

Decibullz DIY Thermo-fit Molded Earpieces combine with cutting edge impulse filter technology. Decibullz Filters protect users hearing from gun-shots, artillery-fire, and explosions*. Custom molding is easy, simply warm the earpieces in water and shape to your ears. The earpieces can even be re-heated and re-shaped if needed. Unlike electronic hearing protection Decibullz Filters never need batteries.

* Effectiveness of hearing protection depends 100% on how earpieces are fit to the ear by the user. Test earplug effectiveness thoroughly before use in loud and potentially damaging environments.
