MANUAL INSTALLATION

9. Have fun with your new kitchen faucet! Do you have questions?

8. Open the tap again and check the hand shower connections work properly.

7. If everything is connected correctly, you can use the hand shower comfortably.

6. Unscrew the hand shower and see if it contains dirt.

5. Attach the nuts of the flexible hoses to the water pipes with a wrench.

4. Attach the red hose to the left and the blue one to the right. We recommend attaching Teflon tape to the water pipes. Attach the red hose to the left and the blue one to the right. Flexible hoses have the standard G3/8" connection. If it does not fit, you will probably need size G1/2" nipples.

3. Attach the tap to prevent leakage. Tighten firmly until the screw driver to tighten the tap nuts onto the flexible hoses, second the metal ring and finally connect the tap to the desired position on the worktop.

You can tighten it manually. Facet. You attach the blue one at the front and the red one at the back.

4. Screw the small part of the flexible hoses into the faucet. Attach the tap to the tap holes to the flexible hoses and finally connect the tap to the desired position on the worktop.

3. Attach the tap and check for leaks. Check the position of the tap and whether it is firmly attached.

2. First slide the silicone ring over the hoses, second the metal ring and finally screw the lock nut onto the flexible hoses, firmly.

1. Place the tap in the desired position on the worktop.
