

TEST REPORT

Report No.: STS220617004001E

Product: Mobile Phone

Model No.: RP-202

Applicant: J&J Company bv

Address: Hogerlucht 122a, 9600 Ronse, Belgium

Issued by: Shenzhen NTEK Testing Technology Co., Ltd.

Lab 1/F, Building E, Fenda Science Park, Sanwei Community,

Location: Xixiang Street, Bao'an District, Shenzhen 518126 P.R. China

Tel: 400-800-6106, 0755-2320 0050 / 2320 0090

This test report consists of **66** pages in total. It may be duplicated completely for legal use with the approval of the applicant. It should not be reproduced except in full, without the written approval of our laboratory. The client should not use it to claim product endorsement by NTEK. The test results in the report only apply to the tested sample. The test report shall be invalid without all the signatures of testing engineers, reviewer and approver. Any objections must be raised to NTEK within 15 days since the date when the report is received. It will not be taken into consideration beyond this limit.

TEST REPORT IEC/EN 62368-1

Audio/video, information and communication technology equipment Part 1: Safety requirements

Ratings Input: 5.0VDC 1.0A

| TEST ITEM PARTICULARS: | |
|-----------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Classification of use by: | ☑ Ordinary person ☐ Instructed person ☐ Skilled person ☑ Children likely to be present |
| Supply Connection: | ☐ AC Mains ☐ DC Mains ☑ External Circuit - not Mains connected - ☑ ES1 ☐ ES2 ☐ ES3 |
| Supply % Tolerance: | ☐ +10%/-10% ☐ +20%/-15% ☐ +25%/-15% ☑ None |
| Supply Connection – Type | □ pluggable equipment type A - □ non-detachable supply cord □ appliance coupler □ direct plug-in □ mating connector □ pluggable equipment type B - □ non-detachable supply cord □ appliance coupler □ permanent connection □ mating connector ⊠ other: Type C port |
| Considered current rating of protective device as part of building or equipment installation: | N/A (Not directly connected to mains) Installation location: ☐ building; ☐ equipment |
| Equipment mobility | |
| Over voltage category (OVC): | □ OVC I □ OVC III □ OVC IV ☑ other: (Not directly connected to mains) |
| Class of equipment | ☐ Class II ☐ Class III |
| Access location: | ☐ restricted access location ☐ N/A |
| Pollution degree (PD): | □ PD 1 □ PD 3 |
| Manufacturer's specified maxium operating ambient: | <u>40</u> °C |
| IP protection class: | |
| Power Systems: | ☐ TN ☐ TT ☐ IT - <u>230</u> V _{L-L} |
| Altitude during operation (m): | ☑ 2000 m or less ☐ <u>5000</u> m |
| Altitude of test laboratory (m) | ☐ 2000 m or less |
| Mass of equipment (kg): | ⊠ approx. 0.154kg |

| POSSIBLE TEST CASE VERDICTS: | |
|------------------------------------------------|--------------------------|
| - test case does not apply to the test object: | N/A |
| - test object does meet the requirement: | P (Pass) |
| - test object does not meet the requirement | F (Fail) |
| TESTING: | |
| Date of receipt of test item: | 2021-01-08 |
| Date (s) of performance of tests | 2021-01-08 to 2021-01-15 |

GENERAL PRODUCT INFORMATION:

Product Description -

- -The maximum operating temperature is 40°C.
- -A power source unit with output rating 5.0VDC, 1.0A was used during the tests.
- -The unit shall be charged by approved external approved adapter, which meet LPS requirements. And the external power adapter rated parameter is "input: 100-240V~, 50/60Hz, 0.15A. Output: 5.0Vdc 1000mA 5.0W"
- -Information of battery pack:
 - Highest specified charging temperature: 60°C
 - Lowest specified charging temperature: 0°C
 - Maximum specified charging current: 2.1A
 - Maximum specified charging voltage: 4.2VDC
- All the test data in this report is refer to the test data in initial report (STS201125003001E). This report changes the applicant, manufacturer, model and trademark, no additional test was conducted.

