

The Origin of Species

# EVOLUTION

A POPULAR SCIENCE BOARD GAME

## NEW WORLD

In Evolution: New World, you'll create unique animal species and endow them with useful traits that help them adapt to their natural habitat. Over the course of six gruelling epochs, you'll seek shelter from predators, gather food from Area cards, and even transform your animals into predators themselves to feast on unprotected prey.

Will your animals adapt and thrive? Or will they fall victim to an ever-changing world and become extinct?

Their survival is in your hands!

Create a new animal **OR** add a trait to an existing one

Feed from an Area

Search for shelter

Attack with a Predator

### Evolve to win!
