

INSTRUCTIONS

1. Put the tree stump in a container filled with enough water to cover it. The water temperature must be less than 35 C° (95 F).
2. The tree stump will slowly break after 24-48 hours, your toucan will emerge. Be sure to keep the container full of water.
3. After the tree stump is broken entirely, add fresh water to the container. Your toucan will continue to expand for 48-72 hours.
4. After 72 hours, you may like to move your toucan to a large container with fresh water, watch your toucan continue to grow.
