

INSTRUCTION MANUAL

Rotar Fan Brass 102468

Rotar Fan Nickel 102469

Rotar Fan Bronze 102470

Rotar Fan White 102978

Rotar Fan Black 102979

Enjoy the natural wind

Please keep this manual.

Be sure to read the instructions for use of this product, install and use this product in accordance with the requirements thereof.

Before using the product, please carefully read the manual and install in strict accordance with the original instruction book.

1. The product is suitable for AC220V 50Hz special.
2. Ceiling fan must be installed in compliance with the safety requirements according to national electrical power lines. If you lack of electrical knowledge, be sure to seek a licensed professional electrician to install.
3. Before the ceiling fan installation, removal, be sure to turn off the power, when you install a ceiling fan, each part must be determined lock screws securely.
4. Ceiling fan must be installed on a solid ceiling, ceiling fan installation position must be able to withstand more than 30KG or more gravity.
5. The blade with the top plane distance not less than 20cm (less than 20cm (bowl with no wind)).
6. you must install a central three terminals disconnection switch in the power supply side of the fan (user supplied).
7. The installation must be grounded and wire positive, negative line order of installation, disassembly must be negative line, the positive wire, grounding wire disassembly of electrical shock.
8. To avoid personal injury, fan blades should be installed off the floor at least 2.3 m. Do not bend during installation and cleaning blades and fast frame, the blades maintain balance, keep clean the ceiling fan. Keep fan gap always between ceiling plates.
9. In order to avoid electrical shock or fire accident, prohibited the use of non-protection of the ceiling fan wall switch or remote control.
10. To change the direction of the ceiling fan running, turn off the power switch and then adjust the reversing fan to be stopped.
11. Strictly prohibited other brands ceiling fan parts and the company's products with the use of essential spare parts and screws installed or modified, otherwise will be a safety risk.
12. When installing multiple ceiling fans, do not replace the use of spare parts, to avoid fan imbalance.
13. When selecting bulbs, please note that the maximum single lamp power should not exceed 60W.
14. If the electric elements damaged, it must provide the appropriate parts from the manufacturer or Service, and please replace qualified professionals, to avoid a hazard.
15. Different styles, different structure, installation method slightly different, please refer to the Instructions prevail. If in doubt, please consult the factory.
16. the appliance is not to be used by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction.
17. children being supervised not to play with the appliance.
18. WARNING: If unusual oscillating movement is observed, immediately stop using the ceiling fan and contact the manufacturer, its service agent or suitably qualified persons.
19. the replacement of parts of the safety suspension system device shall be performed by the manufacturer, its service agent or suitably qualified persons.
20. If the manual is lost, You can go to the seller's office to check the DVD electronic manual or the seller's official website.

Product Parts List

Please study the instruction manual and below information carefully before installing or using this product. Please keep this user manual for further reference

1. The luminaires may only be installed by authorized and qualified technicians according to the valid regulations for electrical installation.
2. Maintenance of the luminaires is limited to their surfaces. During maintenance no moisture can come into contact with any areas of the terminal connections or voltage control parts.
3. The electrical supply must be switched off at the outset, preferably by means of a switch in the distribution box, before any installation, maintenance or repair work is undertaken.
4. Exterior lighting must not be installed during rain.
5. Take account of the minimal separation distance from other objects and the room required around the fitting.
6. If in any doubt, consult a professional, taking local installation requirements into account. Some countries stipulate that lighting may be installed only by registered installers.
7. Clamping screws in electrical connections must be adequately tightened. This is particularly the case with 12V low voltage conductors.
8. When replacing a halogen lamp, wait for it to cool, for a minimum of 5 minutes.
9. Clean with a clean, dry cloth or brush, use no solvents or abrasives. Avoid dampness on all electrical components.
10. Take account of all available technical information.
11. Take note of the symbols when connecting wires:

N =Neutral **L =Live** =Earth

12. Meaning of symbols:

- For indoor use only, where direct contact with water is impossible
- This icon indicates the level of water-proof and dust-proof
- Protection Class I: the fitting must be earthed
- Protection Class II: the fitting is doubled insulated and does not require earthing
- Protection Class III: the fitting is low voltage
- Minimum distance from lighted objects (meters)
- Only the self-shielded halogen lamp should be used with the luminaire
- Strip the wire to the indicated length (mm); different items require different length
- Connect using the specified cable; different items require different cables
- The type of lamp and maximum size and wattage indicated in each lighting unit must not be exceed; different items require different kind of light sources with different bulb icons
- The armature is designed to work only with the indicated voltage. Different items require different working voltage.
- The luminaire can be used in combination with a dimmer
- The reference light angle and light space of the luminaire
- This luminaire cannot be disposed together with normal domestic waste in standard rubbish can, but you have to bring it to a staging area for electrical waste

Ceiling Fan FAQs and repair methods

Symptom	Maintenance guide
Fan does not turn	<ol style="list-style-type: none"> 1. Check the position of small box input power cord has power, the wall switch is turned on 2. check the wiring (Special note on a white ceiling fan line is the zero line) 3. with a rope and installed a remote control or a wall, there is no open check rope switch, be sure to pull 4. Check the fan remote control switch is turned on, whether the battery electric remote control. 5. Check the reversing switch is pulled in place, you can not pull the reversing switch to the middle position
Fan noise	<ol style="list-style-type: none"> 1. Make sure the fan is not subjected to severe impact before installing 2. Check whether the locking screw lock blade, leaf frame lock motor screws are tight 3. Check whether the collision rotatable member to a non-rotatable member 4. Check whether the installation stepless speed control switch, and if so, to replace the capacitor wall control speed. 5. Check whether the fan circle screws, washers, wire nuts or other debris
Oscillating fan	<ol style="list-style-type: none"> 1. Check the boom upper and lower ends connecting screws are tight, whether there is card registration job notch hanger lug (see step 6) 2. Check whether the locking screw blades, check the motor lock leaf frame screws are tight 3. Check the lighting installation screws are tight, check the positioning adhesive has not removed
Bulb does not light	<ol style="list-style-type: none"> 1. Check the position of small box input power cord has power, the wall switch is turned on 2. Check the wiring is correct (Special note on a white ceiling fan line is the zero line) 3. fitted with a rope and a remote control or a wall, there is no open check rope switch, be sure to pull 4. Check the fan remote control switch is turned on, whether the battery electric remote control. 5. Check the light source itself is good
<p>If the maintenance overhaul by the above methods have problems, please contact our technical staff, please understand the inconvenience!</p>	

note

Ceiling fans have been manufactured before because many power test, so the probability of the product itself, the problem appears very low, or if the fan does not turn light does not appear; or the fan interaction with carnivals and other issues, please be sure to carefully check the wiring is correct under (especially the wall control mode)

Installation steps

1, the installation hanger

Wood ceiling: the wooden hanger screw directly on the lock to a thickness greater than 7 cm square wooden beams.
Cement Ceiling: $\varnothing 8$ drill hole with 4 cm deep, with expansion screws hanger lock on it.

note

After the hanger fixed, it must be determined to withstand more than 30 kilograms of tension!

6, a ceiling fan hung on hangers to ensure job groove and hanger lug match.
