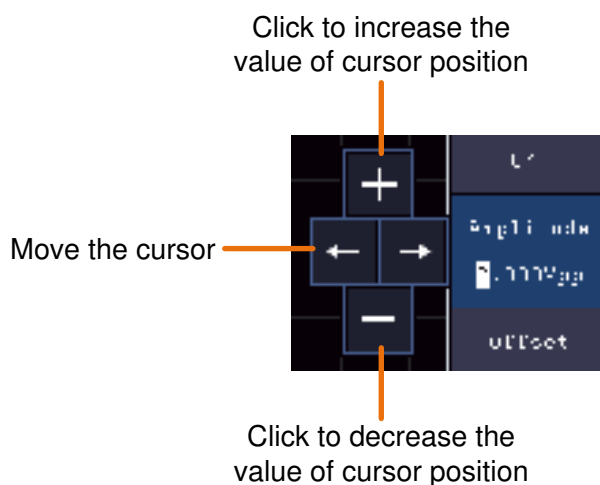

To Set the Period

Select **Period** in the right menu (if **Period** is not displayed, select **Frequency** and select it
again to switch to **Period**). Set the parameter in the right menu.

To Set the Start Phase

Select **StartPhase** in the right menu. Set the parameter in the right menu.

To Set the Amplitude

Select **Amplitude** in the right menu (if **Amplitude** is not displayed, select **High Level** and
select it again to switch to **Amplitude**). Set the parameter in the right menu.

To Set the Offset

Select **Offset** in the right menu (if **Offset** is not displayed, select **Low Level** and select it again to switch to **Offset**). Set the parameter in the right menu.

To Set the High Level

Select **High Level** in the right menu (if **High Level** is not displayed, select **Amplitude** and select it again to switch to **High Level**). Set the parameter in the right menu.

To Set the Low Level

Select **Low Level** in the right menu (if **Low Level** is not displayed, select **Offset** and select it again to switch to **Low Level**). Set the parameter in the right menu.

To Output Square Signals

The parameters of Square waveform are: Frequency/Period, Start Phase, Amplitude/High Level, Offset/Low Level.

To set the Frequency/Period, Start Phase, Amplitude/High Level, Offset/Low Level, please refer to *To Output Sine Signals* on page 93.

To Output Ramp Signals

The parameters of Ramp waveform are: Frequency/Period, Start Phase, Amplitude/High Level, Offset/Low Level, Symmetry.

To set the Frequency/Period, Start Phase, Amplitude/High Level, Offset/Low Level, please refer to *To Output Sine Signals* on page 93.

To Set the Symmetry of Ramp

Select **Symmetry** in the right menu of Ramp. Set the parameter in the right menu.

To Output Pulse Signals

The parameters of Pulse waveform are: Frequency/Period, Start Phase, Amplitude/High Level, Offset/Low Level, Width/Duty Cycle.

To set the Frequency/Period, Start Phase, Amplitude/High Level, Offset/Low Level, please refer to *To Output Sine Signals* on page 93.

To Set the Pulse Width of Pulse

Select **Width** in the right menu (if **Width** is not displayed, select **Duty Cycle** and select it again to switch to **Width**). Set the parameter in the right menu.

To Set the Duty Cycle of Pulse

Select **Duty Cycle** in the right menu (if **Duty Cycle** is not displayed, select **Width** and select it again to switch to **Duty Cycle**). Set the parameter in the right menu.

To Output Arbitrary Signals

The menu items of Arbitrary waveform are: Frequency/Period, Start Phase,

Amplitude/High Level, Offset/Low Level, New, File Browse, Built-in. You can operate the menu by using the menu selection buttons on the right.

To set the Frequency/Period, Start Phase, Amplitude/High Level, Offset/Low Level, please refer to *To Output Sine Signals* on page 93.

The Arbitrary signal consists of two types: the user-definable waveform and the system built-in waveform.

Create a New Waveform

(1) **Enter the operation menu:** Push ⬭AFG⬭ (single-channel) or ⬭CH1/2⬭ (dual-channel) button. Select **Arb** in the bottom menu, select **Others** in the right menu, and select **New**.

(2) **Set the number of waveform points:** Select **Points** in the right menu, turn the **M** knob to change the value, or use the input keyboard (push the M knob to show it) to input the value and choose the unit. **X1**, **X1000**, **Xle6**, **Xle9** in the keyboard respectively represent 1, 1000, 1000000, 1000000000. The waveform points range is 2 - 8192.

(3) **Set the interpolation:** Select **Intrpl** in the right menu, choose between **On**/**Off**. If you choose **On**, the points will be connected with beelines; otherwise, the voltages between two consecutive points will not change, and the waveform looks like a step-up one.

(4) **Edit the waveform points**: Select **Edit Points** in the right menu.
   - Select **Point**, input the number of the point to be edited.
   - Select **Voltage**, input the voltage for the current point.
   - Repeat the step above, set all the points to your needs.
   - Select **Save**, enter the file system.

If you want to save the waveform to internal memory, select **Memory** in the right menu as **Internal**. Turn the **M** knob to select a file from USER0 through USER31. Select **Save** in the right menu.

Last modification time

File size

Waveform graph
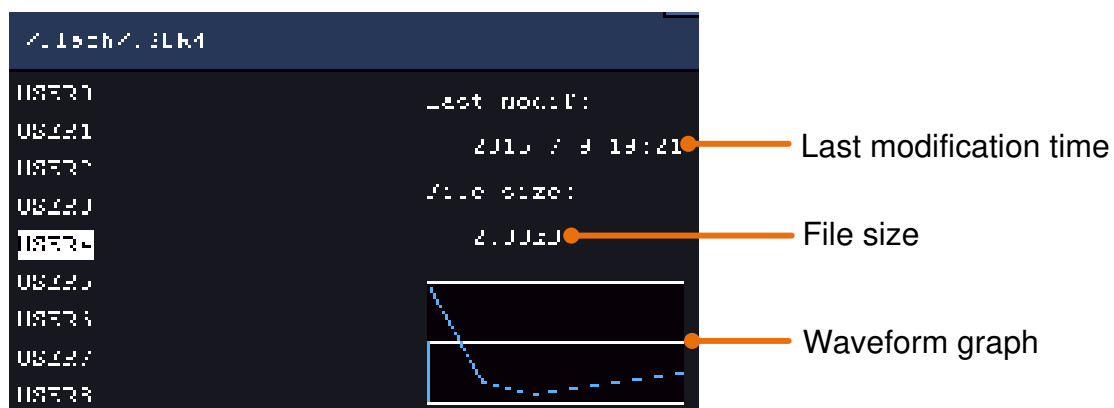

If a USB device is connected, and you want to save the waveform to it, select **Memory** in the right menu as **USB**. The instrument lists a directory of the folders and files on the USB memory device. Select a folder or file using the **M** knob to scroll up

and down the list. To enter the current folder, select **Change Dir** in the right menu, select it again to return to the upper directory.
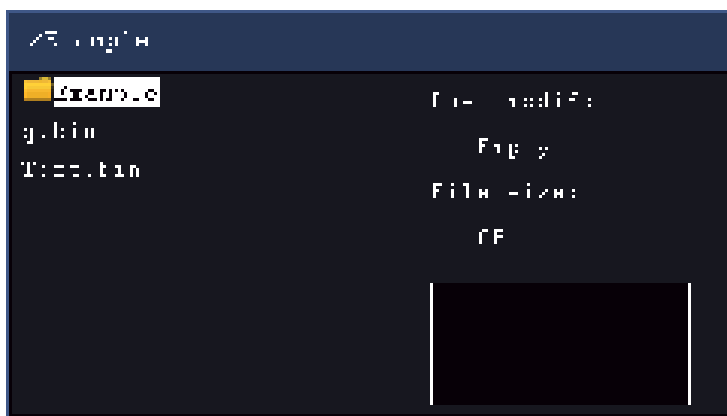

Enter the desired storage path, select **Save** in the right menu, an input keyboard pops up, input the file name, choose ⏎ in the keyboard to confirm. The waveform is saved as BIN file in the folder.

