

SIZE GUIDE

How to check for the right size:

1. Check the size of the helmet. Our helmets ranges from 49-61 cm.
2. Measure the size of the head, by using a measuring tape. If you dont have this, use a string and measure the string on a regular ruler afterwards.

Before you start to use the helmet, make sure to adjust the straps so that the helmet is safely fastened and comfortable to wear.

The size of the Crazy Safety helmets corresponds to the circumference of your head! You can use a tape measure positioning it just above the ears, and taking note of the measurement in centimetres.

Every helmet has its own size, so make sure you check the size before buying.
