## GENERAL INFORMATION

### Product Description for Equipment under Test (EUT)

<b>EUT Name:</b>	Motion Lamp/Glitter Lamp
<b>EUT Model:</b>	1606
<b>Multiple Models:</b>	1608,1308,1306
<b>Rated Input Voltage:</b>	240V/50Hz
<b>The Highest Operating Frequency:</b>	N/A
<b>External Dimension:</b>	100mm(L)*100mm(w)*420mm(H)
<b>Serial Number:</b>	190404005
<b>EUT Received Date:</b>	2019.04.11

*Note: The series product, models 1606, 1608, 1308, 1306 are electrically identical, we selected 1606 for fully testing .The difference between them was explained in the declaration letter.*

### Objective

This report is prepared on behalf of *DongGuan City TianHua Photoelectric Technology Co., Ltd.* in accordance with EN 55015:2013+A1:2015 Limits and methods of measurement of radio disturbance characteristics of electrical lighting and similar equipment; EN 61547:2009 Equipment for general lighting purposes – EMC immunity requirements; EN 61000-3-2:2014 Electromagnetic compatibility (EMC) – Part 3-2: Limits – Limits for harmonic current emissions (equipment input current  $\leq$  16 A per phase); EN 61000-3-3:2013 Electromagnetic compatibility (EMC)Part 3-3: Limits – Limitation of voltage changes, voltage fluctuations and flicker in public low-voltage supply systems, for equipment with rated current  $\leq$  16 A per phase and not subject to conditional connection.

The objective is to determine the compliance of EUT with:  
EN 55015:2013+A1:2015  
EN 61547:2009  
EN 61000-3-2:2014  
EN 61000-3-3:2013.

### Test Methodology

All measurements contained in this report were conducted with EN 55015:2013+A1:2015 Limits and methods of measurement of radio disturbance characteristics of electrical lighting and similar equipment; EN 61547:2009 Equipment for general lighting purposes – EMC immunity requirements; EN 61000-3-2:2014 Electromagnetic compatibility (EMC) – Part 3-2: Limits – Limits for harmonic current emissions (equipment input current  $\leq$  16 A per phase); EN 61000-3-3:2013 Electromagnetic compatibility (EMC)Part 3-3: Limits – Limitation of voltage changes, voltage fluctuations and flicker in public low-voltage supply systems, for equipment with rated current  $\leq$  16 A per phase and not subject to conditional connection.

## SYSTEM TEST CONFIGURATION

### Description of Test Configuration

The system was configured for testing in a typical fashion (as normally used by a typical user).

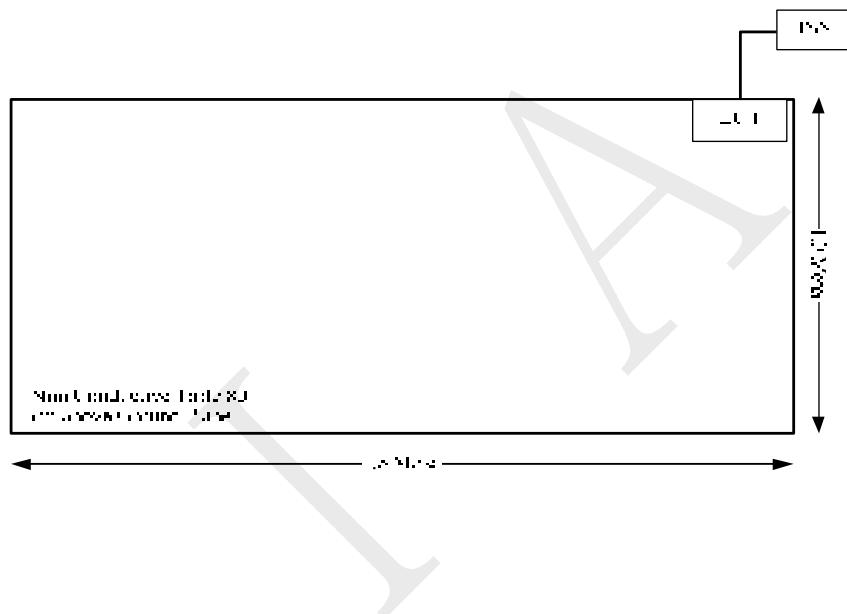

### Equipment Modifications

No modification was made to the EUT.

### EUT Exercise Software

No EUT software was used for testing.

### Block Diagram of Test Setup

**Test Equipment List**

\* Statement of Traceability: Bay Area Compliance Laboratories Corp. (Dongguan) attests that all calibrations have been performed, traceable to National Primary Standards and International System of Units (SI).

