

# INSTALLATION STEPS

**01**

Turn off the power, open the cover of car engine

**02**

Open original dust cover, move out original halogen bulb

**03**

Move out the chuck of the led headlight

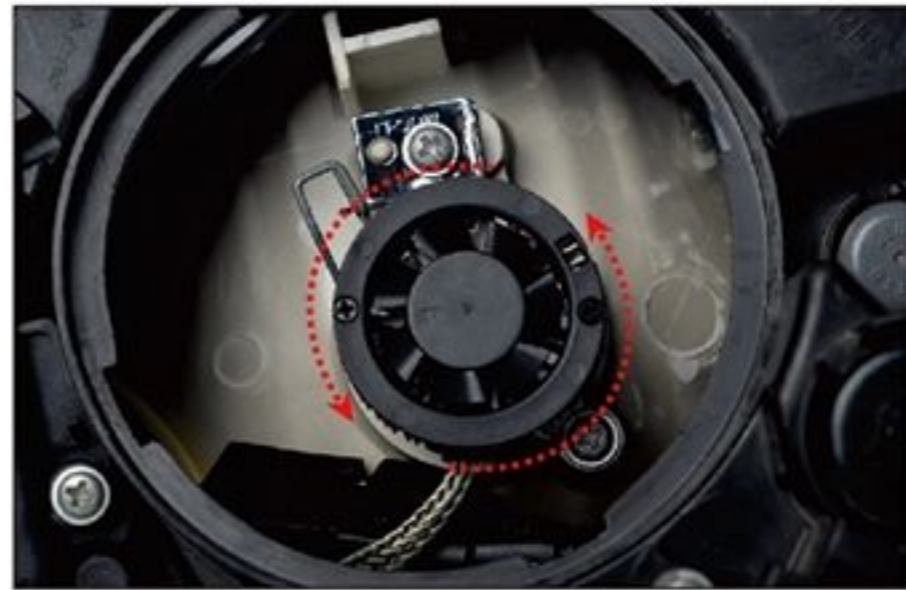

**04**

Then fix the chuck of the led headlight

**05**

Then, connect the lamp power cord and put the car headlight into the chuck.

**06**

When finish the installation, connect the power and test the light, adjust the light to be best beam pattern (Adjustable left and right)

**07**

After connecting the power and finish the testing, put the drive and line into the assembly.

**08**

After getting the led headlight installed and tested well, cover back original dust cover (If the assembly space is too small to cover the original dust cover for some special car, we need buy professional modified dust cover), finish the installation.
