# **EMC Test Report**

**Application No.** : HX201002060386

**Applicant**: Shenzhen Meiduojiao Technology Co., Ltd.

**Equipment Under Test (EUT)** 

**EUT Name** : Facial Cleansing Brush

Model No. : GT1933

Serial No. : N/A

Brand Name : N/A

**Receipt Date** : 2020-09-30

**Test Date** : 2020-09-30 to 2020-10-13

**Issue Date** : 2020-10-13

**Standards** : EN 55014-1: 2017

EN 55014-2: 2015

Conclusions : PASS

In the configuration tested, the EUT complied with the standards specified above. The EUT technically

Web: www.hx-lab.com

complies with the 2014/30/EU directive requirements.

**Test/Witness Engineer** 

: Tim Chen

Tel: +86 755-29116082

## Approved & Authorized

This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in the report.

# 1. General Information

## 1.1. Client Information

Applicant	:	Shenzhen Meiduojiao Technology Co., Ltd.
Address	:	Room 108, Office Building 96, Yangyong Road, Tangxiayong Community, Yanluo Street, Baoan District, Shenzhen
Manufacturer	:	Shenzhen Meiduojiao Technology Co., Ltd.
Address	:	Room 108, Office Building 96, Yangyong Road, Tangxiayong Community, Yanluo Street, Baoan District, Shenzhen

## 1.2. General Description of EUT (Equipment Under Test)

EUT Name	:	Facial Cleansing Brush
Model No.	:	GT1933
Serial No.	:	N/A
Brand Name	:	N/A
Power Supply	:	DC 3V, 135-180mA

**Remark:** All above models are identical in schematic, structure and critical components except for only different appearance; therefore, EMC testing was performed with GT1933 only.

## 1.3. Block Diagram Showing the Configuration of System Tested

EUT

# 1.4. Description of Support Units

The EUT has been tested as an independent unit.

Page: 4 of 24

### 1.5. Performance Criterion

**Criterion A:** The equipment shall continue to operate as intended without operator intervention. No degradation of performance of loss of function is allowed below a performance level specified by the manufacturer when the equipment is used as intended.

**Criterion B:** After the test, the equipment shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed, after the application of the phenomena below a performance level specified by the manufacturer, when the equipment is used as intended.

**Criterion C:** Loss of function is allowed, provided the function is self-recoverable, or can be restored by the operation of the controls by the user in accordance with the manufacturer's instructions.

### 1.6. Classification of Apparatus

Category I: Apparatus containing no electronic control circuitry.

**Category II:** Transformer toys, dual supply toys, mains powered motor operated appliances, tools, heating appliances and similar electric apparatus(for example-UV radiators, IR radiators and microwave ovens) containing electronic control circuitry with no internal clock frequency or oscillator frequency higher than 15MHz.

**Category III:** Battery powered apparatus (with built-in batteries or external batteries), which in normal use is not connected to the mains, containing an electronic control circuitry with no internal clock frequency or oscillator frequency higher than 15MHz.

This category includes apparatus provided with rechargeable batteries which can be charged by connecting the apparatus to the mains power. However, this apparatus shall also be tested as an apparatus in category III while it is connected to the mains network.

**Category IV:** All other apparatus covered by the scope of this standard.

### 1.7. Test Facility

The testing report were performed by the The testing report were performed by the Shenzhen HX Detect Certification Co., Ltd., in their facilities located at 5/F, Building B15, Zongtai Cultural and Creative Industrial Park, Yintian Creative Park, Xixiang Town, Bao 'an District, Shenzhen.

## 4. Conducted Emission Test

### 4.1. Test Standard and Limit

### 4.1.1. Test Standard

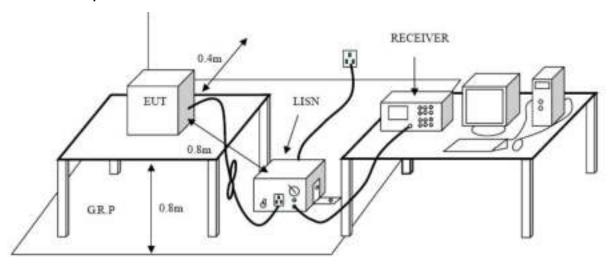

EN 55014-1: 2017.

