- 12 – Analog stereo line output “Surround” (3.5mm jack plug)
- 13 – Analog stereo line output “Rear” (3.5mm jack plug)
- 14 – Analog stereo line output “Center/Sub” (3.5mm jack plug)

## **2. Installation**

### **2.1 Connecting Aureon 7.1 USB to the computer**

To connect the Aureon 7.1 USB to your computer, you need a free USB Type A port.

It makes no difference whether the port is a USB 1.1 or USB 2.0 port; the device functions equally well when attached to either.

The Aureon 7.1 USB is hot-pluggable, which means that you can connect or disconnect the unit at any time while the computer is running.

### **2.2 Drivers?**

When connected to your system for the first time, the Aureon 7.1 USB installs a driver that is integrated into Windows; this process is completely automatic.

Insert the Aureon 7.1 USB software CD and install the Control Panel using the Autorun feature. Double-click AUTORUN.EXE in the root folder of the Aureon 7.1 USB CD and select first the "Software Installation" menu item and then "Aureon 7.1 USB".

Please follow the installation instructions.

## 3. Control-Panel

### 3.1 Main Setting

#### Output device

This defines the number of channels that go directly to the sound card. For best sound experience choose the speaker-configuration of your audio-playback. Click the configuration symbol to get more information.

#### DSP-Modus

To access the DSP mode, you have to activate the two switches labelled. With this mode you can adjust the sound depending on the circumstances. You can also switch virtual boxes, without having the actual speaker to adjust physically.

#### Audio System Status

Here you can see the status of the selected configuration.

## Analog Output

You can raise or lower the volume of each separate speaker by clicking the corresponding volume dial and moving the mouse forwards or back. This allows you to match the surround sound perfectly to your room and speaker system.

## Self test

With the play and stop button you can start the self test of the speakers.

## 3.2 Mixer

### Volume

You can adjust the volume of each individual input here. The faders controls the different inputs and give you the ability to mute one using the MUTE button or adjust the volume of the speakers using the faders.

### Record

In the Record window you can set the signal source that you want to record and its volume.

S/PDIF is a digital signal that does not allow volume control.

