8. HDMI Port

This manual explains how to safely operate the Ego Sports Camera. Please read these instructions carefully before using the camera

Liquid Image will update the software regularly, please refer to the information on our website and download the newest software.

- Please note before use
 1. Check if the Micro SD card of this equipment was installed properly.
- 2. Check if the memory card has enough free space.

 3. The lithium battery must be fully charged before the first use. You can either use the supplied USB cable and charge it with your computer, or use a wall charger (sold separately)

 4. A Liquid Image charging cable must be used to avoid damage to the camera.

Shutter (Shutter / Select / Wifi Start & Shutdown button)

Mode button (Power / Mode button)

Turn on/off:

 \oplus

The Camera will not function without a Micro SDHC card up to 32GB with a class 6 or higher rating. Insert Micro SDHC card. Turn on the camera by pressing the Mode button. The Camera will turn on in the 720p@60fps Mode (Blue LED). The Wiff signal icon will begin flashing once the Wiff module is available in about 8 seconds. To turn on the Wiff connection, press and hold the Shutter button down for 3 seconds or until the Wiff icon becomes solid (see Wiff setting section of user manual). To turn off the camera, press and hold the Mode button for three seconds.

If the camera remains in standby mode for three minutes, it will automatically

power on. Note: If the WIFI function is on, the function of auto shut down will be inactive.

Firmware Upgrade Procedure:

Copy the firmware file to the root directory of the SD card, outside of the main directory folders. Then, disconnect the USB cable and the camera will automatically shut down. Now, with the camera off, press and hold both the on/off button and the shutter button. Once you hear the camera beep, release

both buttons at the same time.

Clease note that LCD will show UP during the camera will shut down automatically.)

SOS message
When the camera shows SOS, it means the current recording document is damaged; the user can press any key to repair this document.

When the LCD display shows HOT, it means the temperature of the camera is too high and needs to shut down for cooling. It won't damage the camera and is only for reminding the user that the temperature of the equipment cannot be too high. The user only needs to reboot the camera after it cools down.

Mode Setting

Ë	WIFI	wireless WIFI signal icon
984	Battery	shows the battery level
	Photo Mode	Photo mode 🔲 or
		Continuous photo mode 📮
	SD card	Icon flashes continuously when
		no SD card is recognized
720	720 mode	720p@60 Frames per second mode
1080	1080 mode	1080p@30 frames per second mode

When the camera is turned on, the default mode is 720p@60 frames per second. This will be indicated by the LED showing solid blue. To switch between the different modes of the camera, briefly press the mode button.

Pressing the Power / Mode button cycles through the modes in the following order: 720P 60, 1080P 30, Photo, and Continuous Photo. Pressing the SHUTTER and mode buttons at the same time in the 720P/1080P mode will switch to the PAL / NTSC standard. Press the mode button to switch, and press the SHUTTER button to save and exit.

720P@60fps recording mode – **Blue LED**Press the SHUTTER button once in the preview mode and the camera will start recording. During the recording process, the blue LED light will flash. Press again to stop recording and the blue LED light will stay solid.

In the 720P 60 mode, press the Mode button briefly to switch to the 1080P 30 mode. In the preview mode, press the SHUTTER button once and the camera will start recording. During the recording process, the green LED light will flash. Press again to stop recording and the green LED light will stay solid.

Photo mode – red LED In the 1080P 30 mode, press the mode button briefly to switch to the Photo mode, and the red LED light will be solid.

With the camera in standby mode, if you wish to take a single photo, press the shutter button briefly. You will hear a beep and see the red LED flash once, which indicates that a single photo has been taken.

Continuous Photo mode – purple LED
In the photo mode, press the mode button briefly to switch to the Continuous Photo mode, and the purple LED light will be solid.

With the camera in standby mode (indicated by a solid purple LED) press the shutter button briefly to activate the continuous shooting mode. You will hear a beep and see the LED flash every time a photo is recorded. To stop the continuous shot mode, press the shutter button again briefly, and the LED will return to a solid state.

