8. Do not use sharp tools for assembly.
9. The product is intended solely for lighting decoration purposes; it is not suitable for lighting domestic rooms to improve their visibility.

**BURNING ONE LED DOES NOT TURN OFF THE SET!
THE PRODUCT IS INTENDED FOR INDOOR USE.**

Information for the consumer on the handling of used electrical and electronic equipment:

Worn-out electric and electronic equipment must not be disposed of with other household waste. Such equipment should be collected selectively, as indicated by the attached marking - a crossed-out wheeled waste container. Failure to comply with the above principle, in the case of improper disposal of used equipment, may pose a threat to the environment and human health, resulting from the presence of hazardous components in the equipment, such as, for example, electrical wiring, plastic, switches, etc. collected and properly processed by specialized companies. It is forbidden to dismantle the used equipment yourself. Waste electrical and electronic equipment can be returned to the store where it was purchased free of charge. Then it is transferred to a specialized organization dealing with processing, recovery, including recycling and disposal of hazardous components. Households play an important role in contributing to the reuse and recovery, including recycling of waste equipment. This is done in particular through active participation in the used devices collection system.

BATTERY AND ACCUMULATORY INFORMATION

- Keep the batteries / accumulators out of the reach of children.
- Do not store batteries / accumulators in easily accessible places, as there is a risk of them being swallowed by children or pets. If swallowed, see a doctor as soon as possible.
- Leaking or damaged batteries / accumulators can cause burns if they come into contact with the skin, so always use appropriate protective gloves when touching them.
- Batteries / accumulators must not be short-circuited, dismantled or thrown into fire. There is a risk of an explosion!
- Normal disposable batteries must not be recharged as there is a risk of explosion! Only recharge the batteries intended for this purpose, using the appropriate charger.

- Always insert the batteries / rechargeable batteries with the correct polarity (plus / + and minus / -)
