## 1. TEST STANDARDS

## The tests were performed according to following standards:

EN 55032: 2015+A11: 2020 Electromagnetic compatibility of multimedia equipment - Emission

## **Requirements**

EN 55035: 2017+A11: 2020 Electromagnetic compatibility of multimedia equipment – Immunity

requirements

## 2.SUMMARY OF STANDARDS AND RESULTS

## 2.1. Description of Standards and Results

The EUT have been tested according to the applicable standards as referenced below.

| Emission (EN 55032: 2015+A11: 2020)                     |                                |                         |         |  |

## 2.2. Description of Performance Criteria

#### General Performance Criteria

Examples of functions defined by the manufacturer to be evaluated during testing include, but are not limited to, the following: — essential operational modes and states;

## 2.2.1. Performance criterion A

The equipment shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed below a performance level specified by the manufacture when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, then either of these may be deriver from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.

## 2.2.2. Performance criterion B

After the test, the equipment shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed, after the application of the phenomena below a performance level specified by the manufacture, when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance.

During the test, degradation of performance is allowed. However, no change of operation state or stored data is allowed to persist after the test.

If the minimum performance level (or the permissible performance loss) is not specified by the manufacturer, then either of these may be deriver from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.

## 2.2.3. Performance criterion C

Loss of function is allowed, provided the function is self-recoverable, or can be restored by the operation of the controls by the user in accordance with the manufacture's instructions.

Functions, and/or information stored in non-volatile memory, or protected by a battery backup, shall not be loss.

#### Report No.: LCS201228115AE

## **3. GENERAL INFORMATION**

## 3.1. Description of Device (EUT)

| EUT               | : portable emergency car starting power supply  |
|-------------------|---|
| Trade Mark        | : N/A   |
| Test Model        | : Q9B   |
| Additional Model  | : Jstar One, Nw100, Q10S, AL-JPZOB, Q9C, Q9S, Q10B  |
| Model Declaration | : PCB board, structure and internal of these model(s) are the sa  |
| Power Supply      | <ul> <li>Peak Current: 2500A</li> <li>Capacity: 81.4Wh</li> <li>Type-C Input: 5V=2A, 9V=2A, 12V=1.5A</li> <li>USB 1:5V=3A, 9V=2A, 12V1.5A</li> <li>USB 2: 5V=2.1A</li> <li>DC Output:12V=10A</li> </ul> |

| Highest internal frequency (Fx)   | Highest measured frequency      |  |
|---|---------------------------------|--|
| Fx ≤ 108 MHz  | 1 GHz                           |  |
| 108 MHz < Fx ≤ 500 MHz  | 2 GHz                           |  |
| 500 MHz < Fx ≤ 1 GHz  | 5 GHz                           |  |
| Fx > 1 GHz  | 5 × Fx up to a maximum of 6 GHz |  |
| NOTE 1 For FM and TV broadcast receivers. Fx is determined from the highest frequency |                                 |  |

NOTE 1 For FM and TV broadcast receivers, Fx is determined from the highest frequency generated or used excluding the local oscillator and tuned frequencies. NOTE 2 Fx is defined in EN 55032 Section 3.1.19. Where Fx is unknown, the radiated emission measurements shall be performed up to 6 GHz.

## 3.2. Support Equipment List

| Name | Manufacturers | M/N | S/N |
|------|---------------|-----|-----|
|      |               |     |     |

## 3.3. Description of Test Facility

NVLAP Accreditation Code is 600167-0. FCC Designation Number is CN5024. CAB identifier is CN0071. CNAS Registration Number is L4595.