When the memory card is full, the LCD display will show FUL. If you wish to format the memory card, please use the following operation: Insert the memory card into the camera and hold the shutter button. Then, press the Mode button continuously four times in a row. The LCD will then show FAT on the screen which indicates that the MicroSD card is being

If a Micro SD card is not inserted, and the camera is powered on, the SD card icon on the right side will flash, as shown in P-01 below. If the Micro SD is present in the camera, the LCD screen will display as shown in P-02. The display in the DV mode is as pictured in P-03 below.

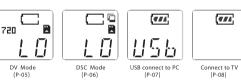

F/W upgrading (P-04)

F/W Upgrade Display When Using Micro SD Card: The LCD display shows picture P-04 above.

When the battery is low, the LCD display in Video mode will display like picture P-05. When it is in Camera mode, it will display as shown in P-06. When no bars remain, it will beep 3 times and the word "LO" flashes on the screen, and the LED light will flash red. After it stops beeping, the battery icon will begin to flash.

When the battery is about to cut off, the camera will beep 9-12 times. At this time, the video document that is in the process of recording will be saved before the power is cut off, and the document will be able to be played normally.

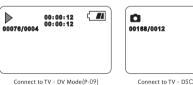

USB connection mode

When the USB is used to connect the camera to the computer, the LCD display will display as shown in P-07. You may access or move the photos and video files in the camera to the computer. At this time, the battery is also simultaneously charging.

HDMI connection mode

When an HDMI cable is used to connect to the TV, the LCD display will display as shown in P-08. The TV will display as shown in P-09.

When the camera is on, connect it to the TV via the HDMI cable. The camera will play When the Camera is on, connect it to the IV via the HDMI cable. The Camera will play the first video automatically and stop after this video is completed. Then, press the shutter button to play the next video, or press the mode button to play the previous video. If you would like to switch to photo mode, press and hold the mode button for 3 seconds. When in photo mode, it will show the first photo automatically. Press the shutter button to advance to the next photo, or press the mode button to display the previous photo. To switch back to the video display, press and hold the mode button for 3 seconds.

Connect to TV - DSC Mode(P-10)

The TV screen will show the Digital Video playback icon, the battery symbol, the video file number/total number of videos, and the playing time/total time. Picture P-10 is what will be displayed on the TV when connected in photo viewing mode. It will show the picture file number/ total file number and the battery symbol.

Only turn the camera off after it has been disconnected from the HDMI cable, as it will not turn off while still connected to the TV.

When the camera is connected to both the computer and TV at the same time it will override to the MSDC mode, and the LCD screen will display "USB".

Wifi icon flashes

beep sounds.

While charging, the battery symbol will show the animation of the battery charging, and the camera will shut down automatically when it has reached a full charge. If you wish to use the camera while it is charging, you can press the shutter button to switch to the 720p mode. Charging will pause and you will be able to use the camera normally While charging, the LCD screen will display as in

erproof housing for the Ego HD can variety of environments. The flat adhesive mount connects directly to the base of the housing and allows you a great amount of versatility and mounting options.

Protective Face Cover Assembly:

Please use care to follow the correct installation steps for the waterproof housing to avoid damage to the camera from immersion.

1. Keep the sticking area clean.

- The flat adhesive mount needs to attach to a smooth surface.
- Apply the adhesive mount at room temperature. Let the mount air-dry for 24 hours before use.

WiFi application

Software installation

You can download and install the "Actionconnect" Application (App) from the Apple Store or Android marketplace. You will be able to see the icon for the application as shown in P-A

Turn on the WiFi to your iOS/Android device and choose the network named "EGO". (shown in picture P-B)

Click the Action Connect icon, and activate the program to enter the software operation (as the picture P-C).

Setting
Click the setting icon to enter the setting list, the user can choose the relative setting choice. (As the picture P-D/P-E/P-F below)

Setting list (P-D)

Time Setting (P-F)

WIFI MODE setting
Click the setting "WiFi Mode", and here the user can modify the name of the SSID. The default SSID for the camera is "EGO". If you would like to set the password, choose the Security option to select WAP2 password protection. Then, choose a password, and press finish. The SSID you choose must be between 1-32 characters without "/" and the password must be between 1-37. The WiFl setting will be activated after the EGO reboots, and you should see your new SSID name in the list of wireless networks (As shown in picture P-G below)

Thank you for choosing Liquid Image products! This camera is designed to be the most versatile and compact camera designed for recording your favorite outdoor activities. If you have any questions or concerns, please do not hesitate to contact our customer support team.