## Environmental Conditions

<b>Temperature:</b>	23.5~28.8°C
<b>Relative Humidity:</b>	46-66%*
<b>ATM Pressure:</b>	100.2~ 100.6 kPa
<b>Tester:</b>	Sunny Cen, Lily Xie, Sky Lu, Lucy Lu
<b>Test Date:</b>	2019.4.12~2019.4.18

Note:

\*The relative humidity of ESD test environment is 54%.

**SUMMARY OF TEST RESULTS**

SN	Rule and Clause	Description of Test	Test Result
1	EN 55015 Clause 4.3.1	Conducted emissions	Compliance
2	EN 55015 Clause 4.4.1	Radiated electromagnetic disturbances 9 kHz to 30 MHz	Compliance
3	EN 55015 Clause 4.4.2	Radiated electromagnetic disturbances 30 MHz to 300 MHz	Compliance
4	EN 61547 Clause 5.2	Electrostatic discharges IEC 61000-4-2	Compliance
5	EN 61547 Clause 5.3	Radio-frequency electromagnetic fields IEC 61000-4-3	Compliance
6	EN 61547 Clause 5.4	Power frequency magnetic fields IEC 61000-4-8	Not applicable*
7	EN 61547 Clause 5.5	Fast transients IEC 61000-4-4	Compliance
8	EN 61547 Clause 5.6	Injected currents (radio-frequency common mode) IEC 61000-4-6	Compliance
9	EN 61547 Clause 5.7	Surges IEC 61000-4-5	Compliance
10	EN 61547 Clause 5.8	Voltage dips and short interruptions IEC 61000-4-11	Compliance
11	EN 61000-3-2	Harmonic current emissions	Compliance
12	EN 61000-3-3	Voltage fluctuations and flicker	Compliance

Note:

Not applicable\*: EUT is not sensitive to magnetic fields.

## 1 – CONDUCTED EMISSIONS

### Measurement Uncertainty

Compliance or non-compliance with a disturbance limit shall be determined in the following manner:

If  $U_{\text{lab}}$  is less than or equal to  $U_{\text{cispr}}$  of Table 1, then:

- compliance is deemed to occur if no measured disturbance level exceeds the disturbance limit;
- non-compliance is deemed to occur if any measured disturbance level exceeds the disturbance limit.

If  $U_{\text{lab}}$  is greater than  $U_{\text{cispr}}$  of Table 1, then:

- compliance is deemed to occur if no measured disturbance level, increased by  $(U_{\text{lab}} - U_{\text{cispr}})$ , exceeds the disturbance limit;

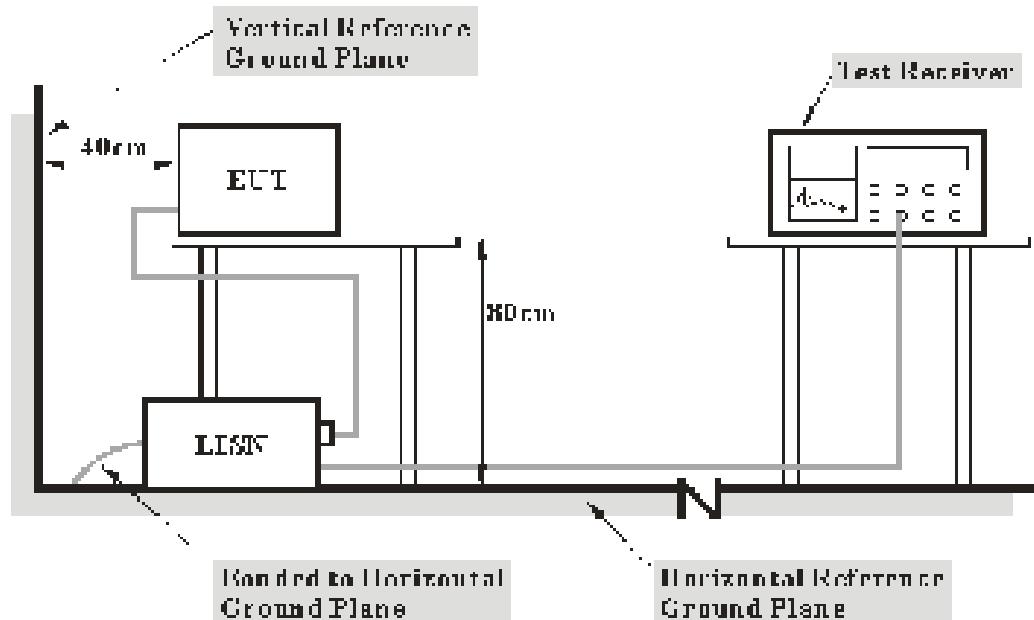

- non-compliance is deemed to occur if any measured disturbance level, increased by  $(U_{\text{lab}} - U_{\text{cispr}})$ , exceeds the disturbance limit.

