## ETI Research Kryo RCA (pair)

€99.00

FREE shipping

Quantity 1

1 ▼

The combination of high-quality materials and precision manufacturing add up to a superior RCA connector, to enhance any audio cable range by allowing the signal to pass through with minimum alteration.

## CONDUCTOR

Silver Plated 1100 Series Copper signal pin with Tellurium Copper return

## HOUSING

Brass (Black Finish)

ETI Research Kryo RCA Connectors utilise the same design as the Brio range of RCA connectors, but with Silver Plating instead of Rhodium. A Tellurium Copper and Silver combination is a hallmark of the entire Kryo line, as is of course a stringent cryogenic treatment process to ensure absolute quality and material strength over time.

ETI Research employs the Silver Plating process as Silver's electrical resistance is lower than Copper; more so at higher frequencies due to the skin effect. And of course, when properly implemented, it's difficult to find a superior method for audio throughput than Silver Plating of Tellurium Copper.

The ETI Research Kryo RCA Connector's innovations and refinements include:

- Major components made from Tellurium Copper with Silver Plating for superior conductivity and long-lasting durability.
- Housings made from Brass for superior vibration damping and high EMI/RF noise rejection.