## 3.4. Statement of The Measurement Uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. To CISPR 16 – 4 "Specification for radio disturbance and immunity measuring apparatus and methods – Part 4: Uncertainty in EMC Measurements" and is documented in the LCS quality system acc. To DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

| Test   | Parameters  | Expanded<br>Uncertainty (U <sub>lab</sub> ) | Expanded<br>Uncertainty (U <sub>cispr</sub> ) |
|--|---|---|---|
| Conducted Emission                               | Level accuracy<br>(9kHz to 150kHz)<br>(150kHz to 30MHz) | $\pm$ 2.63 dB $\pm$ 2.35 dB                 | $\pm$ 3.8 dB $\pm$ 3.4 dB                     |
| Power Disturbance                                | Level accuracy<br>(30MHz to 300MHz)                     | $\pm$ 2.90dB                                | $\pm$ 4.5 dB                                  |
| Electromagnetic<br>Radiated Emission<br>(3-loop) | Level accuracy<br>(9kHz to 30MHz)                       | $\pm$ 3.60 dB                               | ± 3.3 dB                                      |
| Radiated Emission                                | Level accuracy<br>(9kHz to 30MHz)                       | $\pm$ 3.68 dB                               | N/A   |
| Radiated Emission                                | Level accuracy<br>(30MHz to 1000MHz)                    | $\pm$ 3.48 dB                               | $\pm$ 5.3 dB                                  |
| Radiated Emission                                | Level accuracy<br>(above 1000MHz)                       | $\pm$ 3.90 dB                               | $\pm$ 5.2 dB                                  |
| Mains Harmonic                                   | Voltage   | $\pm 0.510\%$                               | N/A   |
| Voltage Fluctuations<br>& Flicker                | Voltage   | ± 0.510%                                    | N/A   |

## 3.5. Measurement Uncertainty

1) Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus.

2) The reported expanded uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor of k=2, which for a normal distribution corresponds to a coverage probability of approximately 95%.

## 4. MEASURING DEVICES AND TEST EQUIPMENT

Below 1GHz

Above 1GHz

## 5.1.2. Test Standard

## EN 55032: 2015+A11: 2020 Class B

All emanations from a class B device or system, including any network of conductors and apparatus connected thereto, shall not exceed the level of field strengths specified below:

| Limit      | s for Radiated Emission Below 10 | GHz                   |
|------------|----------------------------------|-----------------------|
| Frequency  | Distance                         | Field Strengths Limit |
| (MHz)      | (Meters)                         | (dBµV/m)              |
| 30 ~ 230   | 3                                | 40                    |
| 230 ~ 1000 | 3                                | 47                    |

\*\*\*Note:

(1) The smaller limit shall apply at the combination point between two frequency bands.(2) Distance refers to the distance in meters between the measuring instrument antenna and the closed point of any part of the EUT.

|                           | Limits for Radiated E | mission Above 1GHz |               |

\*\*\*Note: The lower limit applies at the transition frequency.

#### 5.1.3. EUT Configuration on Test

The EN 55032 regulations test method must be used to find the maximum emission during emission measurement.

## 5.1.4. Operating Condition of EUT

- 5.1.4.1. Turn on the power.
- 5.1.4.2. Let the EUT work in the test mode 1 and measure it.

## 5.1.5. Test Procedure

The EUT is placed on a turntable, which is 0.8 meter high above the ground. The turntable can rotate 360 degrees to determine the position of the maximum emission level. The EUT is set 3 meters away from the receiving antenna, which is mounted on a antenna tower. The antenna can be moved up and down from 1 to 4 meters to find out the maximum emission level. By-log antenna is used as a receiving antenna. Both horizontal and vertical polarization of the antenna is set on test.

The bandwidth of the EMI test receiver is set at RBW/VBW=120kHz/300kHz.

The frequency range from 30MHz to 1000MHz is checked.

The bandwidth of the Spectrum analyzer is set at RBW/VBW=1MHz/3MHz.

The frequency range from 1GHz to the frequency which about 5th carrier harmonic or 6GHz is checked.

## 5.1.6. Test Results

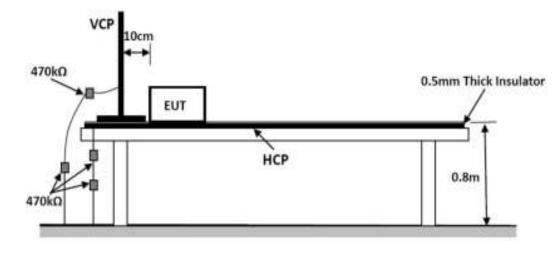

## PASS.

Refer to attached Annex B.1

This report shall not be reproduced except in full, without the written approval of Shenzhen LCS Compliance Testing Laboratory Ltd. Page 13 of 33