Model Differences - Designation model is different only.

- N/A

Additional application considerations – (Considerations used to test a component or sub-assembly) –

N/A

Copy of marking plate:

Remark:

- -The above markings are the minimum requirements required by the safety standard. For the final production samples, the additional markings which do not give rise to misunderstanding may be added.
- -The CE marking and WEEE symbol (if any) should be at least 5.0 mm and 7.0 mm respectively in height.
- -The manufacturer and importer detail information are showed in instructions.

ENERGY SOURCE IDENTIFICATION AND CLASSIFICATION TABLE:

(Note 1: Identify the following six (6) energy source forms based on the origin of the energy.)

(Note 2: The identified classification e.g., ES2, TS1, should be with respect to its ability to cause pain or injury on the body or its ability to ignite a combustible material. Any energy source can be declared Class 3 as a worse case classification e.g. PS3, ES3.

Electrically-caused injury (Clause 5):

(Note: Identify type of source, list sub-assembly or circuit designation and corresponding energy source

classification)

Example: +5 V dc input ES1

| Source of electrical energy | Corresponding classification (ES) |
|-----------------------------|-----------------------------------|
| Internal circuits | ES1 |
| Type C port | ES1 |

Electrically-caused fire (Clause 6):

(Note: List sub-assembly or circuit designation and corresponding energy source classification)

Example: Battery pack (maximum 85 watts): PS2

| Source of power or PIS | Corresponding classification (PS) | | |
|--------------------------|-----------------------------------|--|--|
| Internal circuits | PS1(Resistive PIS) | | |
| Battery pack/cell output | PS2(Resistive PIS) | | |

Injury caused by hazardous substances (Clause 7)

(Note: Specify hazardous chemicals, whether produces ozone or other chemical construction not addressed as part of the component evaluation.)

Example: Liquid in filled component Glycol

| Source of hazardous substances | Corresponding chemical |
|--------------------------------|------------------------|
| Battery | Complied with annex M |

Mechanically-caused injury (Clause 8)

(Note: List moving part(s), fan, special installations, etc. & corresponding MS classification based on Table 35.) Example: Wall mount unit MS2

| Source of kinetic/mechanical energy | Corresponding classification (MS) | | | |
|---------------------------------------------|-----------------------------------|--|--|--|
| Sharp edges and corners of accessible parts | MS1 | | | |
| Product mass | MS1 | | | |

Thermal burn injury (Clause 9)

(Note: Identify the surface or support, and corresponding energy source classification based on type of part, location, operating temperature and contact time in Table 38.)

Example: Hand-held scanner – thermoplastic enclosure TS1

| Source of thermal energy | Corresponding classification (TS) | | |
|--------------------------|-----------------------------------|--|--|
| Accessible parts | TS1 | | |

Radiation (Clause 10)

(Note: List the types of radiation present in the product and the corresponding energy source classification.) Example: DVD – Class 1 Laser Product RS1

| Type of radiation | | | Corresponding classification (RS) | | | | |
|-------------------|---|----------|-----------------------------------|--|---|-----|--|
| LED | 4 | * | RS1 | | 4 | 1.0 | |
| Acoustic | * | 31 | RS2 | | | 4 | |

