### CLOSER ADJUSTMENT

#### CLOSING CYCLE

- NOTE: Closing and CLOSING and PLATO are controlled by two (2) separate speed adjuster valves which adjust the CLOSING speed first, then adjust the PLATO speed.
- TO CLOSING speed adjustment is accomplished by the rotation of the speed adjusting valve.
- Turn the speed adjusting valve COUNTER-CLOCKWISE for a FASTER closing speed.
  - Turn the speed adjusting valve CLOCKWISE for a SLOWER closing speed.
- PLATO speed adjustment is accomplished by the rotation of the speed adjusting valve.
- Turn the speed adjusting valve COUNTER-CLOCKWISE for a SLOWER closing speed.
  - Turn the speed adjusting valve CLOCKWISE for a FASTER closing speed.
- CAUTION: Do not turn speed adjusting valve more than 180 DEGREES counter-clockwise from its factory set position, as too speed adjusting valve could become dislodged from the door closer body resulting in the loss of internal fluid and failure of the device.