Note: The input length can have up to 35 characters.

File Browse

To read a waveform stored in internal storage or USB device:

(1) Push ⬜AFG (single-channel) or ⬜CH1/2 (dual-channel) button. Select **Arb** in the bottom menu, select **Others** in the right menu, and select **File Browse**.
(2) Select the desired waveform file in internal storage (FLASH) or USB device (USBDEVICE).
(3) Select **Read** in the right menu.

Built-in Waveform

There are 46 built-in Arbitrary waveforms.
Steps for selecting the built-in waveform:

(1) Push ⬜AFG (single-channel) or ⬜CH1/2 (dual-channel) button to show the bottom menu of generator.
(2) Select **Arb** in the bottom menu, select **Others** in the right menu, and select **Built-in**.
(3) Select **Common**, **Math**, **Window** or **Others** in the right menu. E.g. select **Others** to enter the following interface.
(4) Turn the **M** knob to select the desired waveform (or touch if the LCD is touchscreen). E.g. select **Noise**. Select **Select** to output the noise waveform.

Note: For single-channel, you can push [DC] on the front panel to output DC.

Built-in Waveform Table

Name	Explanation
Common	
StairD	Stair-down waveform
StairU	Stair-up waveform
StairUD	Stair-up and stair-down waveform
Trapezia	Trapezoid waveform
RoundHalf	RoundHalf wave
AbsSine	Absolute value of a Sine
AbsSineHalf	Absolute value of half a Sine
SineTra	Sine transverse cut
SineVer	Sine vertical cut
NegRamp	Negative ramp
AttALT	Gain oscillation curve
AmpALT	Attenuation oscillation curve
CPulse	Coded pulse
PPulse	Positive pulse
NPulse	Negative pulse
Maths	
ExpRise	Exponential rise function
ExpFall	Exponential fall function
Sinc	Sinc function
Tan	Tangent
Cot	Cotangent
Sqrt	Square root
XX	Square function
HaverSine	HaverSine function
Lorentz	Lorentz function

In	Natural logarithm function
Cubic	Cubic function
Cauchy	Cauchy distribution
Besselj	BessellI function
Bessely	BessellII function
Erf	Error function
Airy	Airy function
Windows	
Rectangle	Rectangle window
Gauss	Gauss distribution
Hamming	Hamming window
Hann	Hanning window
Bartlett	Bartlett window
Blackman	Blackman window
Laylight	Laylight window
Triang	Triangle window (Fejer window)
Others	
DC	DC signal
Heart	Heart signal
Round	Round signal
LFMPulse	Linear FM pulse
Rhombus	Rhombus signal
Cardiac	Cardiac signal
Noise	Noise signal

6. Use the Multimeter (Optional)

Input Terminals

The input terminals are on the back of the oscilloscope, which marked as **10A, mA, COM, V/Ω/C.**
Figure 6-1 Multimeter Input Terminals

DMM Menu

Push **DMM** button on the front panel to enter/exit the multimeter function. The button backlight will be lighted when the multimeter function is enabled.
Figure 6-2 Multimeter Button

The bottom menu of multimeter is as below:

Menu	Setting	Description
Current	ACA	Measuring AC current
	DCA	Measuring DC current
Voltage	ACV	Measuring AC voltage
	DCV	Measuring DC voltage
	R	Measuring resistance
	⊬	Testing diode
	⊏⊩	Testing for continuity
	C	Measuring capacitance
Hold	ON OFF	Freeze the display during measurement.

Configure	Relative	When making relative measurements, reading is the difference between a stored reference value and the input signal.
	Show Info ON OFF	Show/Hide the information window
	Auto Range	Select auto range mode
	Switch Range	Select manual range mode, press to switch range
	Current mA 10A (Only for current measurement)	Select the current range.

DMM Information Window

The Multimeter Information Window is displayed on the top right of the screen.
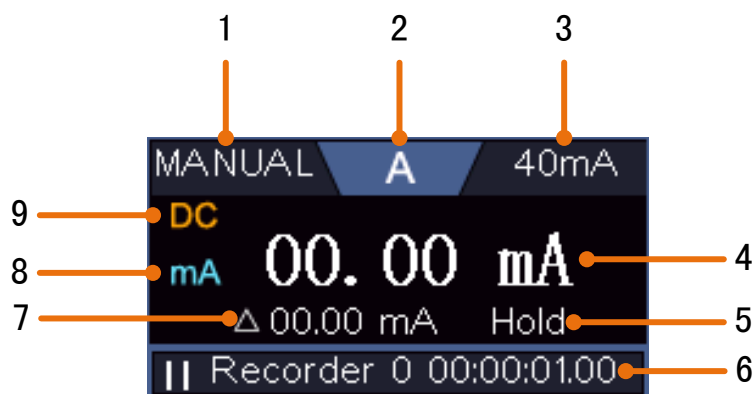

Figure 6-3 Multimeter Information Window

Description

1. Manual/Auto range indicators, **MANUAL** refers to the measuring range in manual operation mode and **AUTO** refers to the measuring range in automatic operation mode.

2. Measurement mode indicators:

   A ------ Current measurement

   V ------ Voltage measurement

   R ------ Resistance measurement

   ⊶ ------ Diode measurement

   ᴄ⊳ ------ Continuity test

   C ------ Capacitance measurement

3. Range.

4. Measurement display ("OL" is short for overload, indicates the reading exceeds the display range)

5. Data hold mode is enabled.

101

6. Multimeter recorder (See "*Multimeter Recorder*" on page 104).

7. The reference value of the relative measurement.

8. Range of measuring current: mA or 10A.

9. AC or DC when measuring current or voltage.

Making Multimeter Measurements

Measuring AC or DC Current

To measure a AC or DC current which is **less than 400 mA**, do the following:

(1) Push **DMM** button on the front panel. Select **Current** in the bottom menu, select it again to switch between **ACA** (AC current) or **DCA** (DC current).
(2) Select **Configure** in the bottom menu, select **Current** as **mA** in the right menu.
(3) Connect the black test lead to the **COM** terminal on the back of the oscilloscope. Connect the red test lead to the **mA** terminal.
(4) Turn off the power of the measured circuit. Discharge all high- voltage capacitors.
(5) Disconnect the circuit path to be tested. Connect the black test lead to one side of the circuit (with a lower voltage); connect the red test lead to the other side (with a higher voltage). Reversing the leads will produce a negative reading, but will not damage the multimeter.
(6) Turn on the power of the measured circuit, and read the display.
(7) Turn off the power of the measured circuit and discharge all high-voltage capacitors. Remove the test leads and restore the circuit to the original condition.