Based on CISPR 16-4-2: 2011, measurement uncertainty of conducted disturbance at mains port using AMN at Bay Area Compliance Laboratories Corp. (Dongguan) is 3.12 dB (150 kHz to 30 MHz).

Table 1 – Values of  $U_{\text{cispr}}$

Measurement	$U_{\text{cispr}}$
Conducted disturbance at mains port using AMN (150 kHz to 30 MHz)	3.4 dB

### Test System Setup

Note: 1. Support units were connected to second LISN.  
 2. Both of LISNs (AMIN) 80 cm from EUT and at the least 80 cm from other units and other metal planes & support units.

The setup of EUT is according with CISPR 16-1-1:2010+A1:2010, CISPR 16-2-1:2014 measurement procedure. The specification used was the EN 55015 limits.

The external I/O cables were draped along the test table and formed a bundle 30 to 40 cm long in the middle.

The power of EUT was connected to a 240 V/50Hz AC power source.

## EMI Test Receiver Setup

The EMI Test Receiver was set to investigate the spectrum from 9 kHz to 30 MHz.

During the conducted emission test, the EMI Test Receiver was set with the following configurations:

Frequency Range	IF B/W
9 kHz – 150 kHz	200 Hz
150 kHz – 30 MHz	9 kHz

## Test Procedure

Maximizing procedure was performed on the six (6) highest emissions to ensure EUT compliance using all installation combination.

All data was recorded in the Quasi-peak and average detection mode.

## Corrected Amplitude & Margin Calculation

The basic equation is as follows:

Result (QuasiPeak or Average) = Meter Reading + Corr.

Note:

Corr. = Cable loss + Factor of coupling device

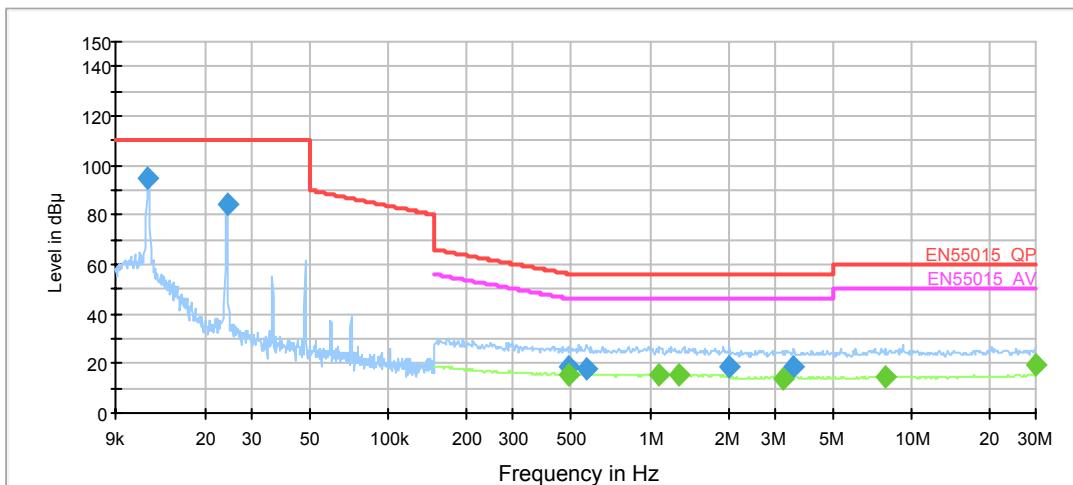

The “Margin” column of the following data tables indicates the degree of compliance within the applicable limit. For example, a margin of 7dB means the emission is 7dB below the maximum limit. The equation for margin calculation is as follows:

Margin = Limit – Result

## Test Data

Please refer to following table and plots:

Model Number: 1606  
 Port: L  
 Test Mode: On  
 Power Source: AC 240V/50Hz  
 Note:

### 3 – RADIATED ELECTROMAGNETIC DISTURBANCES 30 MHZ TO 300 MHZ

#### Measurement Uncertainty

Compliance or non- compliance with a disturbance limit shall be determined in the following manner:

If  $U_{\text{lab}}$  is less than or equal to  $U_{\text{cispr}}$  of Table 1, then:

- compliance is deemed to occur if no measured disturbance level exceeds the disturbance limit;
- non - compliance is deemed to occur if any measured disturbance level exceeds the disturbance limit.

