We used a 200-m<sup>2</sup> quadrat and a grid of 100 cm squares to sample the area. We recorded all species and their abundance in each square. The quadrat was divided into four 50-m<sup>2</sup> plots, which were randomly assigned to each of the four sampling methods. The four methods were: (1) point sampling, (2) line transect sampling, (3) quadrat sampling, and (4) a combination of quadrat and point sampling.