### 3.3 Effect

#### Environment

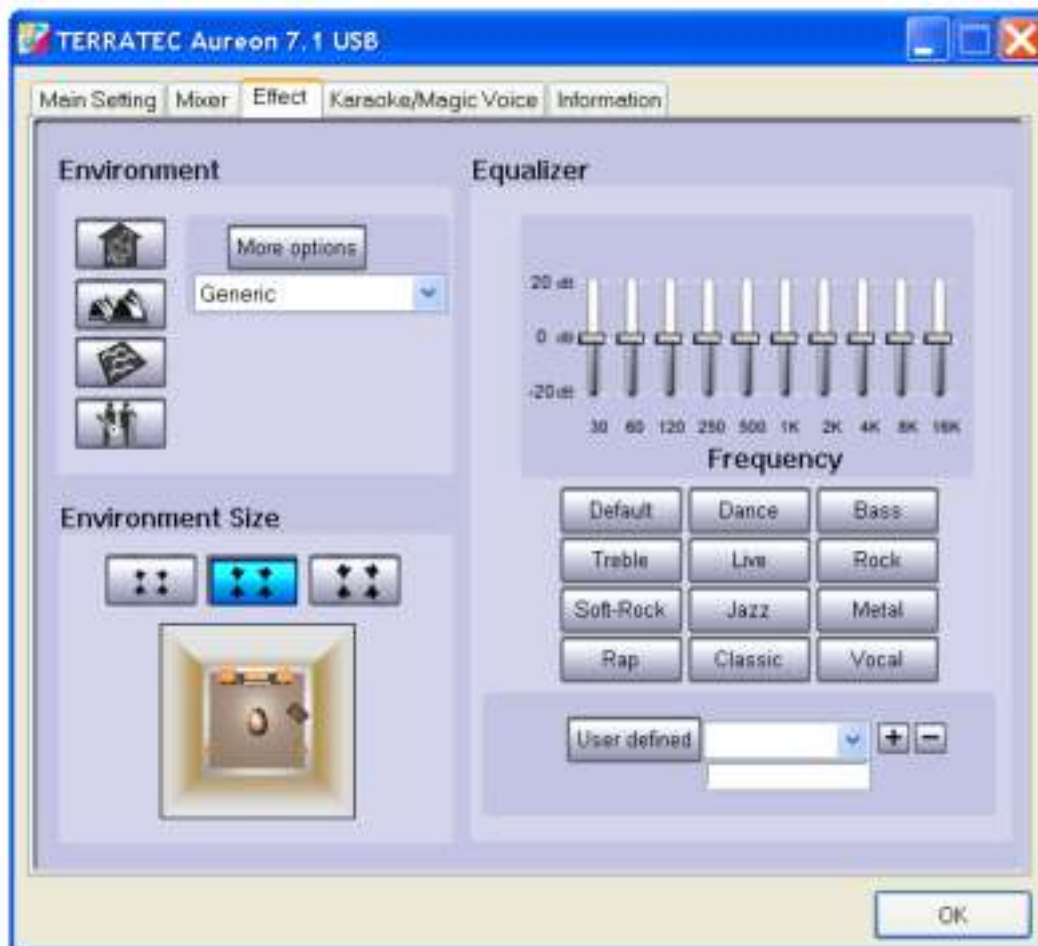

You can use this menu to simulate sound effects. Have fun experimenting with different settings!

#### Environment Size

Select the size of the room in which you have set up the 7.1 speakers. This selection adjusts the volume to the room.