If  $U_{\text{lab}}$  is greater than  $U_{\text{cispr}}$  of Table 1, then:

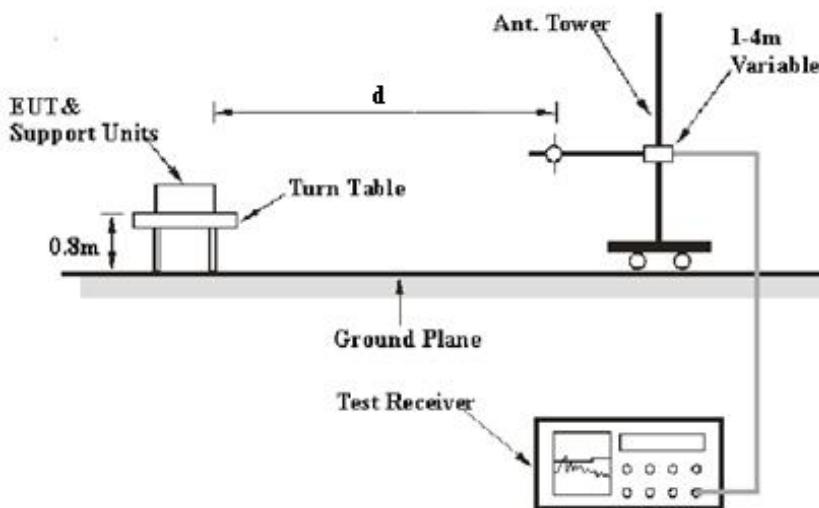

- compliance is deemed to occur if no measured disturbance level, increased by  $(U_{\text{lab}} - U_{\text{cispr}})$ , exceeds the disturbance limit;
- non - compliance is deemed to occur if any measured disturbance level, increased by  $(U_{\text{lab}} - U_{\text{cispr}})$ , exceeds the disturbance limit.

Based on CISPR 16-4-2: 2011, measurement uncertainty of radiated emission at a distance of 10m at Bay Area Compliance Laboratories Corp. (Dongguan) is:30M~200MHz: 4.55 dB for Horizontal, 4.57 dB for Vertical; 200M~1GHz: 4.66 dB for Horizontal, 4.56 dB for Vertical; measurement uncertainty of radiated emission at a distance of 3m at Bay Area Compliance Laboratories Corp. (Dongguan) is:30M~200MHz: 4.58 dB for Horizontal, 4.59 dB for Vertical; 200M~1GHz: 4.83 dB for Horizontal, 5.85 dB for Vertical; 1G~6GHz: 4.45 dB, 6G~18GHz: 5.23 dB.

Table 1 – Values of  $U_{\text{cispr}}$

Measurement	$U_{\text{cispr}}$
Radiated disturbance (electric field strength at an OATS or in a SAC) (30 MHz to 1000 MHz)	6.3 dB
Radiated disturbance (electric field strength in a FAR) (1 GHz to 6 GHz)	5.2 dB
Radiated disturbance (electric field strength in a FAR) (6 GHz to 18 GHz)	5.5 dB

#### Test System Setup

The radiated emission tests were performed in the **10** meters chamber test site, using the setup accordance with the CISPR 16-1-1:2010+A1:2010, CISPR16-2-3:2010. The specification used was EN 55015.

The external I/O cables were draped along the test table and formed a bundle 30 to 40 cm long in the middle.

The power was connected to 240 V/50Hz AC power source.

## EMI Test Receiver Setup

The system was investigated from 30 MHz to 300 MHz.

During the radiated emission test, the EMI test receiver was set with the following configurations:

Frequency Range	RBW	Video B/W	IF B/W	Detector
30MHz – 300 MHz	120 kHz	300 kHz	120kHz	QP

## Test Procedure

Maximizing procedure was performed on the highest emissions to ensure that the EUT complied with all installation combinations.

All data was recorded in the Quasi-peak detection mode.

## Corrected Amplitude & Margin Calculation

The basic equation is as follows:

Result = Meter Reading + Corrected

Note:

Corrected = Antenna Factor + Cable Loss - Amplifier Gain

or

Corrected = Antenna Factor + Cable Loss + Insertion loss of attenuator - Amplifier Gain

The “Margin” column of the following data tables indicates the degree of compliance with the applicable limit. For example, a margin of 7 dB means the emission is 7 dB below the limit. The equation for margin calculation is as follows:

