## FEATURES

The centre conductor is made of 19 strands with each a 150 micron diameter.

The shielding is made of 40 3T conductors combined with 2 layers of multiple, heavy silver coated, high quality copper strands.

In combination with the extra Linear Structured Carbon (L.S.C.) layer around the centre core, we have applied two very innovative (Hybrid) technologies together to open doors to the highest quality in musical experiences.

Our exclusive 3T technology gives you a much higher resolution and richer detail compared to any other metal technology used so far.
