FAQ

Please avoid prolonged exposure of this device to extreme temperatures as it may cause permanent damage.

Why can't I wear the watch to take a hot shower?

When the water temperature changes rapidly, water vapor or condensation is created. The water vapor is in the gas phase and the size of the molecular so minute so it can easily enter the watch. The internal circuit of the watch can then short-circuit, which may damage the circuit board of the watch and affect the functioning of the watch.

Why wont the watch turn on? Why won't it charge?

If when you receive the watch and it does not power up immediately, it may be that a collision during the transport of the watch has affected the battery. Plug in the charging cable for activation.

If the battery level is too low, or if the watch has not been used for a long time and will not turn on, please plug in the charging cable and charge it for more than half hour to activate it.

Disclaimer

The method of capturing the heart rate through an optical sensor used by this LOTUS watch does not reach the level of precision and accuracy of a professional medical device, nor can it guarantee the equivalent stable readings. The watch cannot replace a medical device in its function of detecting or diagnosing pathologies, heart or other diseases.

Consequently and with respect to this function, the device is for recreational use only. Multiple factors (including level of skin contact, pigmentation, tattoos, sudden arm movements etc) can alter the accuracy of the data provided by the sensor. Please keep in mind that the actual heart rate may be higher or lower than the reading indicated by the optical sensor at a given time.

If you suspect any anomaly, always consult your doctor and in case of emergency, immediately contact the emergency services in your area.

Festina Lotus SA assumes no responsibility for any claim that may arise from the use and / or interpretation that the user of the device and / or third parties may make of the heart rate information provided by their devices.

By virtue of the regulations pursuant to the handling of waste products deriving from electronic and electrical equipment, end of lifecycle watch making products must be selectively collected for processing. You may therefore dispose of your quartz watch making products at any of our retail outlets or any other authorized collection point. The selective collection, processing, rating and recycling of these products helps contribute to safeguarding the environment and protecting our health.