## 5.2. ELECTROSTATIC DISCHARGE IMMUNITY TEST

### 5.2.1. Block Diagram of Test Setup

#### 5.2.2. Test Standard

EN 55035: 2017+A11: 2020 (EN 61000-4-2: 2009, Severity Level: 3 / Air Discharge: ±8KV, Level: 2 / Contact Discharge: ±4KV)

#### 5.2.3. Severity Levels and Performance Criterion

| L evel | Test Voltage           | Test Voltage       |
|--------|------------------------|--------------------|
| Level  | Contact Discharge (KV) | Air Discharge (KV) |
| 1      | ±2                     | ±2                 |
| 2      | ±4                     | ±4                 |
| 3      | ±6                     | ±8                 |
| 4      | ±8                     | ±15                |
| X      | Special                | Special            |

#### 5.2.3.1. Severity level

5.2.3.2. Performance Criterion Performance Criterion: B

#### 5.2.4. EUT Configuration on Test

The configuration of EUT is listed in Section 5.2.1.

#### 5.2.5. Operating Condition of EUT

Same as radiated emission measurement, which is listed in Section 5.1.4. Except the test set up replaced by Section 5.2.1.

### 5.2.6. Test Procedure

#### 5.2.6.1. Air Discharge

This test is done on a non-conductive surfaces. The round discharge tip of the Electrostatic Discharge simulator shall be approached as fast as possible then to touch the EUT. After each discharge, the simulator shall be removed from the EUT. The simulator is then re-triggered for a new single discharge and repeated 10 times for each pre-selected test point. This procedure shall be repeated until all the air discharge completed

## 5.2.6.2. Contact Discharge

All the procedure shall be same as air discharge, except using the acute discharge tip. The top end of the Electrostatic Discharge simulator is touch the EUT all the time when the simulator is re-triggered for a new single discharge and repeated 10 times for each pre-selected test point.

## 5.2.6.3. Indirect Discharge For Horizontal Coupling Plane

The vertical coupling plane(VCP) is placed 0.1m away from EUT. The top end of Electrostatic Discharge simulator should aim at the center of one border of the VCP for at least 25 times discharge.

## 5.2.6.4. Indirect Discharge For Vertical Coupling Plane

The top end of Electrostatic Discharge simulator should place at the point 0.1m away from EUT on the horizontal coupling plane(HCP). At least 25 times discharge should be done for every pre-selected point around EUT.

Record any performance degradation of the EUT during the test and judge the test result according to ce criterion.

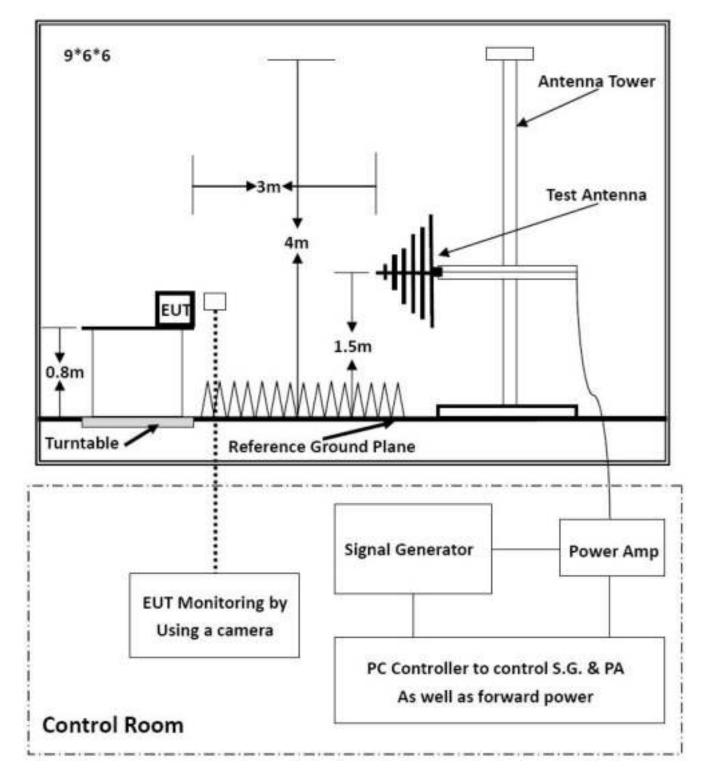

## 5.2.7. Test Results

## PASS.

Refer to attached Annex B.2

## 5.3. RF FIELD STRENGTH SUSCEPTIBILITY TEST

#### 5.3.1. Block Diagram of Test Setup

This report shall not be reproduced except in full, without the written approval of Shenzhen LCS Compliance Testing Laboratory Ltd. Page 16 of 33

