3D MAGNETIC TILES

NOW WITH

## Clickins

Tiles That Click into Tiles that Stick

Explore, discover & imagine with Playmags!

Playmags™ building blocks are unique! The magnets attract on all sides, even when flipped around. The new line of Clickins offers a whole new dimension of contemporary brain-building skill sets. With manipulation of these colorful pieces, children will effortlessly learn through creative play about geometric shapes, symmetry, architecture, word building, and basic math concepts such as counting, addition and subtraction. The novel concept of adding letters adds an original and fun way to develop sentence and word recognition skills while providing hours of pleasurable entertainment. The new window Clickins pose for more variety in creative structure building with a realistic touch.

Place the pieces together on a flat surface to make designs. Build a cube with six squares and notice how the first two pieces placed next to each other create instant support and allow additional pieces to be added easily. Label the cubes appropriately letting your creativity flow.

Play is the primary mode of learning for children. Young children love discovering mathematical concepts in the world around them. When a child has the opportunity to take flat objects and successfully construct 3D projects from them, the sense of discovery is very exciting and empowering.

This toy offers hours and hours of fun - children can build various projects and their imagination go wild with ideas.

Create cubes, houses, airplanes, cars, fish and so much more!