| | ENERGY SOURCE DIAGRAM | | | | | |

| ¢ T | EN 62368-1 | 7 | |
| Clause | Requirement + Test | Result - Remark | Verdict |
| 10.5.1 | Add the following after the first paragraph: | | N/A |
| 4 | For RS 1 compliance is checked by measurement under the following conditions: | | A.C. |
| | In addition to the normal operating conditions, all controls adjustable from the outside by hand, by any object such as a tool or a coin, and those internal adjustments or presets which are not locked in a reliable manner, are adjusted so as to give maximum radiation whilst maintaining an intelligible picture for 1 h, at the end of which the measurement is made. | et wiet wet | and the second |
| 京 | NOTE Z1 Soldered joints and paint lockings are examples of adequate locking. The dose-rate is determined by means of a radiation monitor with an effective area of 10 cm², at any point 10 cm from the outer surface of the apparatus. | Will Will Will | |
| A. C. | Moreover, the measurement shall be made under fault conditions causing an increase of the high-voltage, provided an intelligible picture is maintained for 1 h, at the end of which the measurement is made. | Will will will | |
| | For RS1, the dose-rate shall not exceed 1 µSv/h taking account of the background level. NOTE Z2 These values appear in Directive | at the said | 4 |
| 10.6.1 | 96/29/Euratom of 13 May 1996. Add the following paragraph to the end of the | | N/A |
| <u> </u> | subclause: EN 71-1:2011, 4.20 and the related tests methods and measurement distances apply. | | |
| 10.Z1 | Add the following new subclause after 10.6.5. 10.Z1 Non-ionizing radiation from radio | * | N/A |
| A. C. | frequencies in the range 0 to 300 GHz The amount of non-ionizing radiation is regulated by European Council Recommendation 1999/519/EC of 12 July 1999 on the limitation of exposure of the general public to electromagnetic fields (0 Hz to 300 GHz). | t still t | CET . |
| A TELL | For intentional radiators, ICNIRP guidelines should be taken into account for Limiting Exposure to Time-Varying Electric, Magnetic, and Electromagnetic Fields (up to 300 GHz). For hand- held and body-mounted devices, attention is drawn to EN 50360 and EN 50566 | | et si |
| G.7.1 | Add the following note: | 7 | N/A |
| 5 | NOTE Z1 The harmonized code designations corresponding to the IEC cord types are given in Annex ZD. | THE THE A | ACT & |

| 10.5.2 | Germany The following requirement applies: | at with | N/A |
| - Antib | For the operation of any cathode ray tube intended for the display of visual images operating at an acceleration voltage exceeding 40 kV, authorization is required, or application of type approval (Bauartzulassung) and marking. Justification: German ministerial decree against ionizing radiation (Röntgenverordnung), in force since 2002-07-01, implementing the European Directive 96/29/EURATOM. | t with with | |

| Clause | Requirement + Test | Result - Remark | Verdict |

| 6.2.3.1 | Table: Determination of Potential Ignition Sources (Arcing PIS) | | | | | |
|---------|-----------------------------------------------------------------|----------------------|----------------|------------------------|-------------|--|
| | | Open circuit voltage | Measured r.m.s | | | |
| | | After 3 s | current | Calculated value | Arcing PIS? | |
| | Location | (Vp) | (Irms) | $(V_p \times I_{rms})$ | Yes / No | |
| | A- & | <u> </u> | | c+ | 4- | |

Supplementary information:

An Arcing PIS requires a minimum of 50 V (peak) a.c. or d.c. An Arcing PIS is established when the product of the open circuit voltage (V_p) and normal operating condition rms current (I_{rms}) is greater than 15.

| 6.2.3.2 | Table: Determination of Potential Ignition Sources (Resistive PIS) | | | | | | |
|-------------|--------------------------------------------------------------------|------------------------------------------------------------|------------------------------------------------------------|-----------------------------------------------------|--------------------------------------------------------------------|-----------------------------|--|
| Circuit Loc | cation (x-y) | Operating Condition (Normal / Describe Single Fault) | Measured wattage or VA During first 30 s (W / VA) | Measured wattage or VA After 30 s (W / VA) | Protective Circuit, Regulator, or PTC Operated? Yes / No (Comment) | Resistive PIS? Yes/No | |
| | | | <100 | >15 | 10 | 7 | |

Supplementary Information:

All internal circuits were considered as resistive PIS.

A combination of voltmeter, VA and ammeter IA may be used instead of a wattmeter.

If a separate voltmeter and ammeter are used, the product of (VA x IA) is used to determine Resistive PIS classification.

A Resistive PIS: (a) dissipates more than 15 W, measured after 30 s of normal operation, <u>or</u> (b) under single fault conditions has either a power exceeding 100 W measured immediately after the introduction of the fault if electronic circuits, regulators or PTC devices are used, or has an available power exceeding 15 W measured 30 s after introduction of the fault.