## 5.3.2. Test Standard

EN 55035: 2017+A11: 2020 (EN 61000-4-3: 2006+A2: 2010 Severity Level: 2, 3V/m)

## 5.3.3. Severity Levels and Performance Criterion

## 5.3.3.1. Severity level

| Level | Field Strength (V/m) |
|-------|----------------------|
| 1     | 1                    |
| 2     | 3                    |
| 3     | 10                   |
| X     | Special              |

5.3.3.2. Performance Criterion Performance Criterion: A

## 5.3.4. EUT Configuration on Test

The configuration of EUT is listed in Section 5.3.1.

## 5.3.5. Operating Condition of EUT

Same as radiated emission measurement, which is listed in Section 5.1.4, except the test setup replaced as Section 5.3.1.

## 5.3.6. Test Procedure

The EUT are placed on a table, which is 0.8 meter high above the ground. The EUT is set 3 meters away from the transmitting antenna, which is mounted on an antenna tower. Both horizontal and vertical polarization of the antenna is set on test. Each of the four sides of the EUT must be faced this transmitting antenna and measured individually. In order to judge the EUT performance, a CCD Recording is used to monitor its screen. All the scanning conditions are as following:

| Condition of Test                 | Remark                             |
|-----------------------------------|------------------------------------|
| Fielded Strength                  | 3 V/m (Severity Level 2)           |
| Radiated Signal                   | Unmodulated                        |
| Test Frequency Range (Swept Test) | 80-1000MHz                         |
| Test Frequency (spot test)        | 1800MHz, 2600MHz, 3500MHz, 5000MHz |
| Dwell Time of Radiated            | 0.0015 decade/s                    |
| Waiting Time                      | 3 Sec.                             |

## 5.3.7. Test Results

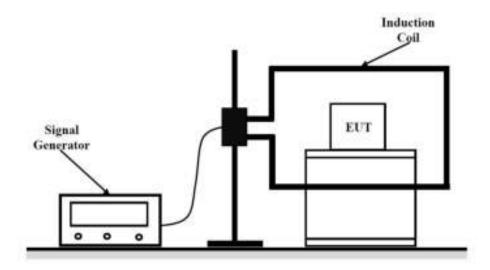

## PASS.

Refer to attached Annex B.3

Report No.: LCS201228115AE

## 5.4. MAGNETIC FIELD SUSCEPTIBILITY TEST

## 5.4.1. Block Diagram of Test Setup

#### 5.4.2. Test Standard

EN 55035: 2017+A11: 2020 (EN 61000-4-8: 2010, Severity Level: Level 1, 1A/m)

## 5.4.3. Severity Levels and Performance Criterion

| 5.4.3.1. | Severity | level |
|----------|----------|-------|
| 0.1.0.1. | 0010110  | 10101 |

| Level | Field Strength (A/m) |
|-------|----------------------|
| 1     | 1                    |
| 2     | 3                    |
| 3     | 10                   |
| 4     | 30                   |
| 5     | 100                  |
| X     | Special              |

5.4.3.2. Performance Criterion Performance Criterion: A

## 5.4.4. EUT Configuration on Test

The configuration of EUT is listed in Section 5.4.1.

## 5.4.5. Test Procedure

EUT is placed on an insulating support of 0.1m high above a table of 0.8m high. There is a minimum 1m\*1m ground metallic plane put on this table. EUT is put in the center of the magnetic coil then two orientations of the magnetic coil, horizontal and vertical, shall be rotated in order to expose the EUT to the difference polarization magnetic field. Record any performance degradation of the EUT during the test and judge the test result according to performance criterion.

## 5.4.6. Test Results

#### PASS.

Refer to attached Annex B.4
