

Mountaindrop Shilajit

What is it

Shilajit is a rare, resinous substance found in the mountain regions of Tibet, the Himalayas, the Caucasus and the Altai Mountains in southern Siberia. It has an intense black color and a viscous texture. Shilajit has been formed by nature after a process that lasted thousands of years.

Why is it important?

Shilajit is astoundingly rich in organic minerals, amino acids, nutrients and fulvic acid. However, one of shilajit's top benefits is its naturally occurring fulvic acid as it provides superior absorption of nutrients in the body.

Pure shilajit resin comprises of 85+ beneficial nutrients, such as vitamins and minerals in ionic form, amino acids, phospholipids and approximately 2%-10% naturally occurring acids.

Shilajit history

Word 'shilajit' derives from Sanskrit, which means 'the invincible rock', 'the conqueror of the mountains', and 'the destroyer of all weakness'. Shilajit has been used and respected across many cultures such as Asia, Persia, and Middle Eastern countries. It has been a key component for Ayurvedic culture, highly valued for rejuvenation and support of the immune system. Tibetans have also utilized shilajit in their traditional healing practices, as they often turned to it for its abilities to support digestion, longevity and for its anti-ageing properties.

Shilajit is much more than just an energy booster substance. It is a powerful biostimulant that can improve your physical and mental strength, delay the effects of ageing, enhance libido and brain function, promote recovery and much more!

Unique Product

Certified like no other product in the market.

Mountaindrop Shilajit
