

Ensure your solar panel is South facing or as near as possible

Clean your solar panel from time to time

Do **NOT** place your solar panel in shaded areas.

Do **NOT** charge behind glass

PLEASE CHARGE YOUR LIGHT FOR 3 - 5 DAYS BEFORE FIRST USE

SOLAR UP/DOWN SOLAR WALL LIGHT

USER GUIDE

1

Carefully consider the installation location for the lamp. Try to avoid shadows by day and other sources of light at night that could trick the light into thinking it's still daylight. Please remember amount of light the solar panel receives by day directly affects the runtime of the lamp at night. A poorly positioned lamp will produce short runtimes at night.

2

Drill two level holes 34mm apart and use the fixings provided or others, depending on the surface.

3

Select the required brightness by covering the solar panel and pushing the on/off switch.

First push - full brightness

Second push - powersaving mode (ideal for winter months or poorly located lamps)

Third push - off

4

Fix the screws in place and slide the light down onto the screws.

5

The lamp will turn on automatically after dusk

Troubleshooting

If you are encountering problems with your light, its more than likely something you can resolve yourself. A solar panel in a poor location will struggle to work well. Please try the troubleshooting tips below before contacting your retailer.

1. Double check the installation location. Is it as south facing as possible and in an unshaded location?

2. Are there other sources of light tricking the lamp into thinking it's still daylight and stopping the unit from activating? Test this by covering the solar panel with a tea towel or similar - ensuring there is no light reaching the panel. If the lamp activates then another source of light hitting the solar panel is tricking the lamp into thinking it's still daylight. Remove the source of light or install in a different location.

Maintenance

Clean the surface of the solar panel and light lens with a soft, slightly moistened cloth. Do not use corrosive cleansing agents or chemical solutions since this may damage the surfaces and impair operation. Keep the solar panel free of dirt, debris and snow or the battery might not charge properly. This may also shorten battery life or cause malfunction.

Safety Instructions

The Solar Centre assume no liability for any damage resulting from the use of this product, nor do we assume liability for any damage to property or personal injury caused by improper use or failure to observe the safety instructions. Unauthorised conversion and/or modification of the unit will result in the invalidation of any guarantee.
