

Overview SecurePoint NB-930-AR 230Vac Carbon Monoxide Detector

SecurePoint NB-930-AR 230Vac Carbon Monoxide Detector.

The detector continuously monitors whether carbon monoxide is released due to incomplete combustion in the environment.

For example, poorly maintained gas stoves, central heating boilers and geysers can experience incomplete combustion.

The danger of carbon monoxide is that you cannot smell it. Therefore, for everyone's safety, this detector will have to be installed in the home. After carbon monoxide is detected, the detector emits a signal via the built-in piezoelectric buzzer.

The function of the detector can easily be tested regularly with the test button.

The sensor has the option for backup batteries (not included). 3 AAA batteries ensure that the sensor functions if the power supply fails. This makes the system extra safe.

Characteristics

- Test number: EN 50291 standard
- CO alarm level: 50 ppm / 60-90 minutes, 100 ppm / 10-40 minutes, 300 ppm / within 3 minutes
- Other: Built-in buzzer 85 dB at 3 m
- Voltage/Current: 230 Vdc 5W
- Colour White
- Operating temperature: -10 to 49 °C55
- Dimensions (hxwxd): 80 x 140 x 46mm
- Brand: SecurePoint Wizmart
