

LED LIGHTING
Votlage:165-260V 50-60Hz
IP=20. Ra:80

Warm tip

- Please do not turn the surface layer and perforating indicator, otherwise the light source may be damaged!!!
- At the same time, check whether all the terminal connections are in good contact. Good because there are connection lines in the process of logging and transportation. Falling off, otherwise the lamp body will not be affected!