To measure a AC or DC current which is **400 mA to 10 A**, do the following:

(1) Push **DMM** button on the front panel. Select **Current** in the bottom menu, select it again to switch between **ACA** (AC current) or **DCA** (DC current).
(2) Select **Configure** in the bottom menu, select **Current** as **10A** in the right menu.
(3) Connect the black test lead to the **COM** terminal on the back of the oscilloscope. Connect the red test lead to the **10A** terminal.
(4) Turn off the power of the measured circuit. Discharge all high- voltage capacitors.
(5) Disconnect the circuit path to be tested. Connect the black test lead to one side of the circuit (with a lower voltage); connect the red test lead to the other side (with a higher voltage). Reversing the leads will produce a negative reading, but will not damage the multimeter.
(6) Turn on the power of the measured circuit, and read the display.
(7) Turn off the power of the measured circuit and discharge all high-voltage capacitors. Remove the test leads and restore the circuit to the original condition.

Measuring AC or DC Voltage

(1) Push **DMM** button on the front panel. Select **Current** in the bottom menu, select it again to switch between **ACA** (AC current) or **DCA** (DC current).
(2) Connect the black test lead to the **COM** terminal on the back of the oscilloscope and the red test lead to the **V/Ω/C** terminal.

(3) Probe the test points and read the display.
Measuring Resistance

(1) Push **DMM** button on the front panel. Select in the bottom menu, select **R**.

(2) Connect the black test lead to the **COM** terminal on the back of the oscilloscope and the red test lead to the **V/Ω/C** terminal.

(3) Probe the test points and read the display.

Testing Diodes

(1) Push **DMM** button on the front panel. Select in the bottom menu, select it until switching to .

(2) Connect the black test lead to the **COM** terminal on the back of the oscilloscope and the red test lead to the **V/Ω/C** terminal.

(3) Connect the red test lead to the positive terminal (anode) of the diode and the black test lead to the negative terminal (cathode). The cathode of a diode is indicated with a band. Read the diode forward bias.

Testing for Continuity

(1) Push **DMM** button on the front panel. Select in the bottom menu, select it until switching to .

(2) Connect the black test lead to the **COM** terminal on the back of the oscilloscope and the red test lead to the **V/Ω/C** terminal.

(3) Probe the test points to measure the resistance in the circuit. If the reading is below 50 Ω, the multimeter will beep.

Measuring Capacitance

(1) Push **DMM** button on the front panel. Select in the bottom menu, select it until switching to **C**.

(2) Insert the supplied capacitance measurer to the **COM** terminal and the **V/Ω/C** terminal on the back of the oscilloscope.

(3) Insert the capacitance to the capacitance measurer, then screen shows the capacitance reading.

Note: when measuring the capacitance which is less than 5 nF, please use relative value measuring mode to improve measuring precision.

Multimeter Features

Data Hold Mode

You can freeze the display for any function.

(1) Select **Hold** in the bottom menu as **ON**. **HOLD** will be shown on the display.
(2) Select **OFF** to exit this mode.

Making Relative Measurements

When making relative measurements, reading is the difference between a stored reference value and the input signal.
(1) Select **Configure** in the bottom menu, select **Relative** in the right menu to enter the relative mode.
 The measurement value at this time is stored as the reference value, and displayed behind $\triangle$.
 In this mode, current reading = input value - reference value.

(2) Press it again to exit the mode.

Note: This function is not available when measuring resistance, diodes, and testing for continuity.

Information Display

Show/hide the information window on the top right of the display.
(1) Select **Configure** in the bottom menu, select **Show Info** in the right menu as **ON**. The information window will be shown on the display.
(2) Select **OFF** to hide.

Auto or Manual Range

Auto range is set as default. To switch auto or manual range, do the following steps:
(1) Select **Configure** in the bottom menu.
(2) Select **Auto Range** in the right menu, **AUTO** will be shown on the display.
(3) Select **Switch Range** in the right menu, **MANUAL** will be shown on the display. Press this softkey to switch range.

Note: When testing diode, testing continuity, and measuring capacitance, manual range is disabled.

Multimeter Recorder

You can use the multimeter data recorder to record the measurements when measuring current/voltage by multimeter (optional).

Push the **Utility** button, select **Function** in the bottom menu, select **DAQ** in the left menu.

The description of **DAQ Menu** is shown as the follows:

Function Menu	Setting	Description
Set	Interval	Set the record interval (0.5s - 10s, step by 0.5s)
	Duration	"d h m s" represents day, hour, minute, second. E.g. "1 02:50:30" represents a day and 2 hours, 50 minutes and 30 seconds. Press **Duration** to switch between the time unit, turn the **M** knob to set the value. Max duration: 3 days for internal storage, 10 days for external storage.
	Enable	Turn on or off the recorder.
STRT STOP		Start or stop recording.
Storage	Internal External	Save to internal storage or USB memory device.
Export		When internal storage is selected, you can export the internal record file to a USB memory device.

To record the current/voltage measurements in the multimeter, do the following:

1. Push **DMM** button on the front panel to enter the multimeter function. Select **Current** or **Voltage** in the bottom menu.
   If you want to enter the relative mode, select **Configure** in the bottom menu, select **Relative** in the right menu.
2. Push the **Utility** button, select **Function** in the bottom menu, select **DAQ** in the left menu.
3. Select **Storage** in the bottom menu, select **Internal** or **External** in the right menu. If you select External, insert the USB memory device into the front-panel USB port on your instrument.
4. Select **Set** in the bottom menu, select **Enable** in the right menu as **ON**.
5. Select **Interval** in the right menu, turn the **M** knob to set it.
6. Select **Duration** in the right menu, push it to switch between the time unit, turn the **M** knob to set the corresponding value.
7. Select **STRT** in the bottom menu.
8. **When external storage is selected**: The instructions will be shown on the screen. The record file will be named as "Multimeter_Recorder.csv". If a file with the same name already exists in the USB memory device, it will be overwritten. (If you want to keep the existing file, back up it to other location in advance.) Select **STRT** in the bottom menu to start recording.
9. When the record time gets to the defined duration, the recording will be ended. If you want to end recording prematurely, select **STOP** in the bottom menu.
Record time, use the defined interval as its refresh interval

Day H M S

10. **When internal storage is selected**: You can export the internal record file to a USB

memory device. Insert the USB memory device into the front-panel USB port on your instrument. Select **Export** in the bottom menu. The instructions will be shown on the screen. The export file will be named as "Multimeter_Recorder.csv". If a file with the same name already exists in the USB memory device, it will be overwritten. (If you want to keep the existing file, back up it to other location in advance.) Select **Export** in the bottom menu to export.

How to chart the data

You can open the CSV file using Microsoft Excel, or your favorite spreadsheet application, and create charts based on the data.

In the following steps, Microsoft Excel 2010 is used as an example.

1. Open Multimeter_Recorder.csv in Excel.

2. Select the data that you want to chart (see *Figure 6-4*).

3. On the **Insert** tab, in the **Charts** group, click **Line**, and then click **Line** in 2-D Line (see *Figure 6-5*).

4. The chart will be displayed (see *Figure 6-6*). If you want to keep the chart, save the file to XLS format.

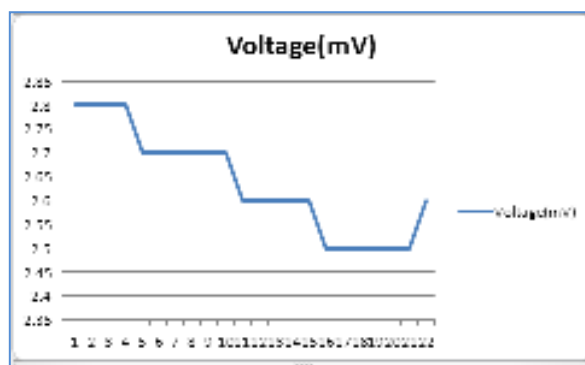

Figure 6-4

Figure 6-6

7. Communication with PC

The oscilloscope supports communications with a PC through USB, LAN port or Wi-Fi. You can use the Oscilloscope communication software to store, analyze, display the data and remote control.

