Battery

Bottom Function

- ① DPI button
- ② Left button
- ③ Scroll wheel
- ④ Right button

- ⑤ Backward function
- ⑥ Forward function
- ⑦ Removable palm rest

Features

- 2.4G wireless technology, 16 channel intelligent frequency.
- Intelligent low-voltage indicator function.
- Advanced laser engine, accurate location, fast and flexible.
- With ON/OFF switch, OFF mode would save power.
- Intelligent power-saving mode, prolong the battery time.

Tips:

- Please take out the batteries if you do not use the wireless mouse for long time, and keep them in a cool and dry place.
- Please do not use the battery if leaking, discoloration, distortion or other abnormality happens.

Battery installation

1. Open the battery cover
2. Put battery in correct direction
3. Cover the battery cover

In order to achieve the best economical effect, the intelligent power saving technology is adopted. When your mouse stops moving, it will switch to the power-saving mode automatically. If your mouse stops working for about 8 minutes, it will enter the deep power-saving mode, which costs little battery.

Tips:

Keep the ON/OFF switch on OFF mode if you do not use the mouse for a long time.

It will save more power to use the mouse on light color media than the dark one.

Connection of the receiver

Connecting the receiver to the PC by the USB port, for desktop, USB extending port or front-set USB port is better.

When receiver plugs into USB port, computer would detect the device automatically. Mouse could works normally with ON mode. If the mouse couldn't work normally, should build up connections between the mouse and receiver.

Building up connection between the mouse and receiver

In case the connection is lost, please establish a connection again between mouse and receiver by completing the following:

1. Turn on the mouse. Press left, right and middle (scroll wheel) buttons at the same time, red LED under scroll wheel will flash.
2. Plug the receiver into USB port of the computer.
3. The red ELD will turn off when the connection is established.

Working Environment

- The radio signal can penetrate lignin, glass and other the non-metallic objects, realizing 360 degree free transmit, however, it can not penetrate the metal materials. So please do not put the mouse, keyboard and the receiver onto the metallic tabletop. The ideal distance is above 20 CM.
- Please be sure there is no big metal between the mouse and receiver, otherwise the connection will be affected; for desktop, USB extending port or front-set USB port is better.
- The receiver should be far away from the monitor, outside disc driver or other electronic products. 20 CM distance is suggested in order to prevent the radio disturbance produced by other electronic products.
- The mouse is suitable for operating media wooden, paper or cloth, but not for the lens cover, such as glass and smooth rubber. A mouse pad is needed in such environment.
- The standardized receiving distance we offered is under certain radio disturbance environment, the normal environment are better, the actual receiving distance is higher than standardized, but if mix-machine, motor, electric drill and other strong electronic equipments operating nearby, which may lead to slowly receiving or other abnormality.

Debugging tips

- Check the receiver again, and make sure it is connected to the USB port.
- Check the battery direction should be correct.
- Put the "on-off" button to "on".
- Check the battery capacity.
- Reduce the distance of the receiver and the mouse.
- Re-establish the mouse and the receiver communication channel.
