

# PURE LOOP 2 FX

Intensively developed filter media with an ultra-fine filter. Due to the high speed of the pump, the filter is equipped for efficient and safe water purification. The fine filter media designed for water removal from water with a high pressure. The ultra-fine filter media has a high efficiency and low energy consumption.

The specially developed filter media for the ultra-fine filter has a high efficiency and low energy consumption. The filter media is designed for water removal from water with a high pressure. The ultra-fine filter media has a high efficiency and low energy consumption. The filter media is designed for water removal from water with a high pressure. The ultra-fine filter media has a high efficiency and low energy consumption.

The ultra-fine filter media is designed for water removal from water with a high pressure. The ultra-fine filter media has a high efficiency and low energy consumption. The filter media is designed for water removal from water with a high pressure. The ultra-fine filter media has a high efficiency and low energy consumption.

The ultra-fine filter media is designed for water removal from water with a high pressure. The ultra-fine filter media has a high efficiency and low energy consumption. The filter media is designed for water removal from water with a high pressure. The ultra-fine filter media has a high efficiency and low energy consumption.