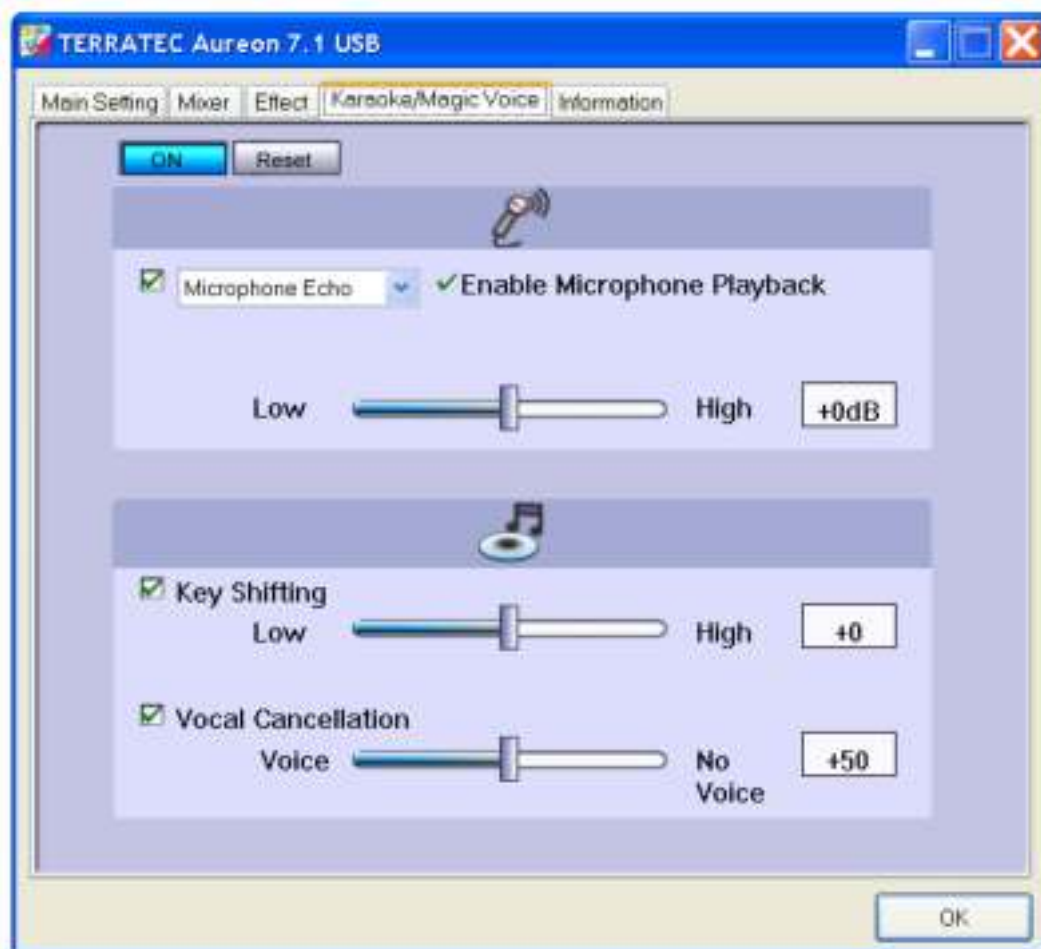

#### Equalizer

Using the integrated equalizer, you can increase or attenuate audio signals in 10 frequency bands to emphasize bass or treble.

### 3.4 Karaoke / Magic Voice

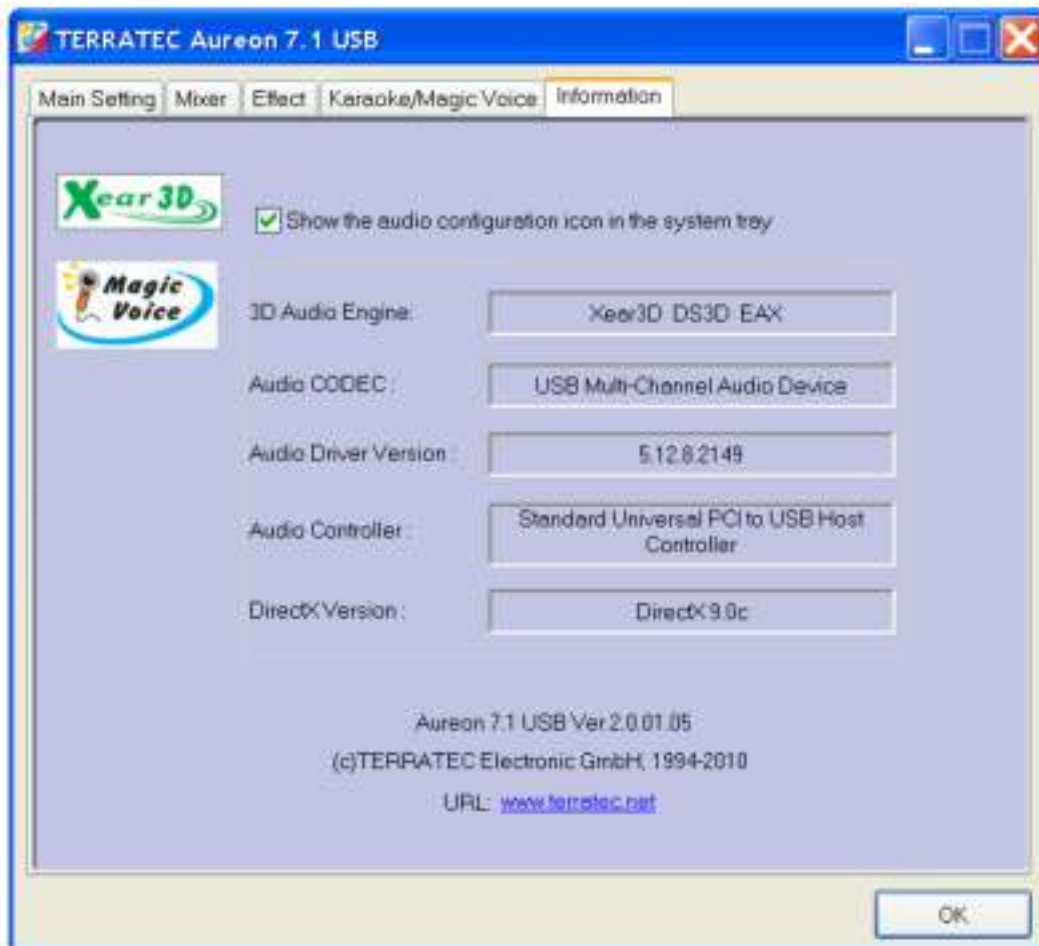

Here you can activate special effects for your microphone input, move the tone of the play or regulate voice suppression.

### 3.5 Information

#### Information

The last tab displays general information about the application. It also allows you to choose whether or not to display the icon for starting the Control Panel in the taskbar.
