

Oven Mitt

Domestic Oven Mitts are designed to offer protection from contact with hot cookware and unintentional contact with ovens. Our products comply with EU Regulation 2016/425. They are tested to

EN ISO 12127-1 at 250 degrees centigrade up to a maximum of 25 washes, and to BS6526:1998.

Having been designed as a household item to match our range of co-ordinated kitchen textiles, they are not intended for commercial use or prolonged contact with hot items and should not come into contact with naked flames. Please ensure that your oven glove is completely dry before use, as its thermal insulation properties may be reduced when wet.
