

# MIGHTY CHARGER

TRAVEL

Need power for your Smartphone, Cellphone or Tablet but don't have the time to wait to re-charge your alkaline batteries? Simply place a new set of batteries in your **Mighty Charger** and its ready to provide an instant power source to your portable electronic devices.

## HOW IT WORKS:

Chemical reactions within the battery cause electrons to be stripped away from the carbon electrode. Electrons will try to flow from a battery's negative terminal to its positive one, if allowed. As a battery is used this cell gets "disorganized" as Electrons get jumbled trying to make their way to the positive terminal, the Mighty Charger "reorganizes" the internal structure of the battery cell allowing it to be reused up to 40 times!

### Specs:

#### Battery Ni-Cad

Battery Type: AAA  
Capacity: 400 mAh  
Charge Time: 4 H

Battery Type: AA  
Capacity: 800 mAh  
Charge time: 8 H

#### Battery Ni-MH

Battery Type: AAA  
Capacity: 700 mAh  
Charge Time: 6 H

Battery Type: AA  
Capacity: 1300 mAh  
Charge Time: 10 H

#### Battery Alkaline

Battery Type: AAA  
Capacity: 1.5 V  
Charge Time: < 1.4V-2 H

Battery Type: AA  
Capacity: 1.5 V  
Charge Time: < 1.4V-3 H

- Charging AAA or AA batteries is simple and easy via the USB connection cable provided.

#### • Charge and Go!

After the Mighty Charger recharges your Alkaline, Nicad or Ni-MH batteries simply take the unit any place—anywhere to provide instant battery power to your cellphone, smartphone or tablet.

- Unit charges via USB connection (cable included).

#### BONUS FEATURE

- Utilize as a portable battery pack to charge your cellphone, smartphone or tablet.

### 3 Battery chemistries

Ni-Cd

Ni-MH

Alkaline

**WARNING:** DO NOT CHARGE CORRODED OR LEAKING BATTERIES. DO NOT CHARGE LITHIUM BATTERIES.
