* When plastering the ceiling after installation use 2-4 mm stick out the ceiling. This depends on the plaster thickness. Please discuss with your plasterer. For example, when plaster will be 3mm thick, the trimless frame should stick out 3mm. After plaster it will be 0mm (frame / ceiling will be flat surface.)

* If the ceiling is already plastered, stick out 0mm and fill the gap between the ceiling and frame with fast-plaster.

If you have questions about installation feel free to contact us, we will assist you!