To learn about how to operate the software, you can push F1 in the software to open the help document.

Here is how to connect with PC. First, install the Oscilloscope communication software on the supplied CD. Then there are several ways of connection to choose from.

Using USB Port

(1) **Connection:** Use a USB data cable to connect the **USB Device port** in the right panel of the Oscilloscope to the USB port of a PC.

(2) **Install the driver:** Run the Oscilloscope communication software on PC, push F1 to open the help document. Follow the steps of title "**I. Device connection**" in the document to install the driver.

(3) **Port setting of the software:** Run the Oscilloscope software; click "Communications" on the menu bar, choose "Ports-Settings", in the setting dialog, choose "Connect using" as "USB". After connect successfully, the connection information in the bottom right corner of the software will turn green.
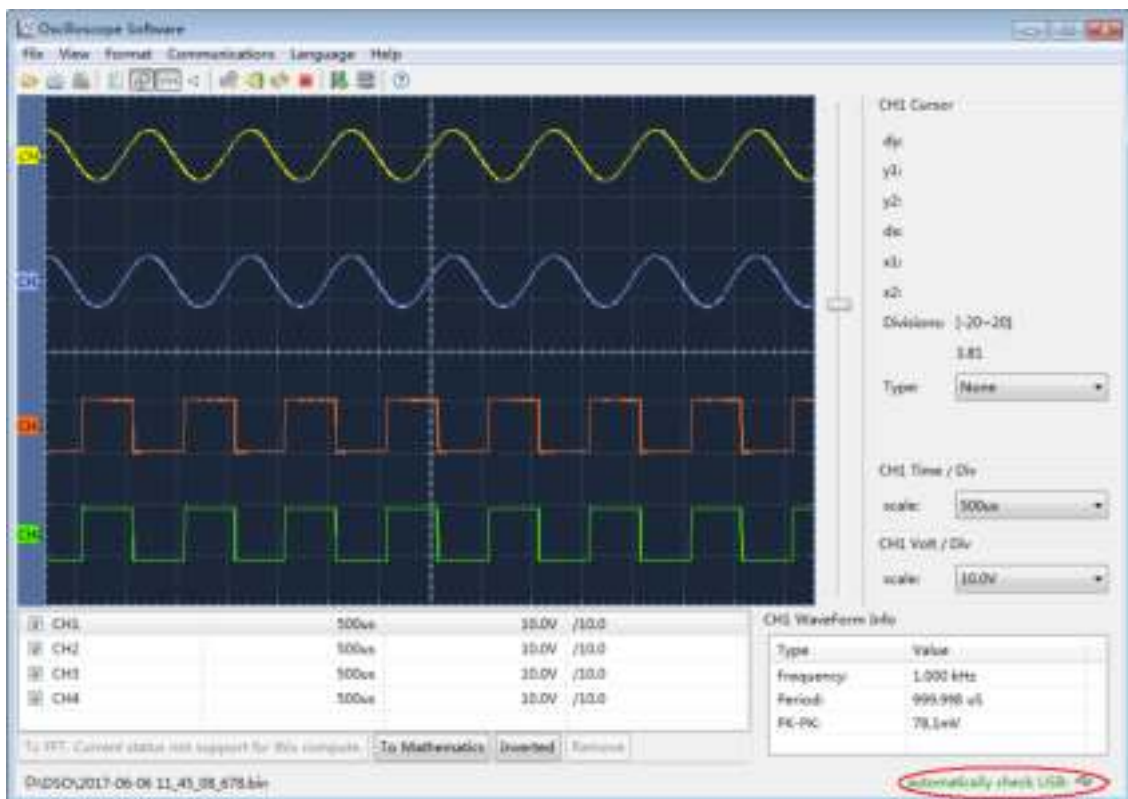

Figure 7-1 Connect with PC through USB port

Using LAN Port

Connect directly

(1) **Connection**. Plug in the LAN cable to the LAN port in the back of the oscilloscope; plug the other end into the LAN interface of the computer.

(2) **Set the network parameters of the computer**. Since the oscilloscope can not support obtaining an IP address automatically, you should assign a static IP address. Here we set the IP address to 192.168.1.71.

Figure 7-2 Set the network parameters of the computer

(3) **Set the network parameters of the Oscilloscope Software.** Run the software on the computer; choose the "Ports-settings" of the "Communications" menu item. Set "Connect using" to LAN. About the IP, the first three bytes is same as the IP in the step (2), the last byte should be different. Here, we set it to 192.168.1.72. The range of the port value is 0 - 4000, but the port which under 2000 is always used, so it is suggested to set it to the value above 2000. Here, we set it to 3000.

Figure 7-3 Set the network parameters of the PeakTech Oscilloscope Software

(4) **Set the network parameters of the oscilloscope**. In the oscilloscope, push the **Utility** button. Select **Function** in the bottom menu. Select **LAN Set** in the left menu. In the bottom menu, set the **Type** item as **LAN**, and select **Set**. In the right menu, set **IP** and **Port** to the same value as the "Ports-settings" in the software in step (3). Select **Save set** in the bottom menu, it prompts "Reset to update the config". After resetting the oscilloscope, if you can get data normally in the oscilloscope software, the connection is successful.

Figure 7-4 Set the network parameters of the oscilloscope

Connect through a router

(1) **Connection**. Use a LAN cable to connect the oscilloscope with a router, the LAN port of the oscilloscope is in the right side panel; the computer should be connected to the router too.

(2) **Set the network parameters of the computer**. Since the oscilloscope can not support obtaining an IP address automatically, you should assign a static IP address. The Default gateway and Subnet mask should be set according to the router. Here we

set the IP address to 192.168.1.71, Subnet mask is 255.255.255.0, Default gateway is 192.168.1.1.
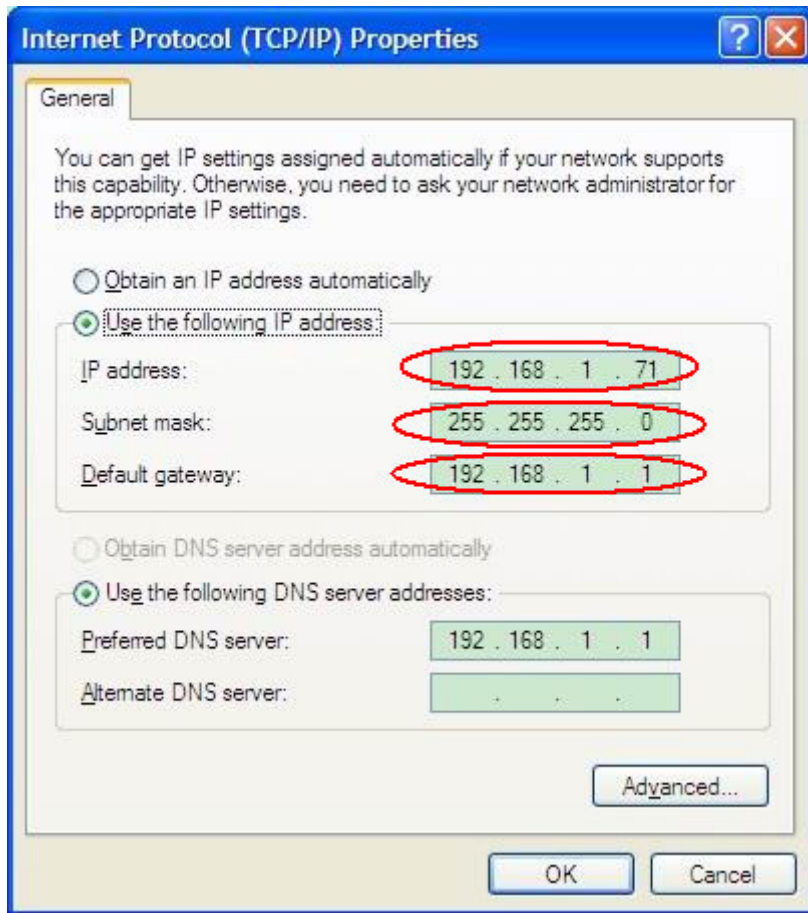

