

## Changing the carbon filters

1

Unplug the appliance from the main electricity supply.

Slide the buttons down on either side of the shrouds.

2

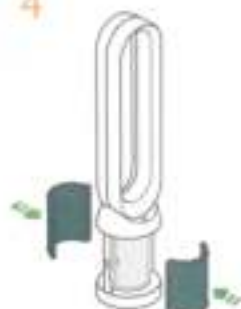

The shrouds will release with the glass HEPA filters attached.

3

To remove the carbon filters pull the tabs on both sides of the filters. Dispose of the carbon filters in the bin.

4

Push the new carbon filters onto the base until secure.

5

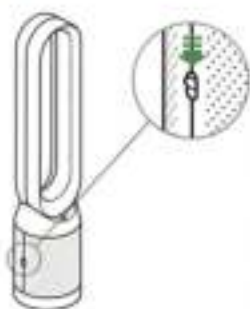

Push the shrouds until they click back into position in the base.

6

Plug the appliance in to the main electricity supply and switch on.

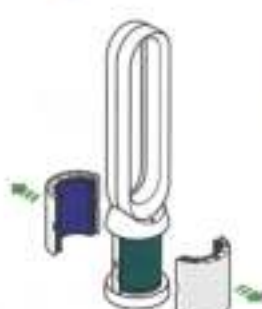

1

Unplug the appliance from the main electricity supply.

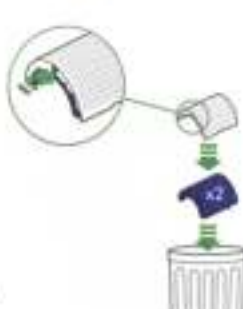

Slide the buttons down on either side of the shrouds.

2

The shrouds will release with the glass HEPA filters attached.

3

Empty the glass HEPA filters directly into the bin by pushing in both the purple tabs on the shrouds.

4

Push the new glass HEPA filters onto the shrouds until secure.

5

Push the shrouds until they click back into position in the base.

6

Plug the appliance in to the main electricity supply and switch on.

## Important

7

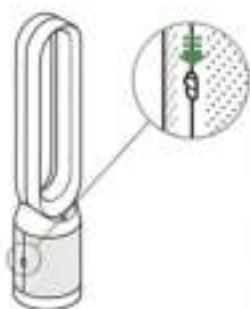

Press and hold the Oscillation button on the remote control.

The display on the appliance will countdown from five, flashing with the default screen. The carbon filter level will be reset and the appliance is ready to use.

## Changing the glass HEPA filters