#### 4.1.2. Test Limit

### Conducted Disturbance Test Limit

Fraguenov	Maximum RF Line Voltage (dBμV)				
Frequency	Quasi-peak Level	Average Level			
150kHz~350kHz	66 ~ 56*	56 ~ 46 *			
350kHz~5MHz	56	46			
5MHz~30MHz	60	50			

### 4.2. Test Setup

### 4.3. Test Procedure

The EUT was placed 0.8 meters from the horizontal ground plane with EUT being connected to the power mains through a line impedance stabilization network (LISN). All other support equipments powered from additional LISN(s). The LISN provide 50 Ohm/50uH of coupling impedance for the measuring instrument.

Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 to 40 cm long.

I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.

Page: 9 of 24

LISN at least 80 cm from nearest part of EUT chassis.

The bandwidth of EMI test receiver is set at 9kHz, and the test frequency band is from 0.15MHz to 30MHz.

## 4.4. Test Condition

Temperature	:	25 ℃
Relative Humidity	:	48 %
Pressure	:	1010 hPa
Test Power	:	DC 3V

## 4.5. Test Data

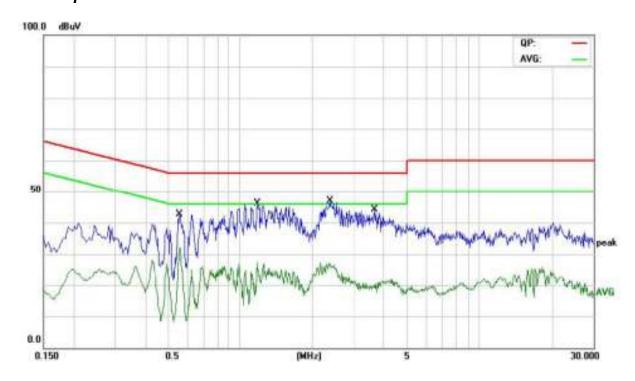

Please refer to the following pages.

## 5. Radiated Emission Test

### 5.1. Test Standard and Limit

### 5.1.1. Test Standard

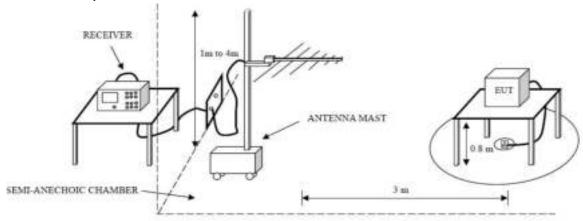

EN 55014-1: 2017.

### 5.1.2. Test Limit

#### Radiated Disturbance Test Limit

radiated Biotarbarios Foot Enrit						
Fraguenov	Limit (dBμV/m)					
Frequency	Quasi-peak Level					
30MHz~230MHz	40					
230MHz~1000MHz	47					
Remark: 1. The lower limit shall apply at the transition frequency.						
2. The test distance is 3m.						

### 5.2. Test Setup

### 5.3. Test Procedure

The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3m. The table was rotated 360 degrees to determine the position of the highest radiation.

The height of the equipment or of the substitution antenna shall be 0.8 m; the height of the test antenna shall vary between 1 m to 4 m. Both horizontal and vertical polarizations of the antenna are set to make the measurement.

The initial step in collecting radiated emission data is a spectrum analyzer peak detector mode pre-scanning the measurement frequency range.

If the Peak Mode measured value compliance with and lower than Quasi Peak Mode Limit, the EUT shall be deemed to meet QP Limits and then no additional QP Mode measurement performed.