Figure 7-5 Set the network parameters of the computer

(3) **Set the network parameters of the PeakTech Oscilloscope Software.** Run the software on the computer; choose the "Ports-settings" of the "Communications" menu item. Set "Connect using" to LAN. About the IP, the first three bytes is same as the IP in the step (2), the last byte should be different. Here, we set it to 192.168.1.72. The range of the port value is 0 - 4000, but the port which under 2000 is always used, so it is suggested to set it to the value above 2000. Here, we set it to 3000.

Figure 7-6 Set the network parameters of the PeakTech Oscilloscope

Software 110

(4) **Set the network parameters of the oscilloscope**. In the oscilloscope, push the **Utility** button. Select **Function** in the bottom menu. Select **LAN Set** in the left menu. In the bottom menu, set the **Type** item as **LAN**, and select **Set**. In the right menu, set **IP** and **Port** to the same value as the "Ports-settings" in the software in step (3). The Netgate and Net mask should be set according to the router. Select **Save set** in the bottom menu, it prompts "Reset to update the config". After resetting the oscilloscope, if you can get data normally in the oscilloscope software, the connection is successful.

Figure 7-7 Set the network parameters of the oscilloscope

Using Wi-Fi to Connect with PC (Optional)

Connect with PC as Wi-Fi Access Point

PC should support Wi-Fi.

(1) **Set the oscilloscope.** In the oscilloscope, push the **Utility** button. Select **Function** in the bottom menu. Select **LAN Set** in the left menu. In the bottom menu, set the **Type** item as **WIFI-AP**, and select **Set** in the bottom menu.

(2) In the right menu, select **SSID**, a keyboard will pop up. You can turn and push the **M** knob, or touch the keyboard (if the LCD is touchscreen) to set the access point name.

(3) In the right menu, select **Encryption**, push again to set the type. **Open** type needs no password. **WEP** or **WPA** type need to set the password. You can select **WPA**. In the right menu, select **Password**, use the keyboard to set the Wi-Fi password (8 to 32 characters).

(4) In the right menu, select **IP:PORT**, **IP** is fixed by the oscilloscope, and can not be edited. Here IP is 192.168.1.1. Turn the **M** knob to set the **PORT**. Here, we set it to 3000.

(5) After setting, select **ON** in the **Status** menu. The 🌀 icon appears on the top right of the screen.
(6) Select **Save set** in the bottom menu to save current settings.

(7) **Set Wi-Fi connection on PC.** Enter the Wi-Fi settings on PC, select the oscilloscope access point to connect, enter the set password.
(8) **Set the network parameters of the PeakTech Oscilloscope Software.** Run the software on the computer; choose the "Ports-settings" of the "Communications" menu item. Set "Connect using" to LAN. Set **IP** and **Port** to the same value in the oscilloscope in the step (4). If you can get data normally, the connection is successful.

Figure 7-8 Set the network parameters of the PeakTech Oscilloscope Software

Connect with PC as Wi-Fi Station

The oscilloscope and PC should be on the same network (LAN).

(1) In the oscilloscope, push the **Utility** button. Select **Function** in the bottom menu.

Select **LAN Set** in the left menu. In the bottom menu, set the **Type** item as **WIFI-STA**, and select **Set** in the bottom menu.

(2) In the right menu, select **SSID**, a keyboard will pop up. Input the name of the Wi-Fi hotspot. You can turn and push the **M** knob, or touch the keyboard (if the LCD is touchscreen).

(3) In the right menu, select **Encryption**, push to set the Encryption type of the Wi-Fi hotspot. **Open** type needs no password. **WEP** or **WPA** type need to input the password. In the right menu, select **Password**, use the keyboard to input the Wi-Fi hotspot password.

(4) In the right menu, select **IP:PORT**, Turn the **M** knob to set the **PORT**. Here, we set it to 3000.

(5) After setting, select **ON** in the **Status** menu. The value of **IP** is displayed in **IP:PORT** menu. Here IP is 10.1.1.126. A changing icon 📶 appears on the top right of the screen.

(6) Select **Save set** in the bottom menu to save current settings.

(7) **Set the network parameters of the computer**. Set IP in the computer, the first three bytes is same as the IP in the oscilloscope, the last byte should be different. Here, we set it to 10.1.1.123. The Default gateway and Subnet mask should be set according to the router.
Figure 7-9 Set the network parameters of the computer

(8) **Set the network parameters of the PeakTech Oscilloscope Software.** Run the software on the computer; choose the "Ports-settings" of the "Communications" menu item. Set "Connect using" to LAN. Set **IP** and **Port** to the same value in the oscilloscope. If you can get data normally, the connection is successful.

Figure 7-10 Set the network parameters of the PeakTech Oscilloscope Software

9. Demonstration

Example 1: Measurement a Simple Signal

The purpose of this example is to display an unknown signal in the circuit, and measure the frequency and peak-to-peak voltage of the signal.

1.   Carry out the following operation steps for the rapid display of this signal:

(1) Set the probe menu attenuation coefficient as **10X** and that of the switch in the probe switch as **10X** (see "*How to Set the Probe Attenuation Coefficient*" on P12).

(2) Connect the probe of **Channel 1** to the measured point of the circuit.

(3) Push the **Autoset** button.

The oscilloscope will implement the **Autoset** to make the waveform optimized, based on which, you can further regulate the vertical and horizontal divisions till the waveform meets your requirement.

2.   Perform Automatic Measurement

The oscilloscope can measure most of the displayed signals automatically. To measure the period, the frequency of the CH1, following the steps below:

(1) Push the **Measure** front panel button to show the Measure menu.
(2) Select **Add** in the bottom menu.
(3) In the left Type menu, turn the **M** knob to select **Period**.
(4) In the right menu, select **CH1** in the **Source** menu item.
(5) In the right menu, select **Add**. The period type is added.
(6) In the left Type menu, turn the **M** knob to select **Frequency**.
(7) In the right menu, select **CH1** in the **Source** menu item.
(8) In the right menu, select **Add**. The frequency type is added.

The measured value will be displayed at the bottom left of the screen automatically (see *Figure 9-1*).

Figure 9-1 Measure period and frequency value for a given signal

Example 2: Gain of a Amplifier in a Metering Circuit

The purpose of this example is to work out the Gain of an Amplifier in a Metering Circuit. First we use Oscilloscope to measure the amplitude of input signal and output signal from the circuit, then to work out the Gain by using given formulas.

Set the probe menu attenuation coefficient as **10X** and that of the switch in the probe as **10X** (see "*How to Set the Probe Attenuation Coefficient*" on P12).

Connect the oscilloscope CH1 channel with the circuit signal input end and the CH2 channel to the output end.

 Operation Steps:
(1) Push the **Autoset** button and the oscilloscope will automatically adjust the waveforms of the two channels into the proper display state.

(2) Push the **Measure** button to show the Measure menu.

