

The Magnetic Locks Construction

* About the Products

This product is designed to prevent children from opening the drawer, in the old model we changed the magnetic lock key design to make it easier to use, but also let your child grow up in a safe environment.

* Install Steps

1. Place the latch on the insulation mat

2. Put the lock into the insulation mat

3. Peel off the 3M adhesive tape of latch and lock

4. Reverse the insulation mat

5. Use the magnetic to open the lock

6. Place the key on the side of the table

How to keep it unlocked?

* Points to note:

1. Make sure the sticking surface is clean and dry before installing.
2. Better to wait 12 hours to use the locks after installing.
3. When the temperature is low, you can use a hair dryer to heat the adhesive pads so that they will stick more firmly.
4. If you want to remove the latches, you can heat them with a hair dryer for about one minute; then they will come off easily!
5. The upgraded cabinet locks provide screws for parents who demand a higher security to make a double insurance. We suggest that you can install it or not depending on the actual situation.
6. The key of the magnetic lock should be kept out of the reach of children.