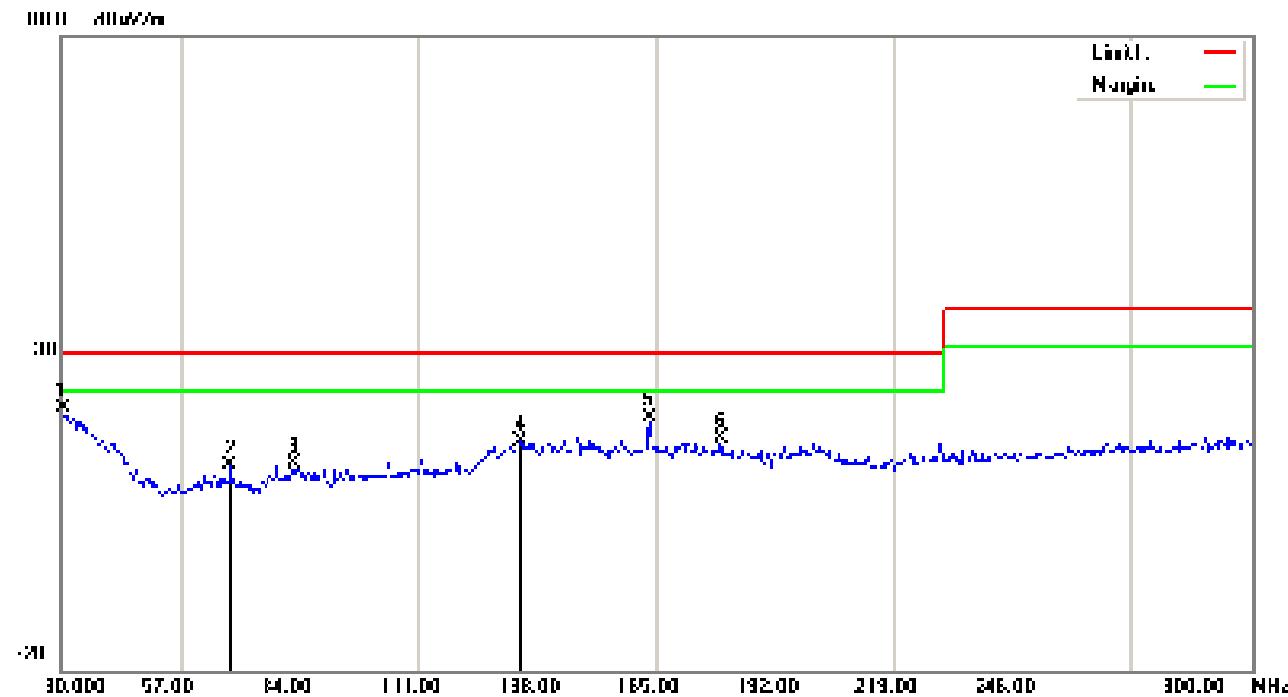

$$\text{Margin} = \text{Limit} - \text{Result}$$

## Test Data

Please refer to following table and plots:

**Condition:** EN 55015 10m Radiation  
**EUT:** Motion LampGlitter Lamp  
**Model:** 1606  
**Test Mode:** On  
**Note:**

