# DRIFINAL <br>  <br> <br> Solution Guide 

 <br> <br> Solution Guide}

## HDW TDUSE THIS GUIDE

- Before learning to solve the Rubik's Master, you should be proficient at solving the Rubik's Cube (original $3 \times 3$ ). Throughout this guide please reference the Rubik's Cube ( $3 \times 3$ ) guide.

Like the Rubik's Cube, the Rubik's Master is made up of edge, corner, and center pieces.

- Both puzzles have 8 corner pieces, however the Rubik's Master has 24 center pieces instead of 6 , and 24 edge pieces instead of 12 .

■ Unlike the Rubik's Cube, there is not a fixed center piece to indicate the color of each face when the Rubik's Master is solved.

- The color layout is found through observations of the corner pieces, or by knowing that the Rubik's Master follows a certain color layout:

WHOTE opposite YELLOW RED opposite ORANGE BLUE opposite GREEN

## VERY IMPDRTANT:

 difficult but if you persevere, you CAN solve the Rubik's Master.- Keep the Rubik's Master on a table to maintain the same front face for an entire algorithm (sequence of moves).
- Think of the algorithms as moving a piece out of the way, setting up its correct position, and then moving the piece into place.
$\square$ Solve one step at a time by re-scrambling your Rubik's Master and practicing multiple times before moving on to the next step.
- Use this guide along with the videos on Rubiks.com showing each solving stage.
- Each move is a $1 / 4$ turn.

- An ALGORITHM is a sequence of moves that you need to do in a specific order.
- When following the algorithms in this guide, it is important to maintain the FRONT face of your Rubik's Master so it remains the FRONT through all of the turns.

## HOLDINE YOUR RU:IK'S MASTER

Hold the Rubik's Master so the WHITE logo tile is on the UP face.

## IMPDRTANT INFDRMATIDN

- There are 24 center pieces on the Rubik's Master that need to be grouped in sets of 4 . Then there will be 6 centers like on a Rubik's Cube.

Start by solving the WHITE center.

Action 1 Locate another WHITE center tile that is not on the UP face.

## Action 2

If your other WHITE tile is NOT on the DOWN face:

- Hold your Rubik's Master so that the other WHITE tile is on the FRONT face.
- Turn the FRONT face (F) until the tile is in the lower right of the 4 center tiles.

## Action 3

Turn the UP face (U) until there is a non-WHITE tile in the upper left corner of the 4 center tiles.

If your other WHITE tile IS on the DOWN face:

- Turn the DOWN face (D) until the other WHITE tile is in the lower right of the 4 center tiles.

## Action 4

Action 5 Repeat Actions 1-4 until all 4 center tiles are WHITE.

## Action 6

Continue solving the center pieces for all 6 faces. Follow the actions on pages 4 \& 5, replacing WHITE in each step with the next color.
Solve the colors in this order:

When solving the other centers, you must remember the orientation of the colors.

WHEN YOUR CENTERS ARE sDLVED THE colors should MATCH THIS QRIENTATION:

WHOTE opposite YELLOW RED opposite ORANGE GREEN opposite BLUE

PAIR THE EDCES

There are 24 edge pieces on the Rubik's Master that need to be paired so you have 12 edges like a Rubik's Cube. The edges do not need to match the centers yet.

## Action 1

Find the two orange and white edge pieces. Use outside turns to get the edge pieces on the left and right of the FRONT face. The color of the center doesn't matter.

Hold your Rubik's Master to match one of these you may need to turn your Rubik's Master over.

## Action 2

If the edges are not directly across from each other, follow this sequence to line them up.

## Action 3

Once the edges are across from each other, follow this sequence to pair them.

Action 4
Repeat Actions 1-3 until all 24 edge pieces are paired.

## STEP THREE:

## GחLVE THERU:HK'G MAETER

## LIKE THE RU:IW'S CI:E

- After grouping the centers and pairing the edges, the Rubik's Master can now be solved like the Rubik's Cube.

- There may be two times when solving the Rubik's Master like a Rubik's Cube that additional steps are needed that are not covered in the Rubik's Cube Solution Guide. These two cases are referred to as parities. The parity fixes can be found on pages 11 (Make the yellow cross) and 13 (Position the final yellow edges) of this guide.

## Action 1

Solve the White Cross

## Action 2

Solve the White Corners

## SOLVING THE WHITE CORNERS

If you can't solve the White Corners, you may have the Centers in the wrong color order. You'll need to go back and resolve the Centers and Edges.

## Action 3

Solve the Middle Layer keeping the paired edges together as one piece. This picture shows the Rubik's Master with the White face down.

WHEN SOLVING THE RUBIK'S MASTER LIKE A RUBIK'S CUBE, ONLY TURN THE DUTSIDE FACES.

## STEP THREE:

## GחLVE THE RU:HK'G MASTER

## LIKE THE RU:|K'S CD:

## Action 4 <br> Make the Yellow Cross

- If you have 1 or 3 Yellow edge pairs on the UP face, follow the algorithm for fixing the parity on page 11.

## Fixing the Parity

If you have 1 or 3 Yellow edge pairs on the UP face, hold your Rubik's Master to match one of these images and then follow this algorithm:

Once you have fixed the parity go to Action 5 on page 10.

Notice that the LEFT and RIGHT are slice turns. FRONT, BACK, and UP are face turns.

## Position the Yellow Corners

## STEP THREE:

## GחLVE THE RU:HK'G MAETER

LIKE THE RU:IK'S CII:

## Action 7 <br> Position the final Yellow Edges

This is where the second parity may occur and you need to use algorithms that are not in the Rubik's Cube Solution Guide.

```
If there are NO YELLOW EDGE pairs positioned correctly:
```

Follow the algorithm in the Rubik's Cube Solution Guide.

You will end up with 1 or 2 edge pairs positioned correctly.

- If one Yellow edge pair is now placed correctly, follow the algorithm in the Rubik's Cube Solution Guide for positioning Yellow Edges.
- If two Yellow edge pairs are now placed correctly, follow the directions on the next page.

Determine how many of the Yellow edge pairs are in the correct position, and follow the directions that match your Rubik's Master.
 Rubik's Cube Solution Guide for positioning Yellow Edges.

If the TWO
CORRECTLY
PLACED EDGE
PAIRS are adjacent (next
to each other):

Hold the Rubik's Master so the correctly placed edge pairs are on the LEFT and BACK faces.

- Follow the algorithm below to fix the parity.
- Finally, follow the algorithm in the Rubik's Cube Solution Guide for positioning Yellow edges.

Are you?

Are you you?

Notice all the RIGHT turns are slice turns.
The words are there to help you remember the algorithm.
