

Animal Repeller Manual

Thank you for choosing our animal repeller.

Please read these instructions to understand how the repeller works and keep the manual for future reference.

This animal repeller is designed to help you get rid of unwanted animal visitors such as dogs, cats, deer, squirrels etc. The repeller is operated through a sophisticated 'Passive Infrared' (PIR) detection system that detects movement and triggers short bursts of powerful ultrasonic sound waves that humans cannot hear. The PIR method of repelling animals is also a safe and humane solution to keeping the unwanted animals away.

1. Technical Parameter

Frequency: 18KHz-60KHz

Power Supply: 3 x AA batteries.

Effective distance: illi max 8m (depending on the weather and surroundings,

Detecting angle: 120° horizontal (depending on the weather and surroundings)

2. Assembling Parts and Features
