

# ATLAS SANITARY SILICONE SILTON S

- for sealing various types of joints and connections
- flexible
- weather-resistant

# Innovative technologies

**ATLAS SANITARY SILICONE SILTON S** is a single-component polymerbased sealant with an acetate curing system. Thanks to its properties, it is widely used in in residential and industrial construction. The specially designed formulation provides:

- resistance to harmful atmospheric conditions
- high flexibility
- resistant to a wide range of temperatures

Recommended for sealing the edges of the interface between the cladding and room fittings - around shower enclosures, shower trays, joints around bathroom furniture and fittings, wash basins, toilets, baths, kitchen worktops and around sinks.

# Properties

It is permanently elastic - it retains its high elasticity during the entire service life, hardens without shrinkage; enables sealing of coverings on stable wood-based panels and plasterboards and plasterboard, on underfloor and under-plaster heating.

It provides the joints with an aesthetically pleasing appearance and long-lasting colour - it is resistant to UV radiation, ageing processes and cleaning agents.

Creates a perfectly smooth surface.

It has high temperature resistance - from -50 °C to +180 °C.

It is part of a tile finishing system - together with grouts and silicones, it forms a colour-coherent set of products for tile finishing.

# Colours

**39 colours** - in line with the colours of ATLAS grouts and silicones.

# The product complies with the requirements of PN-EN 15651-

#### Siliconisation

#### Substrate preparation

The substrate should be dry, clean and thoroughly cleaned of dust, dirt and other impurities that could weaken the adhesion. Surfaces in the immediate vicinity of areas to be filled with silicone should be protected with painter's tape.

#### Sealing

Before using the silicone, remove the cap and cut off the end of the cartridge tube. Then put the cap back on and cut it, preferably at an angle, to a width corresponding to the size of the joint. Fit the cartouche thus prepared into the silicone extrusion gun. Extrude the material evenly, introducing it into the joints with a slight excess, in a continuous manner - leaving no gaps or voids. The surface of the silicone should be shaped and finally smoothed in about 5 minutes with a special spatula or other tool, wetted in water with a small amount of soap or dishwashing liquid. It is recommended that the joints are shaped in such a way as to allow water to drain freely. Immediately after smoothing the joints, remove the painter's tape protecting the surface of the elements to be sealed.

#### Use of the cladding

Light foot traffic is possible already after approx. 3 hours after grouting. The grouted surface can be fully loaded after approx. 24 hours.

## Consumption

Consumption dependent on joint width and depth. An example of the consumption for the most common applications is presented in the table below, showing the number of running metres of joint obtained from one cartridge.

Weld width [mm]	Joint depth [mm]	Consumption [mb / 280 ml].
4,0	6,0	approx. 11,0
6,0	6,0	approx. 7,5
8,0	6,0	approx. 5,5

#### Packaging

Plastic cartridges: 280 ml.

#### Safety information

Approved by the National Institute of Hygiene.

Safety information is given on the product packaging and in the Safety Data Sheet, available at www.atlas.com.pl.

#### Storage and transport

Information on storage and transport is given on the product packaging and in the Safety Data Sheet, available at www.atlas.com.pl.

The shelf life of the product (best before use) is 24 months from the production date on the packaging.

#### Important additional information

Sanitary silicone should not be used to bond aquariums, mirrors or to seal joints with Teflon, polyethylene (PE), polypropylene (PP), concrete, marble and lead, zinc, copper and iron.

Excessively absorbent tiles may become discoloured. Therefore test the silicone on a small section before application. If discolouration occurs the tile should be impregnated with ATLAS IMPREGNATING SEALER FOR NATURAL STONE AND GRES before application.

The colour shown on the front of the packaging is to be regarded as illustrative only. Due to the different technologies used in printing and construction, any differences in shades between the colour of a specific product and its simulation shown on the packaging cannot constitute grounds for any claims against the developer or ATLAS. The shade of a particular colour depends on the homogeneity of its texture, the conditions of use, the parameters of the substrate and the ambient and lighting conditions. The actual colour shade may vary to some extent from the colour shown on the label. Only use product with the same production date and batch number on one surface. To avoid possible colour differences colour differences, it is recommended to use only silicone with the same production date and batch number on the same surface.

Silicones and grouts are produced on the basis of different types of binders and therefore vary in smoothness and degree of gloss. These factors naturally affect the colour shade for each type of product.

In order to avoid silicone sticking to the bottom of the joint and to ensure the most favourable filling between the joint sides only, it is recommended to use an expansion joint cord of polyurethane foam.

Any soiling from the silicone should be removed on an ongoing basis with petroleum spirit. After curing, their removal is only possible mechanically.

The information contained in this Technical Data Sheet is a basic guideline for the use of the product and does not relieve the user of the obligation to carry out the work in accordance with the rules of the art of construction and safety regulations. With the issue of this Technical Data Sheet, all previous ones are no longer valid. The documents accompanying the product are available at www.atlas.com.pl.

The contents of the Technical Data Sheet and the designations and trade names used therein are the property of Atlas Ltd. Their unauthorised use will be sanctioned.