(3) Select **Add** in the bottom menu.

(4) In the left Type menu, turn the **M** knob to select **PK-PK**.

(5) In the right menu, select **CH1** in the **Source** menu item.

(6) In the right menu, select **Add**. The peak-to-peak type of CH1 is added.

(7) In the left Type menu, turn the **M** knob to select **PK-PK**.

(8) In the right menu, select **CH2** in the **Source** menu item.

(9) In the right menu, select **Add**. The peak-to-peak type of CH2 is added.

(10)Read the peak-to-peak voltages of Channel 1 and Channel 2 from the bottom left of the screen (see *Figure 9-2*).

(11)Calculate the amplifier gain with the following formulas.

124

Gain = Output Signal / Input signal

Gain (db) = 20×log (gain)
Figure 9-2 Waveform of Gain Measurement

Example 3: Capturing a Single Signal

It's quite easy to use Digital Oscilloscope to capture non-periodic signal, such as a pulse and burr etc. But the common problem is how to set up a trigger if you have no knowledge of the signal? For example, if the pulse is the logic signal of a TTL level, the trigger level should be set to 2 volts and the trigger edge be set as the rising edge trigger. With various functions supported by our Oscilloscope, user can solve this problem by taking an easy approach. First to run your test using auto trigger to find out the closest trigger level and trigger type, this helps user to make few small adjustments to achieve a proper trigger level and mode. Here is how we achieve this.

The operation steps are as follows:

(1) Set the probe menu attenuation coefficient to 10X and that of the switch in the probe to 10X (see "*How to Set the Probe Attenuation Coefficient*" on P12).

(2) Push **CH1** button to select CH1, adjust the **Vertical Scale** and **Horizontal Scale** knobs to set up a proper vertical and horizontal ranges for the signal to be observed.

(3) Push the **Acquire** button to display the Acquire menu.

(4) Select **Acqu Mode** in the bottom menu. Select **Peak Detect** in the right menu.

(5) Push the **Trigger Menu** button to display the Trigger menu.

(6) Select the first menu item in the bottom menu. Select **Single** in the right menu.

(7) In the left menu, select **Edge** as the mode.

(8) Select **Source** in the bottom menu. Select **CH1** in the right menu.

(9) Select **Coupling** in the bottom menu. Select **DC** in the right menu.

(10) In the bottom menu, select **Slope** as [icon] (rising**)**.

(11) Turn the **Trigger Level** knob and adjust the trigger level to the roughly 50% of the signal to be measured.

(12) Check the Trigger State Indicator on the top of the screen, if it is not Ready, push down the **Run/Stop** button and start acquiring**,** wait for trigger to happen. If a signal reaches to the set trigger level, one sampling will be made and then displayed in the screen. By using this approach, a random pulse can be captured easily. For instance, if we want to find a burst burr of high amplitude, set the trigger level to a slightly higher value of the average signal level, push the **Run/Stop** button and wait a trigger. Once there is a burr occurring, the instrument will trigger automatically and record the waveform during the period around the trigger time. By turning the **Horizontal Position** knob in the horizontal control area in the panel, you can change the horizontal triggering position to obtain the negative delay, making an easy observation of the waveform before the burr occurs (see *Figure 9-3*).
Figure 9-3 Capturing a Single Signal

Example 4: Analyze the Details of a Signal

Noise is very common inside most of the electronic signal. To find out what's inside the noise and reduce the level of noise is very important function our oscilloscope is capable to offer.

Noise Analysis

The level of noise sometime indicates a failure of electronic circuit. The Peak Detect

functions acts an important role to help you to find out the details of these noise. Here is how we do it:

(1) Push the **Acquire** button to display the Acquire menu.

(2) Select **Acqu Mode** in the bottom menu.

(3) Select **Peak Detect** in the right menu.

The signal displayed on the screen containing some noise, by turning on Peak Detect function and changing time base to slow down the incoming signal, any peaks or burr would be detected by the function (see *Figure 9-4*).
Figure 9-4 Signal with Noises

Separate Noises from the Signal

When focusing on signal itself, the important thing is to reduce the noise level as lower as possible, this would enable user to have more details about the signal. The Average function offered by our Oscilloscope can help you to achieve this.

Here are the steps for how to enable Average function.

(1) Push the **Acquire** button to display the Acquire menu.

(2) Select **Acqu Mode** in the bottom menu.

(3) Select **Average** in the right menu, turn the **M** knob and observe the waveform obtained from averaging the waveforms of different average number.

User would see a much reduced random noise level and make it easy to see more details of the signal itself. After applying Average, user can easily identify the burrs on the rising and falling edges of some part of the signal (see *Figure 9-5*).
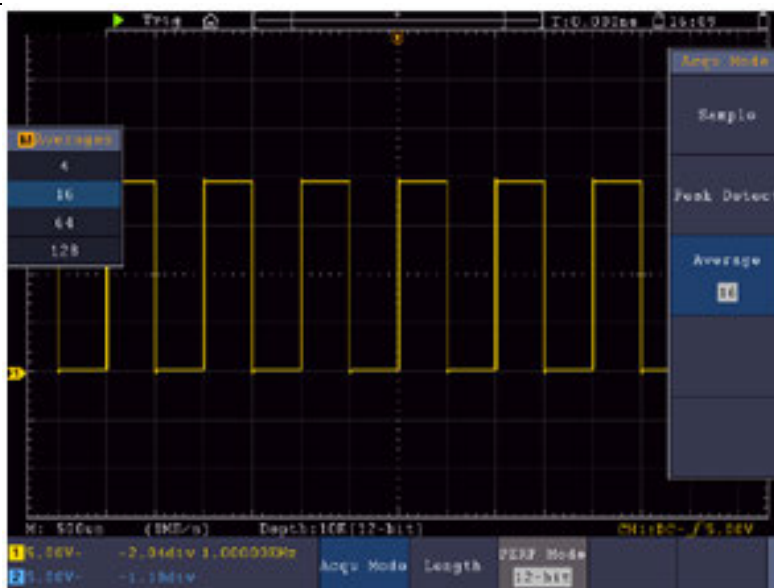

Figure 9-5 Reduce Noise level by using Average function

Example 5: Application of X-Y Function

Examine the Phase Difference between Signals of two Channels

Example: Test the phase change of the signal after it passes through a circuit network.

X-Y mode is a very useful when examining the Phase shift of two related signals. This example takes you step by step to check out the phase change of the signal after it passes a specified circuit. Input signal to the circuit and output signal from circuit are used as source signals.

For the examination of the input and output of the circuit in the form of X-Y coordinate graph, please operate according to the following steps:

(1) Set the probe menu attenuation coefficient for **10X** and that of the switch in the probe for **10X** (see "*How to Set the Probe Attenuation Coefficient*" on P12).

(2) Connect the probe of channel 1 to the input of the network and that of Channel 2 to the output of the network.

(3) Push the CH1 to CH4 button to turn on CH1 and CH2, turn off CH3 and CH4.

(4) Push the **Autoset** button, with the oscilloscope turning on the signals of the two channels and displaying them in the screen.

(5) Push **CH1** button to select CH1, turn the **Vertical Scale** knob, and then push **CH2** button to select CH2, turn the **Vertical Scale** knob, making the amplitudes of two signals equal in the rough.

(6) Push the **Display** button and recall the Display menu.

(7) Select **XY Mode** in the bottom menu. Select **Enable** as **ON** in the right menu. The oscilloscope will display the input and terminal characteristics of the network

128

in the Lissajous graph form.