**Polarization:** Horizontal  
**Power:** AC 240V/50Hz  
**Distance:** 10m

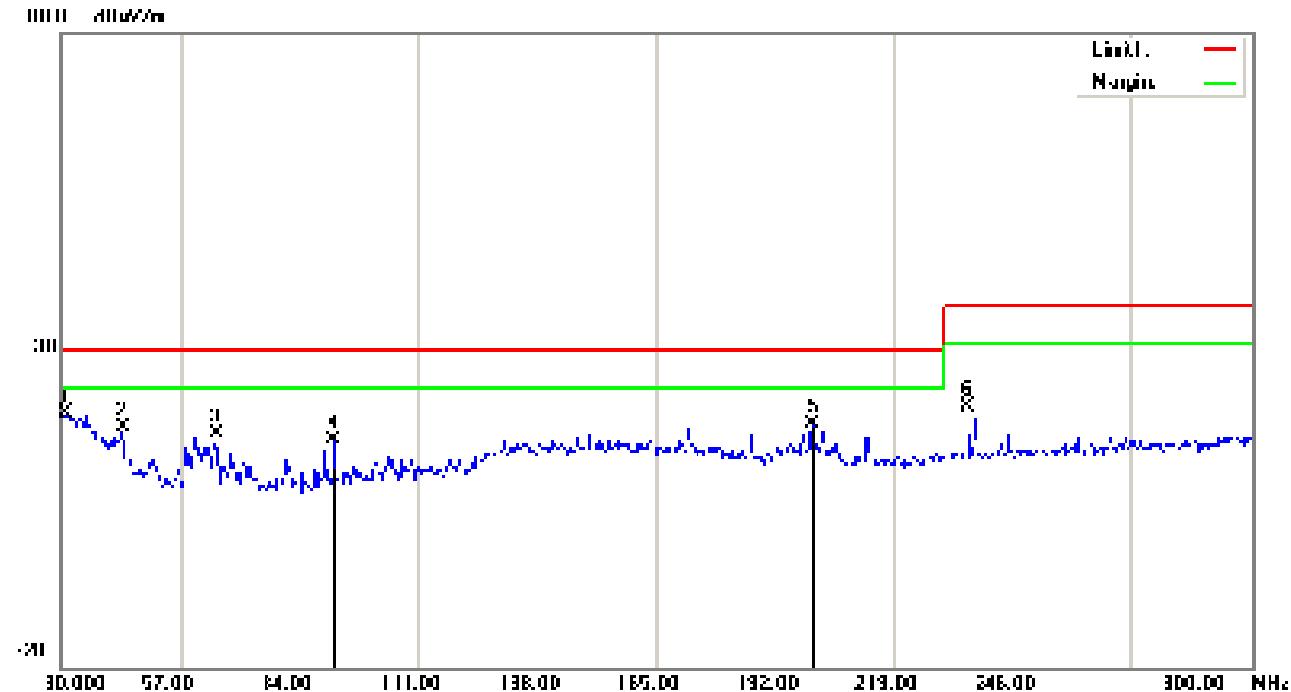

No.	Frequency (MHz)	Reading (dB $\mu$ V)	Detector	Corrected (dB/m)	Result (dB $\mu$ V/m)	Limit (dB $\mu$ V/m)	Margin (dB)
1	30.2700	29.39	peak	-8.07	21.32	30.00	8.68

Note: Since peak value is meeting the Limit requirement, so the QP value is not recorded.

## 4 – ELECTROSTATIC DISCHARGES IEC 61000-4-2

### Measurement Uncertainty

$U_{\text{lab}}$  (measurement uncertainty of lab) and  $U_{\text{EN}}$  (measurement uncertainty of EN 61000-4-2) please refer to the following:

Parameter	$U_{\text{EN}}$	$U_{\text{lab}}$
Rise time $t_r$	$\leq 15\%$	15%
Peak current $I_p$	$\leq 7\%$	6.30%
Current at 30 ns	$\leq 7\%$	6.30%
Current at 60 ns	$\leq 7\%$	6.30%

### Test System Setup

Remark: ■ is the tip of the electrode

IEC 61000-4-2 specifies that a tabletop EUT shall be placed on a non-conducting table which is 80 centimeters above a ground reference plane and that floor mounted equipment shall be placed on a insulating support approximately 10 centimeters above a ground plane. During the tests, the EUT is positioned over a ground reference plane in conformance with this requirement.

For tabletop equipment, a 1.6 by 0.8-meter metal sheet (HCP) is placed on the table and connected to the ground plane via a metal strap with two 470 k Ohms resistors in series. The EUT and attached cables are isolated from this metal sheet by 0.5-millimeter thick insulating material. A Vertical Coupling Plane (VCP) grounded on the ground plane through the same configuration as in the HCP is used.

### Test Standard

EN 61547:2009 (IEC 61000-4-2:2008)  
 Test level 3 for Air Discharges at  $\pm 8 \text{ kV}$   
 Test level 2 for Contact Discharges at  $\pm 4 \text{ kV}$

## Test Level

Level	Test Voltage Contact Discharges ( $\pm$ kV)	Test Voltage Air Discharges ( $\pm$ kV)
1.	2	2
2.	4	4
3.	6	8
4.	8	15
X.	Special	Special

## Performance criterion: B

## Test Procedure

### Air Discharges:

This test is done on a non-conductive surface. The round Discharges tip of the Discharges electrode shall be approached as fast as possible to touch the EUT. After each Discharges, the Discharges electrode shall be removed from the EUT. The generator is then re-triggered for a new single Discharges and repeated 10 times for each pre-selected test point. This procedure shall be repeated until all the air Discharges completed.

### Contact Discharges:

All the procedure shall be same as Section 8.3.1 of IEC 61000-4-2, except that the tip of the Discharges electrode shall touch the EUT before the Discharges switch is operated.

### Indirect Discharges for horizontal coupling plane

At least 20 single Discharges shall be applied to the horizontal coupling plane, at points on each side of the EUT. The Discharges electrode positions vertically at a distance of 0.1 m from the EUT and with the Discharges electrode touching the coupling plane.

### Indirect Discharges for vertical coupling plane

At least 20 single Discharges shall be applied to the center of one vertical edge of the coupling plane. The coupling plane, of dimensions 0.5m X 0.5m, is placed parallel to, and positioned at a distance of 0.1m from the EUT. Discharges shall be applied to the coupling plane, with this plane in sufficient different positions that the four faces of the EUT are completely illuminated.

