1. Safety Aspects

1.1. Internal Assessments

All Pcmán® products undergo a safety assessment regarding mechanical/physical safety, electrical safety, hygiene, and flammability hazards. Similarly, all materials are subject to an internal safety assessment. Only when an element is made of approved material and has been internally approved in the safety assessment will it be used in Pcmán® products.

The review process also includes an assessment of each new Pcmán® model. A product safety report concludes with mechanical testing of elements from the initial production. Regular spot checks are carried out during production with both measurements and tests. In addition, chemical tests are performed on raw materials.

1.2 Electric and Electronic Products

Electric and electronic products are evaluated and tested according to requirements in relevant standards and legislation. All mains power supplies are tested according to relevant standards and legislation.

2. Manufacturing

The manufacturing sites use an internally approved set-up including the necessary production and testing equipment. The same requirements are applied irrespective of whether the production is immediate inventory control and corrective and preventive actions.

3. Production Sites

Pcmán® products covered by this document are manufactured by:

Pcmán
Bettinkhorst 15
7207BP Zutphen
www.pcmán.nl
The Netherlands

4. Testing

As noted above, internal Pcmán® approval and documentation focuses on the individual element/component. Pcmán® tests all products for compliance with the relevant requirements. This procedure also applies to the different types of storage containers used as packaging for Pcmán® products.

5. Further Information

Please contact us at info@pcman.nl if you have any questions or require more information.

Kind regards,
Pcmán
