

EVOLVE™ O X Y G E N

Evolve Oxygen™ is a conveniently sized container of cooled, high-purity, breathable oxygen to aid in the recovery from a variety of physiologically stressed or impaired conditions; to revitalize during periods of physical exertion or mental lethargy, and to stimulate the body at times when peak performance is required.

Why Use Oxygen?

Oxygen is humanity's element of life; without it we are nothing. With a deficiency, we are lethargic and unable to fulfil our potential. With full saturation, we can be mentally and physically alert with a sense of vigor and well-being.

Who Should Use It?

- Athletes - Professional or Amateur
- Fitness enthusiasts
- Skiers/snowboarders
- Hikers
- People affected by pollution
- Singers
- Students
- Seniors
- Sleepy drivers
- Air travellers - Jet lag
- **Anyone short of breath!**

What makes Oxygen Evolve™ special?

Evolve Oxygen contains and delivers more than twice the quantity of oxygen compared to all other canned oxygen products. This is because each canister contains activated carbon as an adsorbent, which has a remarkable ability to store oxygen owing to its unique pore structure and high surface area. Derived from sustainable coconut shells, the activated carbon contains tiny micropores on which the oxygen molecules are physically adsorbed by intermolecular interactions known as van der Waals forces. Activated carbon thus provides a safe and convenient means of storing oxygen that can be easily released when needed.

But the advantages of this system do not end there, because the activated carbon manufacturing process effectively locks away atmospheric carbon dioxide as elemental carbon and prevents its return to the atmosphere.

This enables Evolve Oxygen™, uniquely, to have a negative carbon footprint making for an overall positive contribution to the environment.

How To Use in 4 Easy Steps

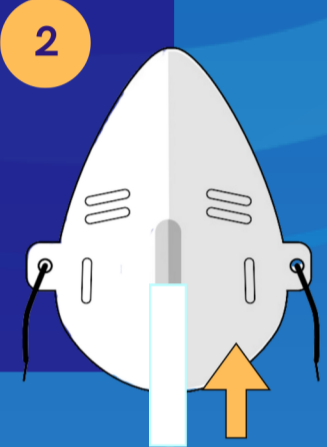

1 Remove Packaging

Take the Evolve Oxygen canister from the box. Remove the protective, plastic film taking care not to damage the can or other components. Recycle the box and protective film.

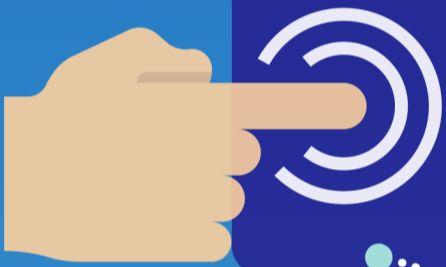

2 Assemble Mask & Tube

Take the mask out of the hygienic, sealed bag. Take note of the instructions within the mask bag. Push the tubing on to the actuator spout and on to the mask ensuring a good, tight fit.

3 Press Button or Trigger

Place the medical mask over your nose and mouth & tighten the draw strings on the mask to provide a comfortable fit. Take the safety cap off the top actuator and press the push button. **Inhale.**

4 Inhale Through Mouth

Once the oxygen is released take a breath. To get the most out of your Evolve Oxygen[™] canister moderate the flow by using finger pressure and release button/trigger when not inhaling.

Recommended Usage

- 4-8 breaths before or after exercise.
- 2-4 breaths every 20 minutes for high altitude and recovery (or as needed).
- 8+ breaths to help recovery from hangovers.

Please note: The canister will still feel full after the oxygen has been discharged.

Disposal of the Used Canister

Used Evolve Oxygen[™] canisters are 100% recyclable. Dispose of the discharged Evolve Oxygen[™] canister in the recycle bin.
