Do not mix memory kits to run together. System failure may occur. Memory kits will be subject to the BIOS to reach the rated speed. Reaching the rated speed is subject to the BIOS on the compatibility of the memory kit. Usage in any manner that causes damage to the system or its components. For more information, please visit www.gskill.com.

For best performance, please use the XMP 3.0 profile in the BIOS. System stability will depend on the motherboard, CPU, and other components. Please refer to the motherboard manual for more information.

Matched kits that are designed to run together will result in stability issues or system failure. Please refer to the motherboard manual for more information.

BIOS settings with compatible memory kits will result in stability issues or system failure. Please refer to the motherboard manual for more information.

For more information, please visit www.gskill.com.
