### Reminder

When use the humidifier for the first time, put the absorbent cotton stick into appropriate amount of water, make sure it is fully covered with water. After it's completely soaked, it'll give the best performance.

### Performance and Feature

MHZ atomization chip, generates pure water mist without white powder phenomenon. Atomizing piece by special treatment, corrosion resistance, acid-proof, alkali resistance, suitable for all kinds of PH water. Gently touch the switch key can immediately acquire delightfully fresh air and moisten the space that you wish. Color changing LED lights that will bright up your environment and create a pleasant atmosphere.

### How to Operate

One hand to hold the humidifier's water tank of bottom piece, another hand holds the humidifier lid and rotate clockwise to take off the lid. Put the spring into the fuselage bottom first, and then insert the absorbent cotton stick into the fuselage, pick up the humidifier lid and aligned the lid with the center position of the exposed portion of absorbent cotton stick, aim at the center position and close the lid anti-clockwise, when you hear a click sound, the humidifier is ready. Connect the USB cable with the humidifier at one end, and the other end to a direct USB port of a computer or a mobile phone charger (the device must be switched on). The humidifier will enter standby status.

Fill in the water container with appropriate amount of water, twist the humidifier's lid back on with the water container, then gently touch the 'start' button, the humidifier gets into working status. It will start generating mist and LED light will be ON with changing color, keep touching the button to fix the color of the LED light on a particular color with mist ON. In sequence as Red, Green, Blue, Light's OFF. Touch the button 6" time, to turn the mist OFF as well.

When the humidifier is just unboxed, or being kept unused for a long time, it may have around 3 minutes with no mist coming out when being turned ON, this is NOT a problem, this is because the absorbent cotton stick is absorbing the water, when the absorbent cotton stick is fully soaked, it will start generating mist. You may also soak the absorbent cotton stick in the water for 30 seconds before inserting it back into the humidifier, it will help the humidifier to begin generating mist faster.

### Caution

This humidifier uses the power supply voltage is DC 5V, please make sure to use the correct power adapter with the humidifier. The humidifier shall be kept in a safe place, out of the reach from children. Please fill with fresh water in order to ensure that the mist being generated is clean, do NOT use hot water. Please do NOT use sharp or hard object to touch the atomization chip to avoid damage to the surface of the atomization chip. To clean the top of the atomization chip, use a piece of soft cloth with a little water to gently wipe it. The humidifier will soon resume working.

If the humidifier is NOT being used for a while, please disconnect the power. If the humidifier is NOT in use for a long time (longer than 3 days), please pull out the power cable, take out the water container from the humidifier and wipe it thoroughly, then store it in a proper place. Wipe the humidifier clean with a piece of soft cloth, don't leak any water into the humidifier lid, it's forbidden to immerse the whole humidifier with any liquid. Do NOT use gasoline, alcohol or any other organic solvents.

If the power cable is damaged or under any exceptional circumstances, it should be sent to repair by professionals and absolutely not by yourself. Cleaning atomization chip regularly and change the absorbent cotton stick, is recommended to prolong the service life of the product. Please avoid turning on the humidifier without any water in the container, otherwise it may affect the performance of the humidifier or even damage it. This product is to be used manually. You may add 1 or 2 drops of aroma essential oil, after the humidifier starts generating mist.

### Unusual conditions

If the humidifier lid is accidentally dropped into the water, please follow the following steps: Turn off the power, pull out the power cable. Unscrew the humidifier lid and take out the absorbent cotton stick. Gently shaking the humidifier lid and empty the internal water as soon as possible, place it in a safe place and let it naturally air dry for 24 hours.

### Causes of breakdown

When break down occurs, please check the followings:

After switched on, if the humidifier does not work	Whether the power adapter and the humidifier are connected properly, confirm that the product has been connected with the adapter.  Whether the power adapter is matched, confirm the power adapter specification. Confirm whether the container filled with water or the water is properly to expose the absorbent cotton stick, if the water is having shortage, please add appropriate amount of water into the container.
The humidifier does not spray or spray normally	When atomization chip is contaminated, please clean the atomization chip.  When absorbent cotton stick contaminated or aging seriously, please change the absorbent cotton stick and clean the water hole.