## Test Data

## **5 – RADIO-FREQUENCY ELECTROMAGNETIC FIELDS IEC 61000-4-3**

### **Measurement Uncertainty**

$U_{\text{lab}}$  (measurement uncertainty of lab) and  $U_{EN}$  (measurement uncertainty of EN 61000-4-3) please refer to the following:

Parameter	$U_{EN}$	$U_{\text{lab}}$
Calibration process	1.88 dB	1.88 dB
Level setting	2.19 dB	2.19 dB

### **Test System Setup**

### **Test Standard**

EN 61547:2009 (IEC 61000-4-3:2006+A1:2008+A2:2010)  
Test level 2 at 3 V/ m (unmodulated, r.m.s.)

Level	Field Strength V/m
1.	1
2.	3
3.	10
X.	Special

Performance criterion: A

### **Test Procedure**

The EUT and its simulators are placed on a turn table which is 0.1 meter above the ground. The EUT is set 3 meters away from the transmitting antenna which is mounted on an antenna tower.

Both horizontal and vertical polarizations of the antenna are set on test. Each of the four sides of EUT must be faced this transmitting antenna and measured individually.

In order to judge the EUT performance, a CCD camera is used to monitor the EUT.

All the scanning conditions are as follows:

## Test Data

Please refer to following tables:

**Test Mode:** On

**Note:**

Condition of Test	Remarks

1	0.5 kV	0.25 kV
2	1 kV	0.5 kV
3	2 kV	1 kV
4	4 kV	2 kV
X	Special	Special

Performance criterion: B

### Test Procedure

The EUT was arranged for Power Line Coupling and for I/O Line Coupling through a capacitive clamp, where applicable. (Note: The I/O coupling test using a capacitive clamp is performed on the I/O interface cables that are longer in length than 3 meters.) A metal ground plane 2.4 meter by 2.0 meter was placed between the floor and the table and is connected to the earth by a 2.0 meter ground rod. The ground rod is connected to the test facility's electrical earth.

## Test Data

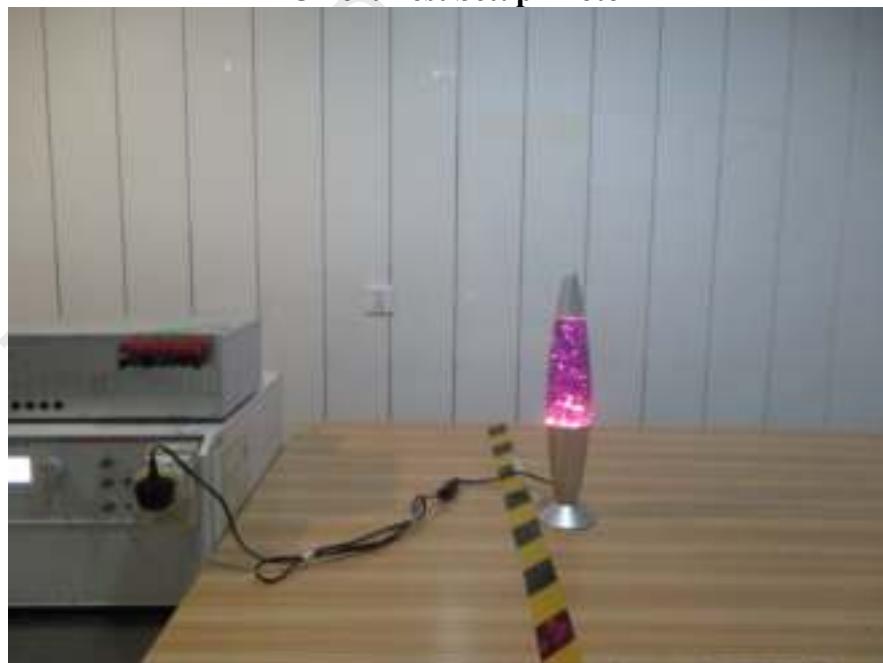

*Please refer to following tables:*

**Test Mode:** On

**Note:**

Test Points		Test Levels (kV)

## **8 – INJECTED CURRENTS (RADIO-FREQUENCY COMMON MODE) IEC 61000-4-6**

### **Measurement Uncertainty**

$U_{\text{lab}}$  (measurement uncertainty of lab) and  $U_{\text{EN}}$  (measurement uncertainty of EN 61000-4-6) please refer to the following:

Parameter	$U_{\text{EN}}$	$U_{\text{lab}}$
CDN calibration process	1.27 dB	1.27 dB
CDN test process	1.36 dB	1.36 dB

### **Test setup**

### **Test Standard**

EN 61547: 2009 (IEC 61000-4-6:2009)

