

Privacy & Security Statement

Item name: Smart Watch Devices

Effective Date: 2026

1. Device Connection Security

We guarantee a secure and exclusive connection environment. Once a mobile device is successfully paired and connected to the smart watch via encrypted Bluetooth technology, no other mobile devices will be authorized to establish a connection to the same watch simultaneously. This establishes a one-to-one, secure communication link, effectively preventing unauthorized access and ensuring the integrity of data transmission.

2. Local Data Storage Principle

We strictly adhere to the "Local Storage Only" policy. The vast majority of your private data, including application data, message logs, photos, and personal sensitive content, is stored exclusively on your local mobile device and the smart watch. No data will be automatically uploaded to remote servers or unknown cloud platforms without your explicit prior authorization.

3. Data Collection & Usage Compliance

We are committed to protecting your personal privacy.

- **No Unauthorized Collection:** We do not collect, access, or process any personal photos, messages, call logs, or sensitive private information without your clear consent.

- **No Unauthorized Disclosure:** Under no circumstances will we share, transfer, sell, or disclose your personal information to third-party organizations, competitors, or individuals, except as required by law or with your written permission.
- **Minimal Data Necessity:** Data processing is limited to the scope necessary for providing core product functions (e.g., device pairing, real-time synchronization). We minimize data collection to the greatest extent possible.

4. User Rights & Assurance

You can use our smart watch with full confidence. We maintain industry-standard security measures, including end-to-end encryption, access permission controls, and local data isolation mechanisms, to comprehensively safeguard your personal information and privacy rights. We are dedicated to maintaining the highest standards of data security and user trust.

Commitment: This statement is effective upon release. We strictly abide by the commitments herein and continuously improve our security measures to protect your interests.