# 6. Electrostatic Discharge Immunity Test

### 6.1. Test Requirements

### 6.1.1. Test Standard

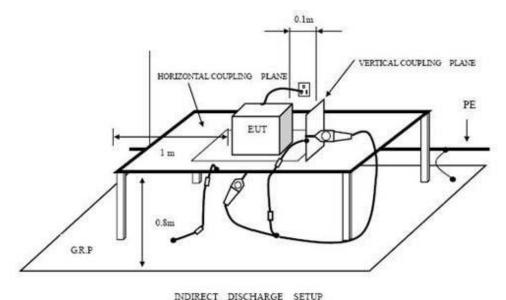

EN 55014-2: 2015 (EN 61000-4-2:2009)

#### 6.1.2. Test Level

Level	Test Voltage Contact Discharge (KV)	Test Voltage Air Discharge (KV)		
1.0	±2	±2		
2.0	±4	±4		
3.0	±6	±8		
4.0	±8	±15		
Х	Special	Special		

### 6.1.3. Performance criterion: B

## 6.2. Test Setup

### 6.3. Test Procedure

### 6.3.1. Air Discharge:

This test is done on a non-conductive surface. The round discharge tip of the discharge electrode shall be approached as fast as possible to touch the EUT. After each discharge, the discharge electrode shall be removed from the EUT. The generator is then re-triggered for a new single discharge and repeated 10 times for each pre-selected test point. This procedure shall be repeated until all the air discharge completed.

### 6.3.2. Contact Discharge:

Page: 17 of 24

All the procedure shall be same as air discharge. Except that the tip of the discharge electrode shall touch the EUT before the discharge switch is operated.

### 6.3.3. Indirect discharge for horizontal coupling plane

At least 10 single discharges (in the most sensitive polarity) shall be applied at the front edge of each HCP opposite the center point of each unit (if applicable) of the EUT and 0.1m from the front of the EUT. The long axis of the discharge electrode shall be in the plane of the HCP and perpendicular to its front edge during the discharge.

### 6.3.4. Indirect discharge for vertical coupling plane

At least 10 single discharges (in the most sensitive polarity) shall be applied to the center of one vertical edge of the coupling plane. The coupling plane, of dimensions 0.5m X 0.5m, is placed parallel to, and positioned at a distance of 0.1m from the EUT. Discharges shall be applied to the coupling plane, with this plane in sufficient different positions that the four faces of the EUT are completely illuminated.

### 6.4. Test Data

Please refer to the following page.

Page: 18 of 24

# 7. Radiated Electromagnetic Field Immunity test

### 7.1. Test Requirements

### 7.1.1. Test Standard

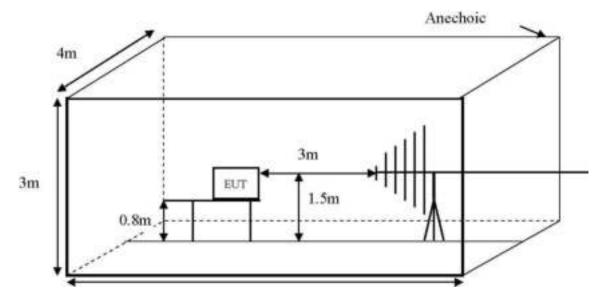

EN55014-2: 2015 (EN 61000-4-3: 2006 + A1: 2008 + A2:2010)

### 7.1.2. Test Level

Level	Field Strength V/m
1.0	1
2.0	3
3.0	10
X	Special

#### 7.1.3. Performance criterion: A

## 7.2. Test Setup

### 7.3. Test Procedure

The EUT are placed on a table, which is 0.8 meter high above the ground. The EUT is set 3 meters away from the transmitting antenna, which is mounted on an antenna tower. Both horizontal and vertical polarization of the antenna is set on test. Each of the four sides of the EUT must be faced this transmitting antenna and measured individually.

In order to judge the EUT performance, a camera is used to monitor its screen.

Page: 20 of 24

All the scanning conditions are as following:

Condition of Test	Remark		
Fielded Strength	3V/m (Severity Level 2)		
Radiated Signal	Modulated		
Scanning Frequency	80-1000MHz		
Sweep time of radiated	0.0015 Decade/s		
5. Dwell Time	1 Sec.
