

USER MANUAL

(Submersible LED Light with Magnet, Suction Cup, RE Remote)

13 LEDs

Magnet

Suction Cup

RF Remote

IP68 Waterproof

AA Battery

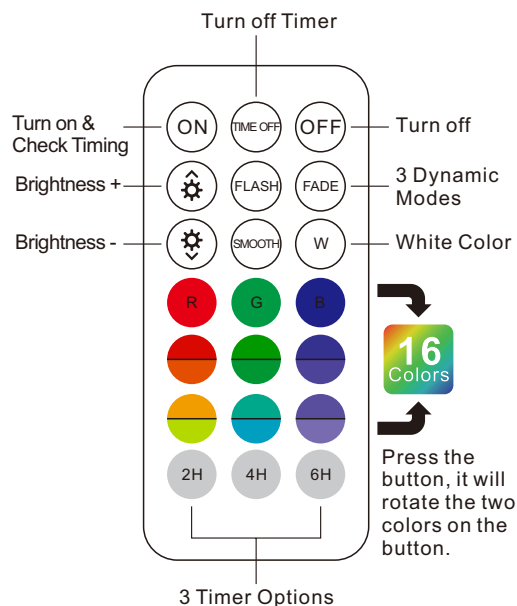

16 Colors

General Description

It works well in both wet and dry place, such as swimming pool light, pond light, boat, foundation, aquarium fish tank, vase, flower pot, waterfall, bathtub, hot tub, and hallway, basement, garage, state, showcase, festival, holiday like Halloween, Christmas, wedding, birthday, event, party and other occasions as decor light, ambience light, night light indoor and outdoor decoration.

Feature

Unit Dimension	Ø85 * 30 mm
Increase	Magnets, Suction Cups
LED	13 LED
Waterproof	Ip68
Color	RGB (16 Colors)
Color Changing	Yes
Dimmable	Yes
Control by	Radio Frequency
Dynamic Mode	Flash, Fade, Smooth
Timer	2H, 4H, 6H
Light Battery	3x AA (not included)
Remote Battery	1 x Cr2025 Button Cell (included)
Light Battery Life	35-50 Hours (depends on the batteries and display mode
Remote Battery Life	3-6 Month
Max Remote Range	164FT/50M (in air), 16.4FT/5M (in water)
Power	0.3-1.3w

Tips for Timer Option

1. Button "2H"

(It means 2 hours on, and 22 hours off, circled by 24 hours) Step: Press 2H button→the light will keep on for 2 hours → it will turn off automatically (be off 22 hour) → light will turn on automatically again, and keep on 2 hours →le again in 24 hours (until the battery powers off)

2. Other timer options are same

"4H": 4 hours on, 20 hours off;

"6H": 6 hours on, 18 hours off;

"TIME OFF" Turn off timer, light will keep on until the battery powers off.

3. Check the left time of timer

keep the light on, press the button "ON", how many times it flashes it means how many hours it left.

Tips for Waterproof

1. Please make sure the sealing ring is undamaged, and properly stay in the groove.
2. Please twist up tightly, twist the light until the cap can not be twisted any further, to make it fully waterproof before putting it into water. (Very Important !!! please note and use it in the correct way)
3. Please dry the lights first before replacing batteries. Because the water outside lights may drop into lights and keep inside the battery case, it will damage the components, and defeat the lights. (Very Important!!!)
4. It's better not use in hot water, because the vapour may go into the light, it will damage the components and lead to stop working.
5. Please keep the remote dry from water, because it's not waterproof, water will make it stop working.
6. It can not be used in beverage, and it is not intended for children under age of 6.
7. Avoid directly looking at the bulb when activated.

Tips for Battery

1. Please don't use bad quality battery, it will influence the brightness of the light and the service time, and it will harm for the light bulb too.
2. For long time use, we recommend to use rechargeable battery like Ni-Mh battery to save batteries and money.
3. We don't suggest using carbon core battery, because it's lightweight, and will make the light floating.
4. If you don't use for flowing long time, please remove batteries, it will help save battery energy and protect led bulb.

Tips for Remote Control

1. Please remove the plastic insulating film on the bottom of remote before using it, and keep the remote dry, because its not waterproof.
2. Please long press the button "ON" on the remote for about 2 second to activate all the lights. After turning on, no need to long press, the light will be very sensitive to react what you set. (very Important!!)
3. Because our remote is radio frequency, so it may be disturbed by the signal nearby, please try to turn off other signal source nearby or keep closer to the lights.
4. For underwater using, please keep the remote within 10FT/3M-16.4FT/5M, because water will largely absorb signal, and weaken the signal to the lights.
5. In air, the remote range can reach 164FT/50M and more.

Tips for Suction Cups

1. Can be used in both air and underwater on flat and smooth surfaces. (not rough surface)
2. Please clean the surface before attaching, make sure there is not any stuff between the surface and suction cup, especially remember to remove the lubricant like shower cream, moss etc. (very Important!!)
3. Please pull the suction cups vertically if you want to remove them, don't pull it horizontally, it may pull out from the hole, there is the feature of design, it's not suction cup problem. Please note and use it in correct way. (very Important!!!)

Tips for Magnetic

1. It's perfect for any iron place which can be attracted by magnet, especially rough vertical surface, but not for smooth vertical surface, please use suction cup instead.
2. The magnet is strong, but it's better to apply on pure iron surface, alloy may reduce the absorb effect.