(8) Turn the **Vertical Scale** and **Vertical Position** knobs, optimizing the waveform.

(9) With the elliptical oscillogram method adopted, observe and calculate the phase difference (see *Figure 9-6*).
Figure 9-6 Lissajous Graph

Based on the expression **sin (q) =A/B or C/D**, thereinto, **q** is the phase difference angle, and the definitions of A, B, C, and D are shown as the graph above. As a result, the phase difference angle can be obtained, namely, **q =± arcsin (A/B)** or **± arcsin (C/D)**. If the principal axis of the ellipse is in the I and III quadrants, the determined phase difference angel should be in the I and IV quadrants, that is, in the range of (0 - π /2) or (3π / 2 - 2π). If the principal axis of the ellipse is in the II and IV quadrants, the determined phase difference angle is in the II and III quadrants, that is, within the range of (π / 2 - π) or (π - 3π /2).

Example 6: Video Signal Trigger

Observe the video circuit of a television, apply the video trigger and obtain the stable video output signal display.

Video Field Trigger

For the trigger in the video field, carry out operations according to the following steps:

(1) Push the **Trigger Menu** button to display the trigger menu.

(2) Select the first menu item in the bottom menu. Select **Single** in the right menu.

(3) In the left menu, select **Video** as the mode.

(4) Select **Source** in the bottom menu. Select **CH1** in the right menu.

(5) Select **Modu** in the bottom menu. Select **NTSC** in the right menu.

(6) Select **Sync** in the bottom menu. Select **Field** in the right menu.

(7) Turn the **Vertical Scale**, **Vertical Position** and **Horizontal Scale** knobs to obtain a proper waveform display (see *Figure 9-7*).

Figure 9-7 Waveform Captured from Video Field Trigger

10. Troubleshooting

1. **Oscilloscope is powered on but no Display.**

   - Check whether the power connection is connected properly.
   - Check whether the fuse which is beside the AC power input jack is blew (the cover can be pried open with a straight screwdriver).
   - Restart the instrument after completing the checks above.
   - If the problem persists, please contact PeakTech and we will be under your service.

2. **After acquiring the signal, the waveform of the signal is not displayed in the screen.**

   - Check whether the probe is properly connected to the signal connecting wire.
   - Check whether the signal connecting wire is correctly connected to the BNC (namely, the channel connector).
   - Check whether the probe is properly connected with the object to be measured.
   - Check whether there is any signal generated from the object to be measured (the trouble can be shot by the connection of the channel from which there is a signal generated with the channel in fault).
   - Make the signal acquisition operation again.

3. **The measured voltage amplitude value is 10 times or 1/10 of the actual value.** Look at the attenuation coefficient for the input channel and the attenuation ration of the probe, to make sure they are match (see "*How to Set the Probe Attenuation Coefficient*" on P12).

4. **There is a waveform displayed, but it is not stable.**

   - Check whether the **Source** item in the **TRIG MODE** menu is in conformity with the signal channel used in the practical application.
   - Check on the trigger **Type** item: The common signal chooses the **Edge** trigger mode for **Type** and the video signal the **Video**. Only if a proper trigger mode is applied, the waveform can be displayed steadily.
   - Try to change the trigger coupling into the high frequency suppress and the low frequency suppress to smooth the high frequency or low frequency noise triggered by the interference. (Only for the models that have this function.)

5. **No Display Responses to the Push-down of Run/Stop.**
   Check whether Normal or Single is chosen for Polarity in the TRIG MODE menu and the trigger level exceeds the waveform range.
   If it is, make the trigger level is centered in the screen or set the trigger mode as Auto. In addition, with the **Autoset** button pressed, the setting above can be completed automatically.

6. **The displaying of waveform seems getting slow after increasing AVERAGE value in Acqu Mode** (see "*How to Implement Sampling Setup*" on P55)**, or a longer duration is set in the Persist in Display** (see "*Persist*" on P57)**.**
   It's normal as the Oscilloscope is working hard on many more data points.

11. Technical Specifications

Unless otherwise specified, the technical specifications applied are for XDS3000 four-channel series only, and Probes attenuation set as 10X. Only if the oscilloscope fulfills the following two conditions at first, these specification standards can be reached. Das Gerät sollte bei 30 Minuten lang ununterbrochen laufen.

- This instrument should run for at least 30 minutes continuously under the specified operating temperature.
- If change of the operating temperature is up to or exceeds 5℃, do a "Self-calibration" procedure (see "How to Implement Self-calibration" on P14).

All specification standards can be fulfilled, except one(s) marked with the word "Typical".

Trigger:

Leistungsmerkmale		Bemerkungen
Trigger Level Range	Internalal	±5 div from screen center
	EXT	±2 V
	EXT/5	±10 V
Trigger Level Accuracy (typical)	Internal	±0.3div
	EXT	± (10mV + 6% des Set Value)
	EXT/5	± (50mV + 6% des Set Value)
Trigger displacement	According to Record length and time base	
Trigger Holdoff Range	100ns~10s	
50% level setting (typical)	Input signal frequency ≥50Hz	
Edge Trigger	Slope	Rising, Falling
Pulse Trigger	Trigger condition	Positive pulse : >, <, = Negative pulse : >, <, =
	Puls Width-Range	30ns～10s
Video Trigger	Modulation	Support standard NTSC, PAL and SECAM systems
	Line Number Range	1-525 (NTSC) und 1-625 (PAL/SECAM)
Slope Trigger	Trigger Condition	Positive pulse : >, <, = Negative pulse : >, <, =
	Time Setting	30ns～10s
Runt Trigger	Polarity	Positive, Negative
	Trigger Condition	>, =, <
	Pule Width-Range	30ns～10s
Windows Trigger	Polarity	Positive, Negative
	Trigger position	Enter, Exit, Time
	Windows Time	30ns～10s
Timeout Trigger	Polarity	Positive, Negative
	Idle Time	30ns～10s
Nth Edge Trigger	Edge type	Rising, Falling
	Idle Time	30ns～10s
	Edge number	1 bis 128
Logic Trigger	Logic Mode	AND, OR, XNOR, XOR
	Input Mode	H,L, X, Rising, Falling
	Output Mode	Goes True, Goes False, Is True >, Is True <, Is True =
SPI Trigger	Trigger conditions	Timeout
	Timeout Value	30 ns to 10 s
	Data Bits	4 bit to 32 bit
	Data Line Setting	H, L, X
I2C Trigger	Trigger conditions	Start, Restart, Stop, ACK Lost, Address, Data, Addr/Data
	Address Bits	7 bit, 8 bit, 10 bit
	Address Range	0 to 127, 0 to 255, 0 to 1023
	Byte Length	1 to 5
RS-232 Trigger	Polarity	Normal, Inverted
	Trigger Condition	Start, Error, Check Error, Data
	Baud Rate	Common, Custom
	Data Bits	5 bit, 6 bit, 7 bit, 8 bit
CAN Trigger	Signal Type	CAN_H, CAN_L, TX, RX
	Trigger Condition	Start of Frame, Type of Frame, Identifier, Data, ID & Data, End of Frame, Missing Ack, Bit Stuffing Error
	Baud Rate	Common, Custom
	Sample Point	5% to 95%
	Frame Type	Data, Remote, Error, Overload

