

PowerCube | Extendeds |

“ Always within ”
reach

Docking system

PowerCube | Extendeds | come with a unique docking system that allows you to mount the PowerCube on any flat surface so it will always be within reach.

Removable tape

The unique docking system uses strong adhesive tape that leaves no traces on the surface when removed. You can always replace the tape with new ones to mount the PowerCube on a different surface.

No blockage

Our uniquely designed PowerCube prevents bulky adaptors and plugs from blocking each other. This means that all additional sockets on the PowerCube can be used at the same time!

Duo-charging

You can charge two USB-charging devices, such as smartphones and tablets, at the same time. The dual high-power USB ports (2.1A) allow a faster charging time than charging via your laptop.

A single button

Our products are meant to make your life more efficient and less complicated and should take no more than a glance to figure out how to use. The PowerCube | Original Switch | lives up to this standard with its single On/Off button to power your devices on and off.

Cable management

You can organize your power cords by aligning the cable with the provided cable fix.