Commonly asked questions and troubleshooting

1. If the connection between your Ego camera and iOS/Android devices is not

- valiable, try the following steps: Start the app (Action Connect) and go into the "Settings" from apps main menu, navigate to WiFi Setting/Client, if your phone is iPhone, select "IPhone" here, if your phone is Android powered, select "Android" here, after the setup, you need to restart your camera to make the setting activated and stored on the camera (Note: by default, the camera is using "Android" protocol, therefore you can omit this step if you are using Android-powered phone, if you are using Apple device, you need to do this step by only one time, the setup will be recorded in the camera after you restart it). Check whether you have Micro SD inside the camera, Wifi will not function properly if no Micro SD card present.

 Check whether the WiFi icon on the LCD is solid, if the icon is blinking, pressand hold "Record" key for 2's till a long bean is heard, which means the WiFi.
- and hold "Record" key for 2s till a long beep is heard, which means the WiFi on the camera is activated (Note: if you start recording, WiFi will be auton atically turned off)
- Go to your phone settings and check which WiFi device (SSID) is connected with your phone, by default, the camera will show as "EGO" in the Phone's Settings/WiFi/network list (You are able to change the name of your camera with the "Action connect" application.), if you see the name "EGO" there, try to connect with it.
- + After above steps are executed, enable the Camera WiFi as step 1, connect the phone to camera as step 2, then start apps and go into "Shoot", you should see what the camera sees from the phone.

- Why I can't see the live view in the apps "Shoot" menu
 Firstly go through above troubleshooting and make sure all of them are
- properly configured.
 if it's still not working, please try the following steps
- Power the camera off and then on
- Power the camera off and then on.
 Enable the WiFi by pressing and holding "Record" button till a "Beep" sounded.
 On the phone, Exit from the app then open it again, on the main menu, go into "Settings" to see whether you can get data from the camera, and make sure the WiFi Mode/Client is properly setup.
 In the apps, back to Home, go into "Shoot", then you should see what Camera

- 3. If the camera is no longer working, try the following steps.

 + Reset the camera by pressing the "Reset" button, which is located nearby the Micro SD slot.

 (1) A second of the camera is no longer working, try the following steps.

 (2) A second of the camera is no longer working, try the following steps.

 (3) A second of the camera is no longer working, try the following steps.

 (4) A second of the camera is no longer working, try the following steps.

 (5) A second of the camera by pressing the "Reset" button, which is located nearby the following steps.

 (6) A second of the camera by pressing the "Reset" button, which is located nearby the following steps.
- the Micro SD slot.

 Charge the camera with a wall adaptor (Note: if the battery is deeply camera to the wall adaptor will not wake exhausted, connecting the camera to the wall adaptor will not wake up it automatically, in this case, please manually press the "Power" button to wake up the camera then it will enter into Charging mode.

4. What I should do if the Camera shows "Hot" on the LCD

what I should do it the Camera shows. Hot on the ECD Nothing needs to be done specially, the message just tell you the camera is under heavy loading and becomes too hot to operate in its best, it will automatically stop recording and cool down itself, no need to worry, the camera will protect itself properly, no damage has happened on your camera.

- Check whether there have "FUL" on LCD when trying to record, as it indicates
- Check whether there have FOL on LCD when trying to record, as it in the memory is full. Check whether "Hot" is displayed on the LCD which indicates that the camera is overloaded and needs to cool down

6. What I should do if the camera shows "Sos" on the LCD

+ It could happen when you start the camera, which means some of videos you previously recorded are corrupted for some reason, if this message appears, press any button on the camera and the camera will attempt to repair the corrupted files by itself.

7. Why are there two versions of the videos that I record; in two different

+ This camera will record 2 videos when you press record button every time, one video is in the resolution exactly following your selection, either 720p @60 or 1080p@30, and another video in WQVGA (432 * 240) is used for WiFi

8. Why can't my Android powered phone play the videos properly

+ The video format(MOV) taken by the camera is not the core media format supported by Android, you need to install a Android Media player on your phone in advance, which you can find a lot from "Google Play