Waveform Generator

Specifications	Remarks	
Integr. Wavefrom Generator	P 1340	No
	P 1341	No
	P 1355	No
	P 1356	1 Channel / 25 MHz
	P 1360	1 Channel / 25 MHz
	P 1362	1 Channel / 25 MHz
	P 1363	1 Channel / 25 MHz
	P 1370	No
	P 1375	2 Channel / 25 MHz
Sampling	125 MS/s	
Vertical Resolution	14 bits	
Amplitude Range	10mVpp – 6Vpp oder 2mVpp-6Vpp (nur P 1375)	
Waveform Length	8 kPts.	
Standard-Waveforms	Sine, Square, Ramp, Pulse	
Arbitrary-Waveforms	46 Built-in	

Digital-Multimeter

Specifications	Remarks
Display	3 ¾ Digits (Max. 4000 Counts)
Diode	0V – 1.5V
Input impedance	10 MΩ
Continuity Tester	<50Ω (+/-30Ω) acoustic signal
Capacity	51.2nF – 100μF: ±(3%±3 dgt.)
Voltage	**DCV:** 400mV, 4V, 400V: ±(1%±1dgt.), Max. Eingang: DC 1000V **ACV:** 4V,40V,400V:±(1%±3dgt.), Max. Eingang: AC 750V (virtual value) Frequenz: 40Hz-400Hz
Current	**DCA:** 40mA,400mA: ±(1.5%±1 dgt.), 10A: ±(3%±3dgt.) **ACA:** 40mA: ±(1.5%±3 dgt.) 400mA: ±(2%±1 dgt.) 10A: ±(3%±3dgt.)
Resistance	400Ω: ±(1%±3 dgt.), 4KΩ~40MΩ: ±(1%±1 dgt.), 40MΩ: ±(1,5%±3 dgt.)

General Specifications

Display		
Display Type	P 1340	8" color LCD
	P 1341	8" color LCD
	P 1355	8" Touchscreen color LCD
	P 1356	8" Touchscreen color LCD
	P 1360	8" Touchscreen color LCD
	P 1362	8" Touchscreen color LCD
	P 1363	8" Touchscreen color LCD
	P 1370	8" Touchscreen color LCD
	P 1375	8" Touchscreen color LCD
Resolution	800 (Horizontal) × 600 (Vertical) Pixel	
Colors	65536 colors, TFT Display	

<div style="text-align:center;"><u>11.Technical Specifications</u></div>

Probe Compensator Output	
Output Voltage (Typical)	About 3.3 V or 5V, with the Peak-to-Peak voltage ≥1 MΩ.
Frequency (Typical)	Square wave of 1 KHz
Power	
Mains Voltage	100～240 VAC RMS, 50/60Hz, CAT II
Consumption	< 24W
Fuse	T 2A, 250V
Battery	3.7V, 13200mAh (Optional Accessory: Model „Akku 6")
Umgebungsbedingungen	
Temperature / relative humidity	Operating Temperature: 0°C ~ 40°C @ <90% r.h. Storage Temperature: -20°C ~ 60°C @ <90% r.h.
Height	3000 m operating / 15000m non-operating
Cooling Method	Integrated fan cooling
Others	
Dimensions	340mm× 180mm ×90mm (L*H*W)
Weight	Ca. 2.6kg

12. Appendix

Appendix A: Enclosure

(The accessories subject to final delivery.)

Standard Accessories (depending on model:

Power Cord	**CD Rom**	Probe Adjust	**USB Cable**	**Probe**

Multimeter Lead	**Capacitance Ext Module**	**Soft Bag**

Optional Accessories:

Battery

Appendix B: General Care and Cleaning

General Care

Do not store or leave the instrument where the liquid crystal display will be exposed to direct sunlight for long periods of time.

Caution: To avoid any damage to the instrument or probe, do not exposed it to any sprays, liquids, or solvents.

Cleaning

Inspect the instrument and probes as often as operating conditions require.
To clean the instrument exterior, perform the following steps:

1. Wipe the dust from the instrument and probe surface with a soft cloth. Do not make any scuffing on the transparent LCD protection screen when clean the LCD screen.

2. Disconnect power before cleaning your Oscilloscope. Clean the instrument with a wet soft cloth not dripping water. It is recommended to scrub with soft detergent or fresh water. To avoid damage to the instrument or probe, do not use any corrosive chemical cleaning agent.

⚠ **Warning:** Before power on again for operation, it is required to confirm that the instrument has already been dried completely, avoiding any electrical short circuit or bodily injury resulting form the moisture.

Appendix C: Battery Using Guide
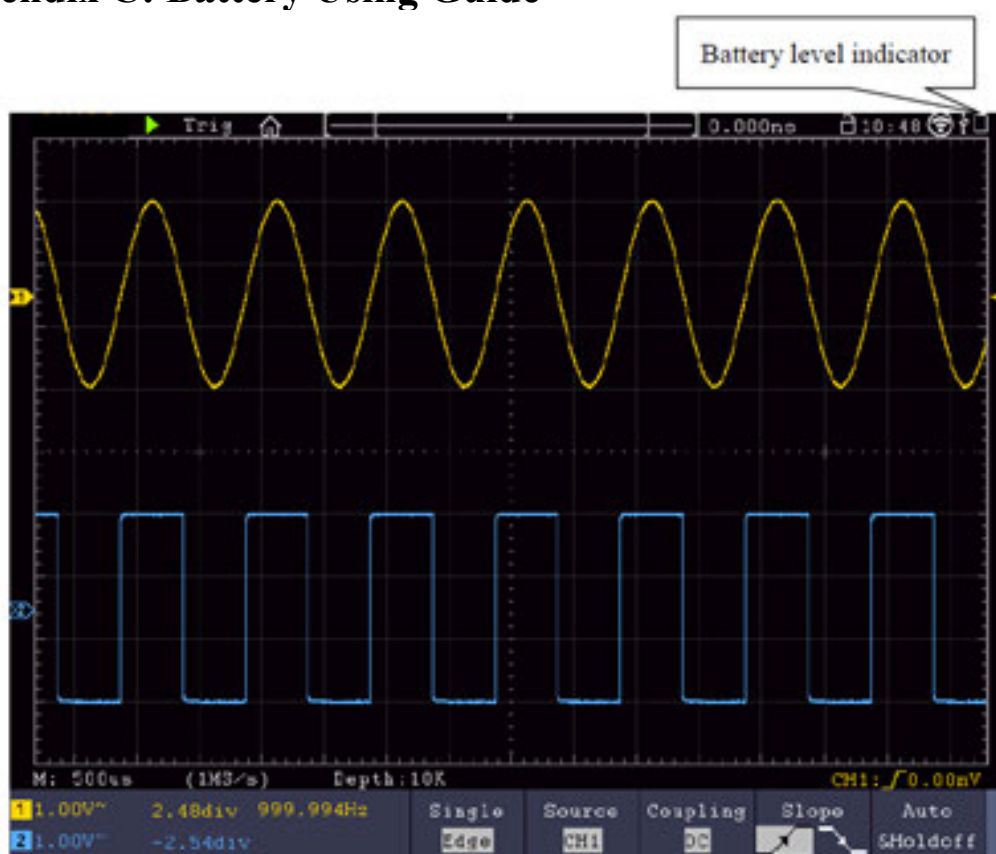

Figure 12-1 Battery level indicator

Charging the oscilloscope

There will have battery power indication show on the top of panel when oscilloscope power supplied by the battery (if no indication has appeared, see "*Display*" on P75).
⎵ indicates the battery is nearly used up.

Note:

To avoid overheat of battery during charging, the ambient temperature is not allowed to exceed the permissible value given in technical specification.

Replacing the Lithium Battery Unit

It is usually not required to replace the battery unit. But when it is required to replace it, only qualified personnel can carry out this operation, and only use the same specification lithium battery.
