

LumiMe

Løvtre.

Wooden Booklamp

Quickstart Guide

The Book of Light

When closed, Løvtre disguises itself as an elegant book bound in a laser-cut wooden cover. When opened, it magically transforms into a sculptural lamp illuminated by a 3-level color adjustable LED light. LumiMe® was born out of the fascination of the functional potential together with design and the desire to create a flexible lighting solution that adapts to its environment.

Instructions

When you open Løvtre, you'll have nostalgia for the pop-up books of yesteryear. Constructed of DuPont Tyvek paper, the Løvtre opens to show "pages", lit from the inside. Upon first opening, it's almost magical.

Light colors

If you close the book and reopen it, it switches to the next light temperature. In total there are 3 white colors:

Creative with Løvtre

Løvtre is super low weight, so it's portable and can be used just about anywhere. Due to its unique book-like design, Løvtre is configurable in 4 different ways and can be adapted to your lighting needs as they change throughout the day:

- Flat on the table for ambient lighting.
- Opened 360 degrees for a greater degree of light.
- Open only slightly when sitting upright for directional, passive lighting useful for reading or writing
- Combine multiple books for custom lighting solutions.

Recharge & light up

Løvtre high-output LED lights produce 500 lumens at a warm 2700K, 3500K or 6000K color temperature. The built-in battery can be re-charged through the micro USB power connector located on the bottom, discreetly near the book's spine. An 2500mAh lithium-ion battery pack is integrated into Løvtre. The result is a lamp that's every bibliophile's delight with an 7 hour battery life depending on the light temperature you use.

Charging methods and indicator lights.

Charge Løvtre for 4 hours to get fully charged. Even though the Løvtre has an automatic shutdown to block overcharging, please never charge Løvtre more than 6 hours. This could damage the internal electronics.

The indicator light has a low power indicator and charging indicator. When the battery is low on power, a red indicator LED will light up. When the battery is fully charged, the indicator LED will light up blue.

Discover the unexpected

Løvtre comes with a leather strap that allows it to be hung, as well as magnetic wooden pegs for mounting. The magnets inside its covers make it possible to attach Løvtre to just about every surface. Løvtre gives you the freedom to use it in unexpected ways.

Each booklamp is a module that can be arranged as part of a larger lighting configuration. You can come up with your own sculptural installation. Life is full of unexpected moments. Whether you're throwing an impromptu backyard party or reading a bedtime story to your kids.

Share your moments on social media with our community!

Product specifications

Modelnumber: H05
Materials: Wood, ABS, DuPont Tyvek paper
Battery: 2500mAh polymer lithium-ion battery
Power: 3.7V
Battery life: 7 hours (depending on light color)
Charging time: 4 hours
Cover magnet: Neodymium magnets

Safety & Environment

LumiMe Løvtre is in compliance with the essential requirements and other relevant provisions of the Directives 2014/53/EU, 2011/65/EU and 2006/66/EC.

Do not dispose of electrical appliances as unsorted municipal waste, use separate collection facilities. Contact your local government for information regarding the available collection systems. If electrical appliances are disposed of in landfills or dumps, hazardous substances can leak into the groundwater and get into the food chain, damaging your health and wellbeing.

- Though the DuPont Tyvek paper is waterresistant, due to its structure, there are still openings in the bending position. In order to avoid danger of short circuit, please be careful to not let water flow into the interior.
- Please avoid damage caused by falling, tossing and strong impact.
- Do not try to dismantle the product by yourself. Maintenance should be carried out by LumiMe® or its authorized vendors only.
- To power the device, use a certified USB wall adapter with an output voltage of less than 5V +/- 0.5V and an output current of between 1A - 2A.
