1. Area of application of your GARDENA Hand Cylinder Lawnmower

Correct use:

The GARDENA Cylinder Lawnmower has been designed for cutting lawn and grass areas of private houses.

Compliance with these operating instructions provided by GARDENA is a prerequisite for using the cylinder lawnmower correctly.

Please note:

The cylinder lawnmower may not be used for cutting climbing plants or grass on roofs, due to the danger of bodily harm.

2. Safety Instructions

Checks before each operation:

Before use, an inspection is always to be performed in order to determine that all nuts, bolts and working tools are not worn down or damaged. Worn down or damaged blades are to be replaced in sets.

Inspect the surface on which the lawn mower is to be used beforehand. Stones, pieces of wood and wires as well as other solid matter are to be removed.

Objects, which are contacted by the cutting tools, could be thrown out uncontrollably.

Proper use / responsibility:**DANGER!**

Take note that the rotating blade cylinder could cause injuries.

→ **Never place your hands or feet on or under moving parts.**

Do not use the lawnmower while people, especially children, or animals are nearby. The operator is liable for damages.

The safety distance between the blade cylinder and the operator that is created by the guiding spar is to be always maintained.

When mowing embankments and slopes, special care must be taken:

→ Make sure you always keep a safe distance and wear shoes with a nonslip sole. Always cut diagonally to the slope.

Take special care when moving backwards and when pulling the lawnmower. Danger of stumbling!

If the cutting tools or the lawnmower run into an obstruction and/or solid objects, the lawnmower should be properly and thoroughly inspected.

→ Only work when visibility is good.

Never leave the lawnmower unattended. If your work is interrupted, store the mower in a safe place.

Warning! Keep toddlers away when you assemble the unit. Small parts can be easily swallowed. There is also a risk that the polybag can suffocate toddlers.

3. Assembly

1. Insert lower upright holder ④ into upper upright holder ② (already preassembled).
2. Insert upper part of upright ① up to stop in upper upright holder ②.
3. Insert both lower uprights ③ up to stop from underneath in lower upright holder ④.
4. Insert threaded rod ⑤ on side with square hole right through upright holder ②.
5. Screw clamping nut ⑥ onto threaded rod ⑤.
6. Insert both lower uprights ③ into upright holders ⑦ (pressing rods together slightly) until bolts ⑧ in upright holder bearings ⑦ engage.

Tip:

Allow to engage first on one side, then on the other.

4. Operation

Mowing correctly:

To produce a well-maintained lawn we recommend cutting the lawn regularly once a week if possible. The lawn becomes thicker if cut frequently.

Relatively long cut grass (> 1 cm) must be removed so that the lawn does not become yellow and matted.

After relatively long intervals between mowing (e.g. **holiday**), first of all cut in one direction with the cutting height as high as possible (42 mm), then cut in the crosswise direction at the cutting height required. The blades of grass should not be more than 12 cm long if they are to be cut with a cylinder mower.

If possible only cut the grass when it is dry. If the grass is damp, the cutting pattern will be uneven.

Adjusting the cutting height:

The cutting height can be set to any position from 12 mm to 42 mm in 4 steps.

1. Lay the mower onto the ground, so that it cannot fall over when adjusting the cutting height.
2. Pull both height adjustment mechanisms ⑨ and allow them to engage at the required height on the scale ⑩.

The height adjustment mechanisms ⑨ must always be set to the same height on both sides.

CAUTION! The mower may only be adjusted to a depth in which the lower blade does not touch the ground when it is uneven.

5. Putting into Storage

Storage:

→ Clean cylinder mower before storage (see 6. Maintenance) and store in a dry place.

To save space, the upright can be collapsed by opening up the clamping nuts.

6. Maintenance

Cleaning the mower:

**DANGER!**

Cutting mechanism can cause injuries!

→ Wear suitable work gloves when undertaking maintenance.

**CAUTION!**

Damage to cylinder lawnmower!

→ Never clean your cylinder lawnmower with running water, in particular with water under high pressure.

Always keep the lawnmower clean and remove grass deposits. Deposits affect the cutting result as well as discharge of grass clippings. Residual dirt and grass is easily removed immediately after mowing.

1. Remove grass deposits with a brush and a cloth.
2. Oil the blade cylinder and the lower blade with thin oil (e.g. sprayed oil).

7. Troubleshooting

**DANGER!**

Cutting mechanism can cause injuries!

→ Wear suitable work gloves when rectifying faults.

Problem	Possible Cause	Remedy
Abnormal Noises	Screws/components loose.	→ Tighten screws.
	Foreign bodies on the blade.	→ Remove foreign bodies.
	Notch in the blade.	→ Remove notches with grindstone.
	Blades are striking each other too hard.	→ Adjust cutting mechanism.
Lawn is not cleanly cut	Blade adjustment incorrect.	→ Adjust cutting mechanism.
	Blade blunt.	→ Regrind or replace blade.
	Grass too long (e.g. after a relatively long absence).	→ Cut lawn shorter with a sickle.

Adjusting the cutting mechanism:

Regrinding / repairs:

The cutting gear of your cylinder mower was optimally adjusted before leaving our company. If, after longer use, a clean cut of the grass is no longer possible or the blade roller contacts the lower blade, then the lower blade should be adjusted as follows:

1. Clean the cylinder mower.
2. Lay the mower onto the ground, so that it cannot fall over when adjusting the cutting mechanism.
3. Check cylinder ⑪ and lower blade ⑫ for notches and remove these with a grindstone if necessary.
4. Unscrew the left and right hexagon screws ⑬ using a hexagon wrench (10 mm) anticlockwise until the blade cylinder ⑪ can only just turn freely.
5. Carefully tighten the left hexagon screw ⑬ using a hexagon wrench (10 mm) whilst the blade cylinder ⑪ rotates, until it lightly contacts the lower blade ⑫.
6. Then unscrew the left hexagon screw again until the blade cylinder just stops contacting the lower blade (rotates soundlessly).
7. Repeat the process on the right-hand side.
8. **Cutting test:**
Place a strip of paper ⑭ in such a way on the lower blade ⑫ that it points towards the spindle of the cylinder ⑪.
9. Turn cylinder ⑪ carefully.
If the lower blade is set correctly ⑫ the paper will be cut off as if with scissors.
10. Repeat the cutting test at different positions and on all blades on the blade cylinder ⑪.

On safety grounds, only original GARDENA spares may be used.

Please contact GARDENA Service if it is necessary to replace the cutting tool, which will only become blunt after several years use if well-maintained. Repairs to the cylinder mower and the installation of the blades can be undertaken by suitable specialist workshops.

Have the cylinder mower checked over in the autumn if possible so that it is ready for use immediately when the next lawn-mowing season starts.

For any other malfunctions please contact the GARDENA service department.