Test Level 2 at 3 V r.m.s. (unmodulated), 0.15 MHz ~ 80 MHz

Level	Voltage Level (r.m.s.) V
1	1
2	3
3	10
X	Special

Performance criterion: A

### **Test Procedure**

- 1) Let the EUT work in test mode and test it.
- 2) The EUT are placed on an insulating support 0.1 m high above a ground reference plane. CDN (coupling and decoupling device) is placed on the ground plane about 0.3 m from EUT. Cables between CDN and EUT are as short as possible, and their height above the ground reference plane shall be between 30 and 50 mm (where possible).
- 3) The disturbance signal described below is injected to EUT through CDN.
- 4) The EUT operates within its operational mode(s) under intended climatic conditions after power on.
- 5) The frequency range is swept from 150 kHz to 80 MHz using 3V signal level, and with the disturbance signal 80% amplitude modulated with a 1 kHz sine wave.
- 6) Where the frequency is swept incrementally, the step size shall not exceed 1 % of the preceding frequency value. The dwell time of the amplitude modulated carrier at each frequency shall not be less than the time necessary for the EUT to be exercised and to respond, but shall in no case be less than 0.5 s.
- 7) Recording the EUT operating situation during compliance testing and decide the EUT immunity criterion.

## Test Data

Please refer to following tables:

**Test Mode:** On

**Note:**

**Table 1: AC mains power input port**

Frequency range: 150 kHz to 80 MHz

## **12 – VOLTAGE FLUCTUATIONS AND FLICKER**

### **Test System Setup**

### **Test Standard**

EN 61000-3-3:2013

#### **Flicker Test Limits :**

The limits shall be applicable to voltage fluctuations and flicker at the supply terminals of the equipment under test, measured or calculated according to clause 4 under test conditions described in clause 6 and annex A. Tests made to prove compliance with the limits are considered to be type tests.

The following limits apply:

- the value of  $P_{st}$  shall not be greater than 1,0;
  - the value of  $P_{lt}$  shall not be greater than 0,65;
  - the value of  $d(t)$  during a voltage change shall not exceed 3,3 % for more than 500 ms;
  - the relative steady-state voltage change,  $dc$ , shall not exceed 3,3 %;
  - the maximum relative voltage change  $d_{max}$ , shall not exceed
- a) 4 % without additional conditions;  
 b) 6 % for equipment which is:

- switched manually, or
  - switched automatically more frequently than twice per day, and also has either a delayed restart (the delay being not less than a few tens of seconds), or manual restart, after a power supply interruption.

Note: The cycling frequency will be further limited by the  $P_{st}$  and  $P_{lt}$  limit. For example: a  $d_{max}$  of 6 % producing a rectangular voltage change characteristic twice per hour will give a  $P_{lt}$  of about 0,65.

- c) 7 % for equipment which is
- attended whilst in use (for example: hair dryers, vacuum cleaners, kitchen equipment such as mixers, garden equipment such as lawn mowers, portable tools such as electric drills), or
  - switched on automatically, or is intended to be switched on manually, no more than twice per day, and also has either a delayed restart (the delay being not less than a few tens of seconds) or manual restart, after a power supply interruption.

In the case of equipment having several separately controlled circuits in accordance with 6.6, limits b) and c) shall apply only if there is delayed or manual restart after a power supply interruption; for all equipment with automatic switching which is energized immediately on restoration of supply after a power supply interruption, limits a) shall apply; for all equipment with manual switching, limits b) or c) shall apply depending on the rate of switching.  $P_{st}$  and  $P_{lt}$  requirements shall not be applied to voltage changes caused by manual switching. The limits shall not be applied to voltage changes associated with emergency switching or emergency interruptions.

**Test Data**

Please refer to following tables:

Short time (Pst): 10 min  
Observation time: 10 min (1 Flicker measurement)  
Test Mode: On  
Power Source: AC 240V/50Hz  
Test Result PASS

**Maximum Flicker results**

	<b>EUT values</b>	<b>Limit</b>	<b>Result</b>
Pst	0.178	1.00	PASS
Plt	0.178	0.65	PASS
dc [%]	0.005	3.30	PASS
dmax [%]	0.146	4.00	PASS
dt [s]	0.000	0.50	PASS

**EXHIBIT C – DECLARATION LETTER**

DongGuan City TianHua Photoelectric Technology Co., Ltd.

**Declaration of Alteration**

To Whom It May Concern,

We, DongGuan City TianHua Photoelectric Technology Co., Ltd., hereby declare that the products of these models are the same except the power, size and color, the details are as below:

Products Description	Name	Motion Lamp/Glitter Lamp		
	Brand			
	Project No.	RDG190404005		
Differences Description				
Model No.	Power	Size	Color	
1606	25W	16"	Red or purple	
1608	25W	16"	Blue or green	
1306	20W	13"	Red or purple	
1308	20W	13"	Blue or green	

Besides the differences in the table above, we declare the products are identical. We guarantee all the information provided above is true, and notice that we'll bear all the consequences caused by any false information or concealing.

Best Regards,
