Push back cuticles and remove dead cuticles.

Apply a layer of basecoat

Apply a nail form.

Apply the extension gel.

Remove the nail form.

File and buff the nails.

Apply topcoat.

Tips and tricks

- Do a proper nailprep, that contains filling, buffering and cleaning the nails.
- Do not cure under a nail lamp lower than 48W, otherwise it will not cure properly.
- Extension gel can be sticky and thick in cold environments. Put the package in warm water or a warm towel for a few minutes to soften the gel.
- After curing in the lamp there will be a sticky layer. Clean with alcohol or apply a layer of topcoat.
